**description (backup-schedule)**

# description (backup-schedule)

To configure a description for a scheduled backup job, use the **description** command in Cisco Unity Express scheduled backup configuration mode. Use the **no** form of this command to remove the description for the backup job.

**description “text”**

**no description “text”**

|                           |        |                                     |
|---------------------------|--------|-------------------------------------|
| <b>Syntax Description</b> | “text” | Describes the scheduled backup job. |
|---------------------------|--------|-------------------------------------|

|                        |       |
|------------------------|-------|
| <b>Command Default</b> | None. |
|------------------------|-------|

|                      |   |
|----------------------|---|
| <b>Command Modes</b> | Cisco Unity Express scheduled backup configuration (config-sched) |
|----------------------|---|

| <b>Command History</b> | <b>Cisco UMG Version</b> | <b>Modification</b>          |
|------------------------|--------------------------|------------------------------|
|                        | 8.0                      | This command was introduced. |

|                         |   |
|-------------------------|---|
| <b>Usage Guidelines</b> | The text of the description must be enclosed in quotes. |
|-------------------------|---|

The maximum length of the description is 64 characters. If a longer description is entered, it is truncated and a message is displayed indicating that truncation occurred.

|                 |  |
|-----------------|--|
| <b>Examples</b> | The following example configures a description for a daily scheduled backup: |
|-----------------|--|

```
umg-1# config t
umg-1(config)# backup schedule 22
umg-1(backup-schedule)# description "daily midnight backup"
```

| <b>Related Commands</b> | <b>Command</b>         | <b>Description</b>                              |
|-------------------------|------------------------|---|
|                         | <b>backup schedule</b> | Enters commands enters backup-schedule submode. |

# description (kron schedule)

To configure the description of the kron schedule, use the **description** command in Cisco Unity Express kron schedule configuration mode. Use the **no** form of this command to remove the description for the kron job.

**description "text"**

**no description**

|                           |                 |                         |
|---------------------------|-----------------|-------------------------|
| <b>Syntax Description</b> | " <i>text</i> " | Describes the kron job. |
|---------------------------|-----------------|-------------------------|

|                 |       |
|-----------------|-------|
| <b>Defaults</b> | None. |
|-----------------|-------|

|                      |                                       |
|----------------------|---------------------------------------|
| <b>Command Modes</b> | Cisco UMG kron schedule configuration |
|----------------------|---------------------------------------|

| <b>Command History</b> | <b>Cisco UMG Version</b> | <b>Modification</b>          |
|------------------------|--------------------------|------------------------------|
|                        | 8.0                      | This command was introduced. |

|                         |   |
|-------------------------|---|
| <b>Usage Guidelines</b> | The text of the description must be enclosed in quotes. |
|-------------------------|---|

The maximum length of the description is 64 characters. If a longer description is entered, it is truncated and a message is displayed indicating that truncation occurred.

|                 |  |
|-----------------|--|
| <b>Examples</b> | The following example configures the description of the kron schedule to "monday": |
|-----------------|--|

```
umg-1# config t
umg-1(config)# kron schedule kron1234
umg-1(kron-schedule)# description monday
```

| <b>Related Commands</b> | <b>Command</b>                                | <b>Description</b>   |
|-------------------------|---|--|
|                         | <a href="#">commands (kron schedule)</a>      | Enters the interactive mode to create the command block for a kron job.  |
|                         | <a href="#">kron schedule</a>                 | Creates a new kron schedule and enters kron-schedule configuration mode. |
|                         | <a href="#">show kron schedules</a>           | Displays a list of kron jobs.  |
|                         | <a href="#">show kron schedule detail job</a> | Displays details of a specific kron job.                                 |

**disabled (backup-schedule)**

# disabled (backup-schedule)

To configure a period time for the scheduled backup activity to be temporarily disabled, use the **disabled** command in Cisco Unity Express backup-schedule configuration mode. To remove the configured period of time to temporarily disable the backup, use the **no** form of this command.

**disabled from date to date**

**no disabled from date to date**

|                           |  |
|---------------------------|--|
| <b>Syntax Description</b> | <b>from date</b> Specifies the date from which the backup activity is temporarily disabled.<br>The format is MM/DD/YYYY.<br><b>until date</b> Specifies the date until which the backup activity is temporarily disabled.<br>The format is MM/DD/YYYY. |
|---------------------------|--|

|                 |             |
|-----------------|-------------|
| <b>Defaults</b> | No default. |
|-----------------|-------------|

|                      |   |
|----------------------|---|
| <b>Command Modes</b> | Cisco UMG backup-schedule configuration |

|                        | 8.0                      | This command was introduced. |

|                         |  |
|-------------------------|--|
| <b>Usage Guidelines</b> | The format for the date is month, day, and then year (for example: 05/302010). |
|-------------------------|--|

|                 |  |
|-----------------|--|
| <b>Examples</b> | The following example specifies to disable the scheduled backup from October 2, 2010 to October 6, 2010. |
|-----------------|--|

```
umg-1# config t
umg-1(config)# backup schedule name 22
umg-1(backup-schedule)# disabled from 10/02/2010 to 10/06/2010
```

| <b>Related Commands</b> | <b>Command</b>                  | <b>Description</b>                         |
|-------------------------|---------------------------------|--|
|                         | <a href="#">backup schedule</a> | Enters backup-schedule configuration mode. |

# disabled (kron-schedule)

To configure a period time for the scheduled cron job to be temporarily disabled, use the **disabled** command in Cisco Unity Express kron-schedule configuration mode. To remove the configured period of time to temporarily disable the cron job, use the **no** form of this command.

**disabled from date to date**

**no disabled from date to date**

|                           |  |
|---------------------------|--|
| <b>Syntax Description</b> | <b>from date</b> Specifies the date from which the cron job is temporarily disabled. The format is MM/DD/YYYY.<br><b>until date</b> Specifies the date until which the cron job is temporarily disabled. The format is MM/DD/YYYY. |
|---------------------------|--|

|                 |             |
|-----------------|-------------|
| <b>Defaults</b> | No default. |
|-----------------|-------------|

|                      |                                       |

|-------------------------|--|

|   |  |
|---|--|
| <b>Examples</b>   | The following example specifies to disable the scheduled cron job from October 2, 2010 to October 6, 2010: |
| <pre>umg-1# <b>kron schedule krj1</b> umg-1(kron-schedule)# <b>disabled from 10/02/2010 to 10/06/2010</b></pre> |  |

| <b>Related Commands</b> | <b>Command</b>                | <b>Description</b>                       |
|-------------------------|-------------------------------|--|
|                         | <a href="#">kron schedule</a> | Enters kron-schedule configuration mode. |

# domain

To provision the domain name of an endpoint to Cisco UMG, use the **domain** command in Cisco UMG endpoint configuration mode. To clear this configuration, use the **no** form of this command or precede the command with **default**, as in **default domain**.

**domain** *domain*

**no domain**

|                           |               |   |
|---------------------------|---------------|---|
| <b>Syntax Description</b> | <i>domain</i> | Domain name of the endpoint, for example, sj.mycompany.com. |
|---------------------------|---------------|---|

|                        |                                  |
|------------------------|----------------------------------|
| <b>Command Default</b> | The default domain name is none. |
|------------------------|----------------------------------|

|                      |  |
|----------------------|--|
| <b>Command Modes</b> | Cisco UMG endpoint configuration (config-endpoint) |
|----------------------|--|

| <b>Command History</b> | <b>Cisco UMG Version</b> | <b>Modification</b>          |
|------------------------|--------------------------|------------------------------|
|                        | 1.0                      | This command was introduced. |

|                         |  |
|-------------------------|--|
| <b>Usage Guidelines</b> | When you configure a domain for an endpoint, Cisco UMG does an MX lookup on the domain provided and uses those host addresses. |
|-------------------------|--|

|                 |   |
|-----------------|---|
| <b>Examples</b> | The following example shows how the domain name is set as part of the process of provisioning an endpoint to Cisco UMG: |
|-----------------|---|

```
umg-1> enable
umg-1# config t
umg-1(config)# endpoint 12345 unity
umg-1(config-endpoint)# domain sj.mycompany.com
umg-1(config-endpoint)# prefix 408902
umg-1(config-endpoint)# hostname unity-408
umg-1(config-endpoint)# end
umg-1(config)#
```

| <b>Related Commands</b> | <b>Command</b>                             | <b>Description</b>  |
|-------------------------|--|---|
|                         | <a href="#"><b>endpoint</b></a>            | Enters the endpoint configuration mode to provision endpoints manually. |
|                         | <a href="#"><b>hostname (endpoint)</b></a> | Specifies the hostname of an endpoint you are provisioning manually.    |
|                         | <a href="#"><b>prefix</b></a>              | Sets the phone number prefix of an endpoint.                            |
