

**Last Updated: November 17, 2010**

**ip domain-name**

**ip name-server**

# ip domain-name

To specify the local messaging gateway's domain name, use the **ip domain-name** command in Cisco UMG configuration mode. To clear the configuration, use the **no** form of this command.

**ip domain-name** *dns-server-domain-name*

**no ip domain-name** *company.com*

<b>Syntax Description</b>	<i>dns-server-domain-name</i> Domain name for local Cisco UMG.
---------------------------	--

<b>Command Modes</b>	Cisco UMG configuration (config)
----------------------	----------------------------------

<b>Command History</b>	<b>Cisco UMG Version</b>	<b>Modification</b>
	1.0	This command was introduced.

<b>Examples</b>	The following example illustrates the use of the <b>ip domain-name</b> command:
-----------------	---

```
umg-1# config t
umg-1(config)# ip domain-name mycompany.com
umg-1(config)# ip name-server dns1.mycompany.com
umg-1(config)# end
umg-1# show hosts
Hostname:      umg-1
Domain:        mycompany.com
[...]
umg-1#
```

<b>Related Commands</b>	<b>Command</b>	<b>Description</b>
	<a href="#">show hosts</a>	Displays details for the current configuring messaging gateway.

# ip name-server

To specify the local messaging gateway's domain name server, use the **ip name-server** command in Cisco UMG configuration mode. To clear the configuration, use the **no** form of this command.

**ip name-server** *a.b.c.d*

**no ip name-server** *a.b.c.d*

<b>Syntax Description</b>	<i>a.b.c.d</i> Domain name server for local Cisco UMG.	
<b>Command Modes</b>	Cisco UMG configuration (config)	
<b>Command History</b>	<b>Cisco UMG Version</b>	<b>Modification</b>
	1.0	This command was introduced.
<b>Usage Guidelines</b>	<p>A domain name server is optional unless you have Avaya Interchange, in which case it is mandatory for failover support.</p> <p>Cisco UMG supports up to four domain name servers.</p>	
<b>Examples</b>	<p>The following example illustrates the use of the <b>ip name-server</b> command:</p> <pre>umg-1# config t umg-1(config)# ip domain-name mycompany.com umg-1(config)# ip name-server dns1.mycompany.com umg-1(config)# end umg-1# show hosts Hostname:      umg-1 Domain:        mycompany.com [...] umg-1#</pre>	
<b>Related Commands</b>	<b>Command</b>	<b>Description</b>
	<a href="#">show hosts</a>	Displays details for the current configuring messaging gateway.
	<a href="#">show messaging-gateway</a>	Displays all Cisco UMGs including the peer messaging gateways and the current configuring messaging gateway.
