

Release Notes for the Cisco 3825 Series Integrated Services Router in an IP Radio Access Network Environment for Cisco IOS Release 12.4(16)MR1

Published: January, 2008

These release notes are for the Cisco 3825 Series Integrated Services Router in an IP Radio Access Network (RAN) Environment for Cisco IOS Release 12.4(16)MR1. Cisco IOS Release 12.4(16)MR1 is required to deploy the Cisco 3825 router in an IP RAN Optimization solution.

These release notes are updated as needed to describe new features, memory requirements, hardware support, software platform deferrals, and changes to the microcode and related documents.

For a list of the software caveats that apply to Cisco IOS Release 12.4(16)MR1, see the [“Caveats in Cisco IOS Release 12.4\(16\)MR1” section on page 3](#). To review the release notes for Cisco IOS Release 12.4, go to www.cisco.com. Click the **Support** tab and select **Select a Product** from the drop-down menu. Under Select a category, click **Cisco IOS Software**. Under Select a sub-category, click **Cisco IOS Software Release 12.4 Family**. Under Select a product, click **Cisco IOS Software Releases 12.4 Mainline**. Under General Information, click **Release Notes > Cross-Platform Release Notes for Cisco IOS Release 12.4, Part 5: Caveats**.

Introduction

With Cisco IOS Release 12.4(16)MR and later, Cisco 3825 series integrated services routers can be used in an Internet Protocol Radio Access Network (IP RAN) environment. The Cisco IP RAN feature provides both:

- Global System for Mobile Communication (GSM) Abis Optimization over IP and
- Universal Mobile Telecommunication System (UMTS) Iub Optimization over IP

The Cisco IP RAN feature enables bandwidth efficient transport of GSM and UMTS traffic between the Base Transceiver Station (BTS) and the Base Station Controller (BSC) in GSM RANs and between Node B and Radio Network Controllers (RNC) in UMTS RANs. This results in significant reductions in operating expenditures to the mobile wireless operator and enables new revenue-generating services for the future.

System Configuration Requirements

When being implemented in an IP RAN solution, the Cisco 3825 series integrated services router requires the following minimum software installation:

- Cisco IOS Release 12.4(16)MR1 software

Memory Recommendations

[Table 1](#) lists memory requirements for the IP RAN solution.

Table 1 Cisco IOS Release 12.4(16)MR1 Memory Recommendations

| Platform | Feature Set | Software Image | Flash Memory Recommended | DRAM Memory Recommended | Runs From |
|--|------------------|------------------|--------------------------|-------------------------|-----------|
| Cisco 3825 Series Integrated Services Router | RAN Optimization | c3825-iprank9-mz | 128 MB | 256 MB | RAM |

Determining the Software Version

To determine the image and version of Cisco IOS software running on your Cisco 3825 series integrated services router, log in to the Cisco 3825 series integrated services router and enter the **show version** EXEC command:

```
router> show version
Cisco Internetwork Operating System Software
IOS (tm) 3800 Software (C3825-IPRANK9-MZ), Version 12.4(16)MR1, EARLY DEPLOYMENT
RELEASE SOFTWARE (fcl)
```

Upgrading to a New Software Release

For general information about upgrading to a new software release, refer to Support Download Software at the following URL:

<http://www.cisco.com/public/sw-center/index.shtml>

New and Changed Information

The following sections list the new hardware and software features supported by the Cisco 3825 series integrated services router.

New Features in Cisco IOS Release 12.4(16)MR1 Software

In Cisco IOS Release 12.4(16)MR1, the Cisco 3825 router now supports the following:

- RFC 4717: ATM over MPLS
- RFC 4454: ATM over L2TPv3
- RFC 4023: MPLS over GRE
- RFC 4553: Structure-Agnostic TDM over Packet (SAToP)
- draft-ietf-pwe3-cespsn: Structure-aware TDM Circuit Emulation Service over Packet-Switched Network (CESoPSN)
- RFC 4448: Encapsulation Methods for Transport of Ethernet over MPLS Networks
- Up to 12 ATM ports in an IMA group with the AIM-ATM-8 installed in slot 0

New Features in Cisco IOS Release 12.4(16)MR Software

In Cisco IOS Release 12.4(16)MR, the Cisco 3825 router now supports the following:

- GSMmux—Global System for Mobile Communication (GSM) Abis Optimization over IP
- UMTSmux—Universal Mobile Telecommunication System (UMTS) Iub Optimization over IP

Hardware Supported on the Cisco 3825 Series Integrated Services Router

The following cards are supported on the Cisco 3825 router:

- NM-2W
- AIM-ATM-8
- VWIC-2T1/E1-RAN

Caveats in Cisco IOS Release 12.4(16)MR1

The following sections list resolved and open caveats for the Cisco 3825 series integrated services router running Cisco IOS Release 12.4(16)MR1. Only severity 1 through 3 caveats are included.

Caveats describe unexpected behavior in Cisco IOS software releases. Severity 1 caveats are the most serious caveats, severity 2 caveats are less serious, and severity 3 caveats are the least serious.

Caveats in Cisco IOS Releases 12.4 and 12.4T are also in Cisco IOS Release 12.4(16)MR1. For information on caveats in:

- Cisco IOS Release 12.4—See *Caveats for Cisco IOS Release 12.4*.
- Cisco IOS Release 12.4T—See *Caveats for Cisco IOS Release 12.4T*.

These two documents list severity 1 and 2 caveats and are located on CCO and the Documentation DVD.

Note If you have an account with Cisco.com, you can use Bug Navigator II to find caveats of any severity for any release. To reach Bug Navigator II, go to Cisco.com. Click the **Support** tab and select **Support** from the drop-down menu. Under Frequently Used Resources, click **Bug Toolkit**. You will then need to log in. Another option is to go directly to http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl.

Open Caveats

This section documents possible unexpected behavior by Cisco IOS Release 12.4(16)MR1 and describes only severity 1 and 2 caveats and selected severity 3 caveats.

CSCsl27667:

Description: MWR uses only the first 16 bits of the assigned control connection ID AVP.

Workaround: There is no workaround for the 12.4(16)MR1 image.

Resolved Caveats

CSCsk53991:

Description: ISR ATM cell switching feature is broken.

Workaround: There is no workaround for the 12.4(16)MR image and prior images.

Caveats in Cisco IOS Release 12.4(16)MR

The following sections list resolved and open caveats for the Cisco 3825 Series Integrated Services Router running Cisco IOS Release 12.4(16)MR. Only severity 1 through 3 caveats are included.

Caveats describe unexpected behavior in Cisco IOS software releases. Severity 1 caveats are the most serious caveats, severity 2 caveats are less serious, and severity 3 caveats are the least serious.

Caveats in Cisco IOS Releases 12.4 and 12.4T are also in Cisco IOS Release 12.4(16)MR. For information on caveats in:

- Cisco IOS Release 12.4—See *Caveats for Cisco IOS Release 12.4*.
- Cisco IOS Release 12.4T—See *Caveats for Cisco IOS Release 12.4T*. These two documents list severity 1 and 2 caveats and are located on CCO and the Documentation DVD.

**Note**

If you have an account with Cisco.com, you can use Bug Navigator II to find caveats of any severity for any release. To reach Bug Navigator II, go to Cisco.com. Click the **Support** tab and select **Support** from the drop-down menu. Under Frequently Used Resources, click **Bug Toolkit**. You will then need to log in. Another option is to go directly to http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl.

Open Caveats

There are no known open caveats in Cisco IOS Release 12.4(16)MR.

Troubleshooting

Collecting Data for Router Issues

To collect data for reporting router issues, use the following command:

- **show tech-support**—Displays general information about the router if it reports an issue.

Collecting Data for ROMmon Issues

To collect data for ROMmon issues, use the following command while in EXEC mode:

- **showmon**—Displays currently selected ROM monitor.

Documentation Updates

There are no documentation updates at this time.
