

CHAPTER 15

SNMP V1/V2c Configuration

This chapter, which describes how to configure SNMP versions 1 and 2c so the network management system can monitor Cisco Unified CallManager, contains the following topics:

- [Finding a Community String, page 15-1](#)
- [Configuring a Community String, page 15-2](#)
- [Community String Configuration Settings, page 15-3](#)
- [Deleting a Community String, page 15-4](#)
- [Finding a Notification Destination, page 15-5](#)
- [Configuring a Notification Destination for V1/V2c, page 15-5](#)
- [Notification Destination Configuration Settings for V1/V2c, page 15-6](#)
- [Deleting a Notification Destination, page 15-7](#)
- [Related Topics, page 15-8](#)

If you use SNMP version 3, see the “[SNMP V3 Configuration](#)” section on page 16-1.

Finding a Community String

The Add New button does not display in the SNMP Community String Configuration window until you click the Find button. If no community strings exist and you want to add want a community string, click the **Find** button and wait for the window to refresh. The Add New button displays.

To find a community string, perform the following procedure:

Procedure

Step 1 Choose **Snmp > V1/V2c > Community String**.

The Find/List window displays.

Step 2 From the Find Community Strings where Name drop-down list box, choose the specific search criteria that you want to use for the community string.

Step 3 Enter the community string for which you want to search.

Configuring a Community String

- Step 4** In the Server field, enter the hostname or IP address of the server where the community string exists.
- Step 5** Click **Find**.
- After you click the Find button, the Add New button displays. After the search results display, the **Apply to All Nodes** check box displays.
- Step 6** If you want to apply the configuration from one of the options in the search results to all nodes in the cluster, check the check box next to the name of the option and check the **Apply to All Nodes** check box.
- Step 7** From the list of results, click the community string that you want to view.
- Step 8** To add or update a community string, see the “[Configuring a Community String](#)” section on page 15-2.

Additional Information

See the “[Related Topics](#)” section on page 15-8.

Configuring a Community String

Because the SNMP agent provides security by using community strings, you must configure the community string to access any management information base (MIB) in a Cisco Unified CallManager system. Change the community string to limit access to the Cisco Unified CallManager system. To add, modify, and delete community strings, access the SNMP Community String configuration window.

Procedure

- Step 1** Perform the procedure in the “[Finding a Community String](#)” section on page 15-1.
- Step 2** Perform one of the following tasks:
- To add a new community string, click the **Add New** button and go to [Step 3](#).
 - To modify an existing community string, locate the community string, as described in the “[Finding a Community String](#)” section on page 15-1; click the name of the community string that you want to edit and go to [Step 3](#).
- You cannot change the name of the community string or the server for the community string.
- To delete a community string, see the “[Deleting a Community String](#)” section on page 15-4.
- Step 3** Enter the configuration settings, as described in [Table 15-1](#).

Tip If you are adding a new community string, you can click the **Clear All** button at any time to delete all information that you entered for all settings.

- Step 4** After you complete the configuration, click **Add New** to save a new community string or click **Save** to save changes to an existing community string.
- Step 5** A message indicates that changes will not take effect until you restart the SNMP master agent. To continue the configuration without restarting the SNMP master agent, click **Cancel**. To restart the SNMP master agent service, click **OK**.

Note Cisco recommends that you wait until you finish all the SNMP configuration before you restart the SNMP master agent service. For information on how to restart the service, see the “[Starting, Stopping, Restarting, and Refreshing Status of Services in Control Center](#)” section on page 2-2.

The system refreshes and displays the SNMP Community String Configuration window. The community string that you created displays in the window.

Additional Information

See the “[Related Topics](#)” section on page 15-8.

Community String Configuration Settings

Table 15-1 describes the community string configuration settings. For related procedures, see the “[Related Topics](#)” section on page 15-8.

Table 15-1 Community String Configuration Settings

Field	Description
Server	<p>This setting in the Community String configuration window displays as read only because you specified the server choice when you performed the procedure in the “Finding a Community String” section on page 15-1.</p> <p>To change the server for the community string, perform the procedure in the “Finding a Community String” section on page 15-1.</p>
Community String	<p>Enter a name for the community string. The name can contain up to 32 characters and can contain any combination of alphanumeric characters, hyphens (-), and underscore characters (_).</p> <p>Tip Choose community string names that will be hard for outsiders to figure out.</p> <p>When you edit a community string, you cannot change the name of the community string.</p>
Accept SNMP Packets from any host	To accept SNMP packets from any host, click this radio button.
Accept SNMP Packets only from these hosts	<p>To accept SNMP only from specified hosts, click this radio button.</p> <p>Tip In the Host IP Address field, enter a host from which you want to accept packets and click Insert. Repeat this process for each host from which you want to accept packets. To delete a host, choose that host from the Host IP Addresses list box and click Remove.</p>

Table 15-1 Community String Configuration Settings (continued)

Field	Description
Access Privileges	<p>From the drop-down list box, choose the appropriate access level from the following list:</p> <ul style="list-style-type: none"> • ReadOnly—The community string can only read the values of MIB objects. • ReadWrite—The community string can read and write the values of MIB objects. • ReadWriteNotify—The community string can read and write the values of MIB objects and send MIB object values for a trap and inform messages. • NotifyOnly—The community string can only send MIB object values for a trap and inform messages. • None—The community string cannot read, write, or send trap information. <p>Tip To change the Cisco Unified Presence trap configuration parameters, you need to use a community with NotifyOnly or ReadWriteNotify privileges.</p>
Apply To All Nodes	To apply the community string to all nodes in the cluster, check this check box.

Deleting a Community String

To delete a community string, perform the following procedure:

Procedure

-
- Step 1** Locate the community string, as described in the “[Finding a Community String](#)” section on page 15-1.
- Step 2** From the list of matching records, check the check box next to the community string that you want to delete.
- Step 3** Click **Delete Selected**.
- Step 4** A message indicates that the system will delete notification entries that relate to this community string. To continue the deletion, click **OK**.
- Step 5** A message indicates that changes will not take effect until you restart the SNMP master agent. To continue the configuration without restarting the SNMP master agent, click **Cancel**. To restart the SNMP master agent service, click **OK**.

Tip Cisco recommends that you wait until you finish all the SNMP configuration before you restart the SNMP master agent service. For information on how to restart the service, see the “[Starting, Stopping, Restarting, and Refreshing Status of Services in Control Center](#)” section on page 2-2.

After the window refreshes, the string that you deleted no longer displays in the results.

Additional Information

See the “[Related Topics](#)” section on page 15-8.

Finding a Notification Destination

**Tip**

The Add New button does not display in the SNMP Notification Destination Configuration window until you click the Find button. If no notification destinations exist and you want to add want a notification destination, click the **Find** button and wait for the window to refresh. The Add New button displays.

To find a notification destination for V1/V2c, perform the following procedure:

Procedure

Step 1 Choose **Snmp > V1/V2c > Notification Destination**.

The Find/List window displays.

Step 2 From the Find Notification where Destination IP drop-down list box, choose the specific search criteria that you want to use to find the notification destination.**Step 3** Enter the notification destination for which you want to search.**Step 4** In the Server field, enter the hostname or IP address of the server that supports the notification destination.**Step 5** Click **Find**.

After you click the Find button, the Add New button displays. After the search results display, the **Apply to All Nodes** check box displays.

Step 6 If you want to apply the configuration from one of the options in the search results to all nodes in the cluster, check the check box next to the name of the option and check the **Apply to All Nodes** check box.**Step 7** To view the configuration for one of the items in the search results, click the item.**Step 8** To add or update a notification string, see the “[Configuring a Notification Destination for V1/V2c](#)” section on page 15-5.

Additional Information

See the “[Related Topics](#)” section on page 15-8.

Configuring a Notification Destination for V1/V2c

To configure the notification destination (trap/inform receiver) for V1/V2c, perform the following procedure.

Procedure

Step 1 Perform the procedure in the “[Finding a Notification Destination](#)” section on page 15-5.

Notification Destination Configuration Settings for V1/V2c

Step 2 Perform one of the following tasks:

- To add a new SNMP notification destination, click the **Add New** button and go to [Step 3](#). You configure the notification destination for the server that you choose in the Server drop-down list box in the Find/List window.
- To modify an existing SNMP notification destination, locate the notification destination, as described in the “[Finding a Notification Destination](#)” section on page 15-5; click the name of the SNMP notification destination that you want to edit and go to [Step 3](#).
- To delete an SNMP notification destination, see the “[Deleting a Notification Destination](#)” section on page 15-7.

Step 3 Enter the configuration settings, as described in [Table 15-2](#).

**Tip**

If you are adding a new notification destination, you can click the **Clear** button at any time to delete all information that you entered for all settings.

Step 4 Click **Insert** to save a notification destination or click **Save** to save changes to an existing notification destination.

Step 5 A message indicates that changes will not take effect until you restart the SNMP master agent. To continue the configuration without restarting the SNMP master agent, click **Cancel**. To restart the SNMP master agent, click **OK**.

**Note**

Cisco recommends that you wait until you finish the SNMP configuration before you restart the SNMP master agent service. For information on how to restart the service, see the “[Starting, Stopping, Restarting, and Refreshing Status of Services in Control Center](#)” section on page 2-2.

Additional Information

See the “[Related Topics](#)” section on page 15-8.

Notification Destination Configuration Settings for V1/V2c

[Table 15-2](#) describes the notification destination configuration settings for V1/V2c. For related procedures, see the “[Related Topics](#)” section on page 15-8.

Table 15-2 *Notification Destination Configuration Settings for V1/V2*

Field	Description
Server	This setting displays as read only because you specified the server when you performed the procedure in the “ Finding a Notification Destination ” section on page 15-5. To change the server for the notification destination, perform the procedure in the “ Finding a Community String ” section on page 15-1.
Host IP Addresses	From the drop-down list box, choose the Host IP address of the trap destination or choose Add New . If you choose Add New, enter the IP address of the trap destination. For existing notification destinations, you cannot modify the host IP address configuration.
Port Number	In the field, enter the notification-receiving port number on the destination server that receives SNMP packets.
V1 or V2C	From the SNMP Version Information pane, click the appropriate SNMP version radio button, either V1 or V2C, which depends on the version of SNMP that you are using. <ul style="list-style-type: none"> • If you choose V1, configure the community string setting. • If you choose V2C, configure the notification type setting and then configure the community string.
Community String	From the drop-down list box, choose the community string name to be used in the notification messages that this host generates. Only community strings with minimum notify privileges (ReadWriteNotify or Notify Only) display. If you have not configured a community string with these privileges, no options appear in the drop-down list box. If necessary, click the Create New Community String button to create a community string, as described in the “ Configuring a Community String ” section on page 15-2.
Notification Type	From the drop-down list box, choose the appropriate notification type.
Apply To All Nodes	To apply the notification destination configuration to all nodes in the cluster, check this check box.

Deleting a Notification Destination

To delete a notification destination, perform the following procedure:

Procedure

-
- | | |
|---------------|---|
| Step 1 | Locate the notification destination, as described in the “ Finding a Notification Destination ” section on page 15-5. |
| Step 2 | From the list of matching records, check the check box next to the notification destination that you want to delete. |
| Step 3 | Click Delete Selected . |

Related Topics

- Step 4** A message asks whether you want to delete the notification entries. To continue the deletion, click **OK**.
- Step 5** A message indicates that changes will not take effect until you restart the SNMP master agent. To continue the configuration without restarting the SNMP master agent, click **Cancel**. To restart the SNMP master agent service, click **OK**.

**Tip**

Cisco recommends that you wait until you finish all the SNMP configuration before you restart the SNMP master agent service. For information on how to restart the service, see the “[Starting, Stopping, Restarting, and Refreshing Status of Services in Control Center](#)” section on page 2-2.

After the window refreshes, the notification destination that you deleted no longer displays in the results.

Additional Information

See the “[Related Topics](#)” section on page 15-8.
