# **Preface**

This guide describes how you can configure and maintain the Cisco Prime Infrastructure Release 2.0 using the command-line interface (CLI). Each topic provides a high-level summary of the tasks required for using the CLI for the Prime Infrastructure in the Unified Network Solution that runs on supported appliances for small, medium, and large Cisco Prime Infrastructure deployments.

- Who Should Read This Guide, page ix
- How to Use This Guide, page ix
- How This Guide Is Organized, page x
- Document Conventions, page x
- Documentation Updates, page xi
- Related Documentation, page xi
- Obtaining Documentation and Submitting a Service Request, page xii

# Who Should Read This Guide

The majority of the instructions in this guide are straightforward; however, a few are complex. Therefore, only experienced users should use these instructions.

Use this guide in conjunction with the documentation listed in Related Documentation, on page xi.

# How to Use This Guide

We recommend that you use the information in this guide as follows:

- Read the document in its entirety. Subsequent sections build on information and recommendations discussed in previous sections.
- Use this document for all-inclusive information about the Prime Infrastructure appliance.
- Do not vary the command-line conventions.

# How This Guide Is Organized

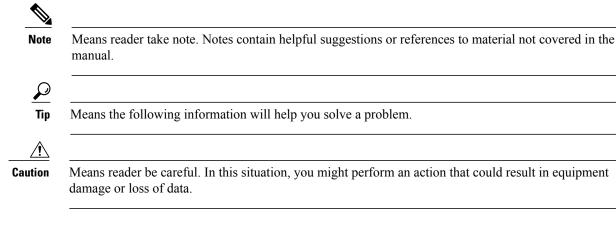

The following table lists the major sections of this guide.

Chapter	Title	Description
Overview of the Cisco Prime Infrastructure Command-Line Interface	Overview of the Cisco Prime Infrastructure Command-Line Interface	Provides an overview of the Prime Infrastructure CLI environment and command modes.
Using the Command-Line Interface	Using the Cisco Prime Infrastructure Command-Line Interface	Describes how you can access and administer Prime Infrastructure using the CLI.
Command Reference	Cisco Prime Infrastructure Command Reference	Provides a complete description of all Prime Infrastructure CLI commands.

# **Document Conventions**

This guide uses the following conventions to convey instructions and information.

Convention	Description
bold font	Commands and keywords.
<i>italic</i> font	Variables for which you supply values.
[]	Keywords or arguments that appear within square brackets are optional.
$\{x \mid y \mid z\}$	A choice of required keywords appears in braces separated by vertical bars. You must select one.
courier font	Examples of information displayed on the screen.
bold courier font	Examples of information you must enter.
<>	Nonprinting characters (for example, passwords) appear in angle brackets.
[]	Default responses to system prompts appear in square brackets.

# **Documentation Updates**

This table lists the documentation updation dates.

Table 1: Updates to the CLI Reference Guide for the Cisco Prime Infrastructure

Date	Description
11/1/10	Cisco Network Control System (NCS) Release 1.0
05/31/12	Cisco Network Control System (NCS) Release 1.1
08/27/12	Cisco Prime Infrastructure Release 1.2
04/04/13	Cisco Prime Infrastructure Release 1.4

# **Related Documentation**

The tables lists the Cisco Prime Infrastructure documents.

#### **Table 2: Product Documentation**

# **Obtaining Documentation and Submitting a Service Request**

For information on obtaining documentation, submitting a service request, and gathering additional information, see the monthly What's New in Cisco Product Documentation, which also lists all new and revised Cisco technical documentation, at:

http://www.cisco.com/en/US/docs/general/whatsnew/whatsnew.html

Subscribe to the *What's New in Cisco Product Documentation* as a Really Simple Syndication (RSS) feed and set content to be delivered directly to your desktop using a reader application. The RSS feeds are a free service and Cisco currently supports RSS version 2.0.

# **Overview of the Cisco Prime Infrastructure Command-Line Interface**

This chapter provides an overview of how to access the Cisco Prime Infrastructure command-line interface (CLI), the different command modes, and the commands that are available in each mode.

You can configure and monitor the Prime Infrastructure through the web interface. You can also use the CLI to perform the configuration and monitoring tasks described in this guide.

- Accessing the Prime Infrastructure Command Environment, page 1
- User Accounts and Modes in the Prime Infrastructure CLI, page 2
- Command Modes in the Prime Infrastructure CLI, page 6
- CLI Audit, page 14

# **Accessing the Prime Infrastructure Command Environment**

You can access the Prime Infrastructure CLI through a secure shell (SSH) client or the console port using one of the following machines:

- Windows PC running Windows XP/Vista
- Apple Computer running Mac OS X 10.4 or later
- PC running Linux

## **User Accounts and Modes in the Prime Infrastructure CLI**

Two different types of accounts are available on the Prime Infrastructure CLI:

- Admin (administrator)
- Operator (user)

When you power on the Prime Infrastructure appliance for the first time, you are prompted to run the setup utility to configure the appliances. During this setup process, an administrator user account, also known as an Admin account, is created. After you enter the initial configuration information, the appliance automatically reboots and prompts you to enter the username and the password that you specified for the Admin account. You must use this Admin account to log in to the Prime Infrastructure CLI for the first time.

An Admin can create and manage Operator (user) accounts (which have limited privileges and access to the Prime Infrastructure server). An Admin account also provides the functionality that is needed to use the Prime Infrastructure CLI.

To create more users (with admin and operator privileges) with SSH access to the Prime Infrastructure CLI, you must enter the **username** command in configuration mode (see Command Modes in the Prime Infrastructure CLI).

Table 3: Command Privileges lists the command privileges for each type of user account: Admin and Operator (user).

User Account		
	Admin	Operator (User)
application commands	*	
backup	*	
backup-logs	*	
cdp run	*	
clock	*	
configure terminal	*	
copy commands	*	
debug	*	
delete	*	
dir	*	
exit	*	*

undebug	*	
write	*	

Logging in to the Prime Infrastructure server places you in operator (user) mode or admin (EXEC) mode, which always requires a username and password for authentication.

You can tell which mode you are in by looking at the prompt. A right angle bracket (>) appears at the end of operator (user) mode prompt; a pound sign (#) appears at the end of admin mode prompt, regardless of the submode.

# **Command Modes in the Prime Infrastructure CLI**

This section describes the command modes supported in Prime Infrastructure.

## **EXEC Commands**

EXEC commands primarily include system-level commands such as **show** and **reload** (for example, application installation, application start and stop, copy files and installations, restore backups, and display information).

- Table 4: Summary of EXEC Commands describes the EXEC commands
- Table 5: Summary of show Commands describes the show commands in EXEC mode

For detailed information on EXEC commands, see Understanding Command Modes, page 2-5.

## **EXEC or System-Level Commands**

Table 4: Summary of EXEC Commands describes EXEC mode commands.

#### Table 4: Summary of EXEC Commands

	Description
application install	Installs a specific application bundle.
application remove	Removes a specific application.
application start	Starts or enables a specific application.
application stop	Stops or disables a specific application.
application upgrade	Upgrades a specific application bundle.
backup	Performs a backup and places the backup in a repository.
backup-logs	Performs a backup of all of the logs on the Prime Infrastructure to a remote location.
clock	Sets the system clock on the Prime Infrastructure server.
configure	Enters configuration mode.
сору	Copies any file from a source to a destination.
debug	Displays any errors or events for various command situations; for example, backup and restore, configuration, copy, resource locking, file transfer, and user management.
delete	Deletes a file in the Prime Infrastructure server.
dir	Lists the files in the Prime Infrastructure server.
exit	Disconnects the encrypted session with a remote system. Exits from the current command mode to the previous command mode.
forceout	Forces the logout of all of the sessions of a specific Prime Infrastructure server system user.
halt	Disables or shuts down the Prime Infrastructure server.
help	Describes the help utility and how to use it in the Prime Infrastructure server.
mkdir	Creates a new directory.
ncs	NCS-related commands used to start, stop and back up the server.

	Description
nslookup	Queries the IPv4 address or hostname of a remote system.
patch	Installs System or Application patch.
ping	Determines the IPv4 network connectivity to a remote system.
ping6	Determines the IPv6 network connectivity to a remote system.
reload	Reboots the Prime Infrastructure server.
restore	Restores a previous backup.
rmdir	Removes an existing directory.
root	Executes the root shell.
root_enable	Activates the <b>root</b> command.
show	Provides information about the Prime Infrastructure server.
ssh	Starts an encrypted session with a remote system.
tech	Provides Cisco Technical Assistance Center (TAC) commands.
telnet	Establishes a Telnet connection to a remote system.
terminal length	Sets terminal line parameters.
terminal session-timeout	Sets the inactivity timeout for all terminal sessions.
terminal session-welcome	Sets the welcome message on the system for all terminal sessions.
terminal terminal-type	Specifies the type of terminal connected to the current line of the current session.
traceroute	Traces the route of a remote IP address.
undebug	Disables the output (display of errors or events) of the <b>debug</b> command for various command situations; for example, backup and restore, configuration, copy, resource locking, file transfer, and user management.
write	Erases the startup configuration that forces to run the setup utility and prompt the network configuration, copies the running configuration to the startup configuration, and displays the running configuration on the console.

### show Commands

The **show** commands are used to display the Prime Infrastructure settings and are among the most useful commands. See Table 5: Summary of show Commands for a summary of the **show** commands. The **show** commands must be followed by a keyword; for example, **show application status**. Some **show** commands require an argument or variable after the keyword to function; for example, **show application version**.

#### Table 5: Summary of show Commands

	Description
application (requires keyword)	Displays information about the installed application; for example, status information or version information.
backup (requires keyword)	Displays information about the backup.
cdp (requires keyword)	Displays information about the enabled Cisco Discovery Protocol interfaces.
clock	Displays the day, date, time, time zone, and year of the system clock.
сри	Displays CPU information.
disks	Displays file-system information of the disks.
icmp-status	Displays the Internet Control Message Protocol (ICMP) echo response configuration information.
interface	Displays statistics for all of the interfaces configured on the Prime Infrastructure.
inventory	Displays information about the hardware inventory, including the Prime Infrastructure appliance model and serial number.
logging (requires keyword)	Displays the Prime Infrastructure server logging information.
logins (requires keyword)	Displays the login history of the Prime Infrastructure server.
memory	Displays memory usage by all running processes.
ntp	Displays the status of the Network Time Protocol (NTP) servers.
ports	Displays all of the processes listening on the active ports.
process	Displays information about the active processes of the Prime Infrastructure server.
repository (requires keyword)	Displays the file contents of a specific repository.

	Description
restore (requires keyword)	Displays the restore history in the Prime Infrastructure.
running-config	Displays the contents of the configuration file that currently runs in the Prime Infrastructure.
startup-config	Displays the contents of the startup configuration in the Prime Infrastructure.
tech-support	Displays system and configuration information that you can provide to the TAC when you report a problem.
terminal	Displays information about the terminal configuration parameter settings for the current terminal line.
timezone	Displays the current time zone in the Prime Infrastructure.
timezones	Displays all of the time zones available for use in the Prime Infrastructure.
udi	Displays information about the unique device identifier (UDI) of the Prime Infrastructure.
uptime	Displays how long the system you are logged in to has been up and running.
users	Displays information about the system users.
version	Displays information about the currently loaded software version, along with hardware and device information.

## **Configuration Commands**

Configuration commands include **interface** and **repository**. To access configuration mode, run the **configure** command in EXEC mode.

Some of the configuration commands require that you enter the configuration submode to complete the configuration.

Table 6: Summary of Configuration Commands describes the configuration commands.

	Description
backup-staging-url	Specifies a Network File System (NFS) temporary space or staging area for the remote directory for backup and restore operations.
cdp holdtime	Specifies the amount of time the receiving device should hold a Cisco Discovery Protocol packet from the Prime Infrastructure server before discarding it.
cdp run	Enables Cisco Discovery Protocol.
cdp timer	Specifies how often the Prime Infrastructure server sends Cisco Discovery Protocol updates.
clock timezone	Sets the time zone for display purposes.
do	Executes an EXEC-level command from configuration mode or any configuration submode.
	Note To initiate, the do command precedes the EXEC command.
end	Returns to EXEC mode.
exit	Exits configuration mode.
hostname	Sets the hostname of the system.
icmp echo	Configures the ICMP echo requests.
interface	Configures an interface type and enters interface configuration mode.
ipv6 address autoconfig	Enables IPv6 stateless autoconfiguration in interface configuration mode.
ipv6 address dhcp	Enables IPv6 address DHCP in interface configuration mode.
ip address	Sets the IP address and netmask for the Ethernet interface.         Note       This is an interface configuration command.

	Description
ip default-gateway	Defines or sets a default gateway with an IP address.
ip domain-name	Defines a default domain name that a Prime Infrastructure server uses to complete hostnames.
ip name-server	Sets the Domain Name System (DNS) servers for use during a DNS query.
kron occurrence	Schedule one or more Command Scheduler commands to run at a specific date and time or a recurring level.
kron policy-list	Specifies a name for a Command Scheduler policy.
logging	Enables the system to forward logs to a remote system.
logging loglevel	Configures the log level for the <b>logging</b> command.
no	Disables or removes the function associated with the command.
ntp	Synchronizes the software clock through the NTP server for the system.
password-policy	Enables and configures the password policy.
repository	Enters repository submode.
service	Specifies the type of service to manage.
snmp-server community	Sets up the community access string to permit access to the Simple Network Management Protocol (SNMP).
snmp-server contact	Configures the SNMP contact the Management Information Base (MIB) value on the system.
snmp-server host	Sends SNMP traps to a remote system.
snmp-server location	Configures the SNMP location MIB value on the system.
username	Adds a user to the system with a password and a privilege level.

For detailed information on configuration mode and submode commands, see Understanding Command Modes, page 2-5.

# **CLI** Audit

You must have administrator access to execute the Prime Infrastructure configuration commands. Whenever an administrator logs in to configuration mode and executes a command that causes configurational changes in the Prime Infrastructure server, the information related to those changes is logged in the Prime Infrastructure operational logs.

Table 7: Configuration Mode Commands for the Operation Log describes configuration mode commands that generate operational logs.

	Description
clock	Sets the system clock on the Prime Infrastructure server.
ip name-server	Sets the DNS servers for use during a DNS query.
hostname	Sets the hostname of the system.
ip address	Sets the IP address and netmask for the Ethernet interface.
ntp server	Allows synchronization of the software clock by the NTP server for the system.

#### Table 7: Configuration Mode Commands for the Operation Log

In addition to configuration mode commands, some commands in EXEC mode generate operational logs. Table 8: EXEC Mode Commands for the Operation Log describes EXEC mode commands that generate operational logs.

Table 8: EXEC Mode Commands for the Operation Log

	Description
backup	Performs a backup and places the backup in a repository.
restore	Restores from backup the file contents of a specific repository.
backup-logs	Backs up system logs.

# **Using the Command-Line Interface**

This chapter provides helpful tips for understanding and configuring the Cisco Prime Infrastructure from the command-line interface (CLI). The Prime Infrastructure can be deployed for small, medium, and large deployments and is available on different platforms and also as a software that can run on VMware.

- Before Accessing the CLI, page 15
- Running the Setup Utility to Configure the Prime Infrastructure, page 15
- Accessing the Prime Infrastructure CLI, page 17
- Understanding Command Modes, page 20
- Navigating the CLI Commands, page 26
- Where to Go Next, page 32

## **Before Accessing the CLI**

Before logging in to the Prime Infrastructure CLI, ensure that you have completed the installation tasks as specified in the *Cisco Prime Infrastructure 2.0 Quick Start Guide*.

# **Running the Setup Utility to Configure the Prime Infrastructure**

When you power on the Prime Infrastructure appliances for the first time, you are prompted to run the setup utility to configure the Prime Infrastructure appliances. Before you run the utility using the **setup** command, ensure that you have values for the following network configuration prompts:

- Hostname
- IP address
- Netmask
- Gateway
- Domain
- Nameserver

- Network Time Protocol (NTP) server (optional)
- User ID
- · Password

The following is a sample output from the **setup** command:

```
Please type 'setup' to configure the appliance
                 *****
localhost login: setup
Press 'Ctrl-C' to abort setup
Enter hostname[]: NCS
Enter IP address[]: 172.16.90.183
Enter IP default netmask[]: 255.255.255.0
Enter IP default gateway[]: 172.16.90.1
Enter default DNS domain[]: example.com
Enter primary nameserver[]: 172.16.168.183
Add/Edit another nameserver? Y/N : n
Enter primary NTP server[time.nist.gov]:
Add/Edit secondary NTP server? Y/N : n
Enter username[admin]:
Enter password:
Enter password again:
Bringing up network interface...
Pinging the gateway...
Pinging the primary nameserver...
Do not use 'Ctrl-C' from this point on...
Appliance is configured
```

After you enter the required information, the Prime Infrastructure appliance automatically reboots and the following login prompt appears:

*machine\_name* login: where *machine\_name* identifies the hostname that you specified when you ran the **setup** command.

In this example, this prompt appears:

#### NCS login:

To log in, use the administrator user account (and the corresponding password) that you created during the setup process. You must also use this Admin account to log in to the Prime Infrastructure CLI for the first time. After accessing the CLI as an administrator, you can create more users (with admin and operator privileges) with SSH access to the CLI by running the **username** command in configuration mode.

The administrator user account and the corresponding password (a CLI user account) that you created during the initial setup wizard can be used to manage the Prime Infrastructure application using the CLI. The CLI user has privileges to start and stop the application software, backup and restore the Prime Infrastructure application data, apply software patches and upgrades to the Prime Infrastructure application software, view all of the system and the application logs, and reload or shut down the Prime Infrastructure appliance. To protect the CLI user credentials, explicitly create users with access to the CLI.

Note

Any users that you create from the Prime Infrastructure web interface cannot automatically log in to the Prime Infrastructure CLI. You must explicitly create users with access to the CLI. To create these users, you must log in to the CLI using the Admin account that you created during setup; then, enter configuration mode, and run the **username** command.

## **Accessing the Prime Infrastructure CLI**

Before logging in to the Prime Infrastructure CLI, ensure that you have completed the hardware installation and configuration process outlined in the Before Accessing the CLI, on page 15

To log in to the Prime Infrastructure server and access the CLI, use an SSH secure shell client or the console port. You can log in from:

- A PC running Windows XP/Vista.
- A PC running Linux.
- An Apple computer running Mac OS X 10.4 or later.
- Any terminal device compatible with VT100 or ANSI characteristics. On the VT100-type and ANSI devices, you can use cursor-control and cursor-movement key. Keys include left arrow, up arrow, down arrow, right arrow, Delete, and Backspace. The CLI senses the use of the cursor-control keys and automatically uses the optimal device characteristics.

To exit the CLI, use the **exit** command from EXEC mode. If you are currently in one of the configuration modes and you want to exit the CLI, enter the **end**, **exit**, or press **Ctrl z** command to return to EXEC mode, and then enter the **exit** command.

## **Supported Hardware and Software Platforms**

The following valid terminal types can access the Prime Infrastructure:

- 1178
- 2621
- 5051
- 6053
- 8510
- altos5
- amiga
- ansi
- apollo
- Apple\_Terminal
- att5425
- ibm327x
- kaypro
- vt100

You can also access the Prime Infrastructure through an SSH client or the console port.

## **Opening the CLI with Secure Shell**

Note

To access the Prime Infrastructure CLI environment, use any SSH client that supports SSH v2.

The following example shows you how to log in with a Secure Shell (SSH) client (connecting to a wired WAN) via a PC by using Windows XP. Assuming that Prime Infrastructure is preconfigured through the setup utility to accept an Admin (administrator) user, log in as Admin.

- **Step 1** Use any SSH client and start an SSH session. The SSH window appears.
- Step 2Press Enter or Spacebar to connect.The Connect to Remote Host window appears.
- Step 3 Enter a hostname, username, port number, and authentication method.In this example, you enter ncs for the hostname, admin for the username, and 22 for the port number; and, for the authentication method, choose Password from the drop-down list.
- Step 4Click Connect, or press Enter.The Enter Password window appears.
- Step 5Enter your assigned password for the administrator.<br/>The SSH with the Add Profile window appears.
- **Step 6** (Optional) Enter a profile name in the text box and click **Add to Profile**.
- Step 7Click Close in the Add Profile window.The Prime Infrastructure command prompt appears. You can now enter Prime Infrastructure CLI commands.

## **Opening the CLI Using a Local PC**

If you need to configure Prime Infrastructure locally (without connecting to a wired LAN), you can connect a PC to the console port on the Prime Infrastructure appliance by using a null-modem cable.

The serial console connector (port) provides access to the CLI locally by connecting a terminal to the console port. The terminal is a PC running terminal-emulation software or an ASCII terminal. The console port (EIA/TIA-232 asynchronous) requires only a null-modem cable.

To connect a PC running terminal-emulation software to the console port, use a DB-9 female to DB-9 female null-modem cable.

To connect an ASCII terminal to the console port, use a DB-9 female to DB-25 male straight-through cable with a DB-25 female to DB-25 female gender changer.

The default parameters for the console port are 9600 baud, 8 data bits, no parity, 1 stop bit, and no hardware flow control.

If you are using a Cisco switch on the other side of the connection, set the switchport to duplex auto, speed auto (the default).

**Step 1** Connect a null-modem cable to the console port on the Cisco ISE-3315 and to the COM port on your PC.

**Step 2** Set up a terminal emulator to communicate with the Prime Infrastructure. Use the following settings for the terminal emulator connection: 9600 baud, 8 data bits, no parity, 1 stop bit, and no flow control.

**Step 3** When the terminal emulator activates, press **Enter**.

- **Step 4** At the console, enter your username, then press **Enter**.
- Step 5Enter the password, then press Enter.When the CLI activates, you can enter CLI commands to configure the Prime Infrastructure.

# **Understanding Command Modes**

This section describes the Prime Infrastructure command modes in detail.

## **EXEC Mode**

When you start a session on the Prime Infrastructure, you begin in admin or EXEC mode. From EXEC mode, you can enter configuration mode. Most of the EXEC commands (one-time commands), such as **show** commands, display the current configuration status. The admin or EXEC mode prompt consists of the device name or hostname before a pound sign (#), as shown:

ncs/admin# (Admin or EXEC mode)

Note

Throughout this guide, the Prime Infrastructure server uses the name *ncs* in place of the hostname and *admin* of the Prime Infrastructure server for the user account.

You can always tell when you are in EXEC mode or configuration mode by looking at the prompt.

• In EXEC mode, a pound sign (#) appears after the NCS server hostname and your username.

For example:

ncs/admin#

• In configuration mode, the 'config' keyword and a pound sign (#) appear after the hostname of the Prime Infrastructure server and your username.

For example:

```
ncs/admin# configure
Enter configuration commands, one per line. End with CNTL/Z.
ncs/admin(config)# (configuration mode)
```

If you are familiar with UNIX, you can equate EXEC mode to *root* access. You could also equate it to the administrator level in Windows NT or the supervisor in NetWare. In this mode, you have permission to access everything in the Prime Infrastructure server, including the configuration commands. However, you cannot enter configuration commands directly. Before you can change the actual configuration of the Prime Infrastructure server, you must enter configuration mode by entering the **configure** or **configure terminal** (conf t) command. Enter this command only when in EXEC mode.

For example:

```
ncs/admin# conf t
Enter configuration commands, one per line. End with CNTL-Z.
ncs(config)# (configuration mode)
The configuration mode has several submodes; each has its own prompt. To enter these submodes, you must
first enter configuration mode by entering the configure terminal command.
```

To exit configuration mode, enter the **end**, **exit**, or **Ctrl-z** command. To exit EXEC mode, enter the **exit** command. To exit both configuration and EXEC modes, enter this sequence of commands:

```
ncs/admin(config)# exit
ncs/admin# exit
To obtain a listing of commands in EXEC mode, enter a question mark (?):
```

ncs/admin# ?

## **Configuration Mode**

Use configuration mode to make changes to the existing configuration. When you save the configuration, these commands remain across Prime Infrastructure server reboots, but only if you run either of these commands:

- copy running-config startup-config
- write memory

To enter configuration mode, run the **configure** or **configure terminal (conf t)** command in EXEC mode. When in configuration mode, the Prime Infrastructure expects configuration commands.

For example:

```
ncs/admin# configure
Enter configuration commands, one per line. End with CNTL-Z.
ncs/admin(config)# (configuration mode)
From this level, you can enter commands directly into the Prime Infrastructure configuration. To obtain a
listing of commands in this mode, enter a question mark (?):
```

```
ncs/admin(config)# ?
```

The configuration mode has several configuration submodes. Each of these submodes places you deeper in the prompt hierarchy. When you enter the **exit**, command the Prime Infrastructure backs you out one level and returns you to the previous level. When you enter the **exit** command again, the Prime Infrastructure backs you out to the EXEC level.

In configuration mode, you can alternatively press the Ctrl-z instead of entering the end or exit command.

## **Configuration Submodes**

In the configuration submodes, you can enter commands for specific configurations. For example:

ncs/admin# config t
ncs/admin(config)# interface GigabitEthernet 0
ncs/admin(config-GigabitEthernet)#
To obtain a list of commands in this mode, enter a question mark (?):

ncs/admin(config-GigabitEthernet)# ?
Use the exit or end command to exit this prompt and return to the configuration prompt.

The following table lists the commands in the interface GigabitEthernet 0 configuration submode. Other configuration submodes exist including those specific to the **kron**, **repository**, and **password policy** commands.

Enter the command that you want to configure for the interface. This example uses the <b>interface</b> <b>GigabitEthernet</b> command Enter ? to display what you must enter next on the command line. This example shows the available <b>interface GigabitEtherne</b> configuration submode
commands.
Enter the command that you want to configure for the interface. This example uses the <b>ip</b> command.
Enter ? to display what you must enter next on the command line. This example shows the available <b>ip</b> configuration submode commands.
Enter the command that you want to configure for the interface. This example uses the <b>ip addresss</b> command.
Enter ? to display what you must enter next on the command line. In this example, you must enter an IPv4 address.
A carriage return <cr> doe not appear; therefore, you must enter additional arguments to complete the command.</cr>

#### Table 9: Command Options in the Interface GigabitEthernet 0 Configuration Submode

	Comment
	Enter the keyword or argument that you want to use. This example uses the 172.16.0.1 IP address.
	Enter ? to display what you must enter next on the command line. In this example, you must enter a network mask.
	A carriage return <cr> does not display; therefore, you must enter additional arguments to complete the command.</cr>
<pre>ncs/admin(config-GigabitEthernet)# ip address 172.16.0.1 255.255.255.224 ?</pre>	Enter the network mask. This example uses the 255.255.255.224 IP address. Enter ? to display what you must enter next on the command line. In this example, you can press Enter.
	A carriage return <cr> displays; you can press <b>Enter</b> to complete the command.</cr>

# **Navigating the CLI Commands**

This section describes how to navigate the commands and modes on the

### **Getting Help**

Use the question mark (?) and the arrow keys to help you enter commands:

• For a list of available commands, enter a question mark (?):

ncs/admin# ?

• To complete a command, enter a few known characters before ? (with no space):

#### ncs/admin# s?

• To display keywords and arguments for a command, enter ? at the prompt or after entering part of a command followed by a space:

ncs/admin# show ?

The Prime Infrastructure displays a list and brief description of available keywords and arguments.

Note

The <cr> symbol in command help stands for "carriage return", which means to press the **Return** or the **Enter** key). The <cr> at the end of command help output indicates that you have the option to press **Enter** to complete the command and that the arguments and keywords in the list preceding the <cr> symbol are optional. The <cr> symbol by itself indicates that no more arguments or keywords are available, and that you must press **Enter** to complete the command.

• To redisplay a command that you previously entered, press the **Up Arrow** key. Continue to press the **Up Arrow** key to see more commands.

### **Using the No and Default Forms of Commands**

Some EXEC or configuration commands have a **no** form. In general, use the **no** form to disable a function. Use the command without the **no** keyword to re-enable a disabled function or to enable a function disabled by default; for example, an IP address enabled by default. To disable the IP address, use the **no ip address** command; to re-enable the IP address, use the **ip address** command.

Configuration commands can also have a **default** form, which returns the command settings to the default values. Most commands disable by default, so in such cases using the **default** form has the same result as using the **no** form of the command. However, some commands are enabled by default and have variables set to certain default values. In these cases, the **default** form of the command enables the command and sets the variables to their default values.

See Command Reference, on page 33 for a description of the complete syntax of the configuration commands, and the **no** and **default** forms of a command.

# **Command-Line Conventions**

### **Command-Line Editing Key Conventions**

The Prime Infrastructure provides a number of keyboard shortcuts that you can use to edit an entered line.

#### Tab

Press Tab to try to finish the current command.

If you press the **Tab** key:

- At the beginning of a line, the system lists all of the short-form options.
- When you enter a partial command, the system lists all of the short form options beginning with those characters.
- When only one possible option is available, the system fills in the option automatically.

#### Ctrl-c

Press **Ctrl-c** to abort the sequence. Pressing this key sequence breaks out of any executing command and returns to the previous mode.

### Ctrl-z

Press Ctrl-z to exit configuration mode and return to previous configuration mode.

### ?

Enter a question mark (?) at the prompt to list the available commands.

### **Command Line Completion**

Command-line completion makes the Prime Infrastructure CLI more user-friendly. It saves you extra key strokes and helps out when you cannot remember the syntax of a command.

For example, for the **show running-config** command:

ncs/admin# show running-config
You can:

```
ncs/admin# sh run
```

The Prime Infrastructure expands the command sh run to show running-config.

Another shortcut is to press the **Tab** key after you type **sh**; the Cisco NCS CLI fills in the rest of the command, in this case **show**.

If the Cisco NCS CLI does not understand a command, it repeats the entire command line and places a caret symbol (^) under the point at which it is unable to parse the command.

For example:

ncs/admin# show unning-configuration

% Invalid input detected at '^' marker.

The caret symbol (^) points to the first letter in the command line that the Prime Infrastructure does not understand. Usually, this means that you need to provide additional arguments to complete the command or you mispelled the command. In this case, you omitted the "r" in the "unning" command. To fix the error, retype the command.

In another form of command-line completion, you can start a command by entering the first few characters, then pressing the **Tab** key. As long as you can match one command, the Prime Infrastructure CLI will complete the command. For example, if you type **sh** and press **Tab**, the Prime Infrastructure completes the **sh** with **show**. If Prime Infrastructure does not complete the command, you can enter a few more letters and press **Tab** again.

### **Continuing Output at the --More-- Prompt**

When working with the Prime Infrastructure CLI, output often extends beyond the visible screen length. For cases where output continues beyond the bottom of the screen, such as with the output of many ? or **show** commands, the output pauses and a --More-- prompt appears at the bottom of the screen. To resume output, press **Return** to scroll down one line, or press the **spacebar** to display the next full screen of output.

ρ Tip

If the output pauses on your screen but you do not see the --More-- prompt, try entering a smaller value for the screen length by using the **terminal length** EXEC command. Command output will not pause if you set the length value to zero (0).

## Where to Go Next

Now that you are familiar with some of the Prime Infrastructure CLI basics, you can begin to configure the Prime Infrastructure by using the CLI.

Remember that:

- You can use the question mark (?) and arrow keys to help you enter commands.
- Each command mode restricts you to a set of commands. If you have difficulty entering a command, check the prompt and then enter the question mark (?) to see a list of available commands.
- To disable a feature, enter the keyword **no** before the command; for example, **no ip address**.
- You must save your configuration changes so that you preserve them during a system reload or power outage.

Proceed to Command Reference, on page 33 for command listings, descriptions, syntax, usage guidelines, and sample output.

# **Command Reference**

This appendix contains necessary information on disk space management for all types of Cisco Prime Infrastructure deployments and an alphabetical listing of the commands specific to the Prime Infrastructure. The Prime Infrastructure comprise the following modes:

- EXEC
  - ° System-level
  - ° Show
- Configuration
  - ° configuration submode

Use EXEC mode system-level config or configure command to access configuration mode.

Each of the commands in this appendix is followed by a brief description of its use, command syntax, any command defaults, command modes, usage guidelines, and one or more examples. Throughout this appendix, the Prime Infrastructure server uses the name *ncs* in place of the Prime Infrastructure server's hostname.

If an error occurs in any command usage, use the **debug** command to determine the cause of the error.

- Disk Space Management in Prime Infrastructure, page 33
- EXEC Commands, page 37
- show Commands, page 142
- Configuration Commands, page 184

# **Disk Space Management in Prime Infrastructure**

This section provides information on disk space in the Prime Infrastructure appliances for all types of deployments. Each of the Prime Infrastructure appliances has a different amount of disk space, and managing that disk space is important to enable you to use the Prime Infrastructure efficiently.

Before proceeding to use the Prime Infrastructure CLI commands, familiarize yourself with disk space management in the Prime Infrastructure appliances. You can deploy the Prime Infrastructure on appliances with small, medium and large form factors and VMware. Table 10: Prime Infrastructure Appliances Configuration provides information on Prime Infrastructure appliances on all of the form factors and the available disk space that you need to manage the Prime Infrastructure.

**Table 10: Prime Infrastructure Appliances Configuration** 

Appliance Form Factor	Prime Infrastructure Appliances	Hard Disk Configuration
Small	-	2 x 250 GB SATA HDD.
Medium	-	2 x 300 GB SAS RAID HDD.
Large	-	4 x 300 GB SAS RAID HDD.
VMware	NCS-DEMO-10 (to run a Demo/Evaluation)	30 GB
	L-NCS-1.0-K9 (to run the PxP production image)	60 GB
	L-NCS-1.0-K9 (to run M&T production image)	200 GB

Table 11: Disk Space on /var Partition lists the disk space that you may use on the /var partition that has a total of 6 GB of disk space. You may use 308 MB of the 6 GB of disk space for the operating system and the Cisco ADE OS 2.0 log files. You can then use the remaining 5.7 GB of disk space for a medium and large type deployment.

Table 11:	Disk S	pace on	/var	Partition
-----------	--------	---------	------	-----------

Process	Files	Small	Medium and Large	VMware
Linux OS	System	-	258 MB	-
Cisco ADE OS 2.0	/var/log/ade/ADE.log	-	50 MB	-

All of the files that you create in the Prime Infrastructure reside in the /opt partition. You must manage the disk space for the files that you create in the /opt partition so that the files increase in size within the limits that do not have an impact on other files and services in the system.

Table 12: Disk Space on /opt Partition lists the disk space that you may use on the /opt partition that has a total of 410 GB of disk space. You may use 161 GB of disk space and the remaining of 249 GB for a medium and large type deployment. The remaining 249 GB of disk space can be better utilized for the database growth after you consider the disk space required for backup, restore, and replication.

Process	Files	Small	Medium and Large	VMware
CSCOcpm	Application product files (includes Oracle, Tomcat, and TimesTen)		7.5 GB	-

#### **Related Commands**

Command	Description
application remove	Removes or uninstalls an application.
application start	Starts or enables an application.
application stop	Stops or disables an application.
application upgrade	Upgrades an application bundle.
show application	Shows application information for the installed application packages on the system.

# application remove

Note	You are not allowed to run the <b>application remove</b> command from the CLI to remove the Prime Infrastructure application unless you are explicitly instructed to do so for an upgrade.			
	To remove a specific application other than the Prime Infrastructure, use the <b>application remove</b> command in EXEC mode. To remove this function, use the <b>no</b> form of this command.			
	application remove <i>ap</i>	plication-name		
	no application remove	application-name		
Syntax Description	application-name	Application name. Up to 255 alphanumeric characters.		
Command Default	No default behavior or	values.		
Command Modes	EXEC			
Usage Guidelines	Removes or uninstalls a	an application.		
Examples	ncs/admin# <b>applicati</b> Continue with applic	con remove ncs cation removal? [y/n] y		
	Application successf ncs/admin#	Fully uninstalled		
Related Commands	Command	Description		
	application install	Installs an application bundle.		
	application start	Starts or enables an application.		
	application stop	Stops or disables an application.		
	application upgrade	Upgrades an application bundle.		
	show application	Shows application information for the installed application packages on the system.		

# application reset-config

Note	This command is not currently supported by Prime Infrastructure.		
	To reset an application configuration to factory defaults, use the <b>application reset-config</b> command in EXE mode.	C	
	application reset-config application-name		
Syntax Description	<i>application-name</i> Name of the application to reset its configuration to factory defaults. Up to 255 alphanumeric characters.	_	
Command Default	No default behavior or values.		
Command Modes	EXEC		
Usage Guidelines	You can use the <b>application reset-config</b> command to reset the Prime Infrastructure configuration to factor defaults without reimaging the Prime Infrastructure appliance or VMware.		
Examples	<pre>ncs/admin# application reset-config ncs Initialize your identity policy database to factory defaults? (y/n): y Reinitializing local policy database to factory default state Stopping NCS Monitoring &amp; Troubleshooting Log Processor Stopping NCS Monitoring &amp; Troubleshooting Log Collector Stopping NCS Monitoring &amp; Troubleshooting Alert Process Stopping NCS Application Server Stopping NCS Monitoring &amp; Troubleshooting Session Database Stopping NCS database processes Extracting NCS database processes Extracting NCS database processes Restarting NCS database processes Performing NCS database processes Performing NCS database priming Application successfully reset configuration ncs/admin# application reset-config ncs Initialize your identity policy database to factory defaults? (y/n): n Existing policy database will be retained. Application successfully reset configuration ncs/admin#</pre>		

# application start

To enable a specific application, use the **application start** command in EXEC mode. To remove this function, use the **no** form of this command.

application start application-name

Syntax Description	application-name	Name of the predefined application that you want to enable. Up to 255 alphanumeric characters.		
Command Default	No default behavior or v	values.		
Command Modes	EXEC			
Usage Guidelines	Enables an application.			
	You cannot use this command to start the Prime Infrastructure application. If you use this command to start the application, you can see that the Prime Infrastructure is already running.			
Examples	ncs/admin# <b>applicati</b>	on start NCS		
	NCS M&T Session Data NCS Application Serv NCS M&T Log Collecto NCS M&T Log Processo	tes is already running, PID: 7585 base is already running, PID: 7851 rer process is already running, PID: 7935 or is already running, PID: 7955 or is already running, PID: 8005 resor is already running, PID: 8046		
	ncs/admin#			
Related Commands	Command	Description		
	application install	Installs an application bundle.		

application install	Installs an application bundle.
application remove	Removes or uninstalls an application.
application stop	Stops or disables an application.
application upgrade	Upgrades an application bundle.
show application	Shows application information for the installed application packages on the system.

# application stop

To disable a specific application, use the **application stop** command in EXEC mode. To remove this function, use the **no** form of this command.

application stop application-name

Syntax Description	application-name	Name of the predefined application that you want to disable. Up to 255 alphanumeric characters.		
Command Default	No default behavior or va	alues.		
Command Modes	EXEC			
Usage Guidelines	Disables an application.			
Examples	Stopping NCS Monitori Stopping NCS Monitori Stopping NCS Applicat	ng & Troubleshooting Log Processor ng & Troubleshooting Log Collector ng & Troubleshooting Alert Process tion Server ng & Troubleshooting Session Database

	application remove	Removes or uninstalls an application.
	application start	Starts or enables an application.
	application upgrade	Upgrades an application bundle.
	show application	Shows application information for the installed application packages on the system.

# application upgrade

To upgrade a specific application bundle, use the **application upgrade** command in EXEC mode. To remove this function, use the **application remove** command.

application upgrade application-bundle remote-repository-name

Syntax Description	application-bundle	Application name. Up to 255 alphanumeric characters.
	иррисаноп-ойнике	Note Enter the application name as 'PI' in uppercase.
	remote-repository-name	Remote repository name. Up to 255 alphanumeric characters.
Command Default	No default behavior or valu	ies.
Command Modes	EXEC	
Usage Guidelines	10 11	Indle, and preserves any application configuration data. <b>n upgrade</b> command when another application upgrade operation is in progress warning message:
<u> </u>	An existing application	n install, remove, or upgrade is in progress. Try again shortly.
Examples	<pre>ncs/admin# application upgrade NCS-appbundle-1.0.2.054.i386.tar.gz myremotereposi Do you want to save the current configuration ? (yes/no) [yes] ? yes Generating configuration Saved the running configuration to startup successfully Initiating Application Upgrade ncs/admin# ncs/admin# application upgrade NCS-appbundle-1.0.2.054.i386.tar.gz myremotereposi Do you want to save the current configuration ? (yes/no) [yes] ? no Initiating Application Upgrade ncs/admin#</pre>	
Related Commands	Command	Description
	application install	Installs an application bundle.

Command	Description
application remove	Removes or uninstalls an application.
application start	Starts or enables an application.
application stop	Stops or disables an application.
show application	Shows application information for the installed application packages on the system.

## backup

To perform a backup (including the Prime Infrastructure and Cisco ADE OS data) and place the backup in a repository, use the **backup** command in EXEC mode. To perform a backup of only the Prime Infrastructure application data without the Cisco ADE OS data, use the **application** command.

backup backup-namerepository repository-nameapplicationapplication-name

Syntax Description	backup-name	Name	of the backup file. Up to 100 alphanumeric characters.
	repository-name		of the location where the files should be backed up to. Up to 80 numeric characters.
	application-name	Appli	cation name. Up to 255 alphanumeric characters.
		Note	Enter the application name as 'PI' in uppercase.
Command Default	No default behavior or	values.	
Command Modes	EXEC		
Usage Guidelines	Performs a backup of th	e Prime I	nfrastructure and Cisco ADE OS data and places the backup in a repository.
	To perform a backup of the <b>application</b> comma		Prime Infrastructure application data without the Cisco ADE OS data, use
Examples			<b>repository myrepository</b> stamped filename: mybackup-100805-1222.tar.gpg
			repository myrepository application NCS stamped filename: mybackup-100805-1240.tar.gpg
Related Commands			
	Command		Description
	backup-logs		Backs up the system logs.
	delete		Deletes a file from the Prime Infrastructure server.

Reboots the system.

Lists a file from the Prime Infrastructure server.

dir

reload

Command	Description
repository	Enters the repository submode for configuration of backups.
restore	Restores from backup the file contents of a specific repository.
show backup history	Displays the backup history of the system.
show repository	Displays the available backup files located on a specific repository.

## backup-logs

To back up system logs, use the **backup-logs** command in EXEC mode. To remove this function, use the **no** form of this command.

backup-logs backup-name repository-name

Syntax Description	backup-name	Name of one or more files to back up. Up to 100 alphanumeric characters.
	repository-name	Location where files should be backed up to. Up to 80 alphanumeric characters.
Command Default	No default behavior or v	values.
Command Modes	EXEC	
Usage Guidelines	Backs up system logs.	
Examples	nos (admin# hashun la	

```
ncs/admin# backup-logs mybackup repository myrepository
% Creating log backup with timestamped filename: mybackup-100805-1754.tar.gz
ncs/admin#
```

### **Related Commands**

Command	Description
backup	Performs a backup ( Prime Infrastructure and Cisco ADE OS) and places the backup in a repository.
restore	Restores from backup the file contents of a specific repository.
repository	Enters the repository submode for configuration of backups.
show backup history	Shows the backup history of the system.
show repository	Shows the available backup files located on a specific repository.

# clock

To set the system clock, use the **clock** command in EXEC mode. To remove this function, use the **no** form of this command.

clock set [month day hh:min:ss yyyy]

Syntax Description	<i>month</i> Current month of the year by name. Up to three alphabetic characters. For example, Jan for January.			
	day Cu	rrent day (by date) of the month. Value = $0$ to 31. Up to two numbers.		
	hh:mm:ss Cu	rrent time in hours (24-hour format), minutes, and seconds.		
	yyyy Cu	rrent year (no abbreviation).		
Command Default	No default behavior or values.			
Command Modes	EXEC			
Usage Guidelines	Sets the system clock. You must to take effect.	st restart the Prime Infrastructure server after you reset the clock for the change		
Examples	ncs/admin# clock set May 5 18:07:20 2010 ncs/admin# show clock Thu May 5 18:07:26 UTC 2010 ncs/admin#			
<b>Related Commands</b>	Command	Description		
	show clock	Displays the time and date set on the system software clock.		

## configure

To enter configuration mode, use the **configure** command in EXEC mode. If the **replace** option is used with this command, copies a remote configuration to the system which overwrites the existing configuration.

show startup-config

### сору

To copy any file from a source to a destination, use the **copy** command in EXEC mode.

Syntax Description	running-config	Represents the current running configuration file.
	startup-config	Represents the configuration file used during initialization (startup).
	protocol	See Table 13: Protocol Prefix Keywords for protocol keyword options.
	hostname	Hostname of destination.
	location	Location of disk:/ <dirpath>.</dirpath>
	logs	The system log files.
	all	Copies all Prime Infrastructure log files from the system to another location. All logs are packaged as ncslogs.tar.gz and transferred to the specified directory on the remote host.
	filename	Allows you to copy a single Prime Infrastructure log file and transfer it to the specified directory on the remote host, with its original name.
	log_filename	Name of the Prime Infrastructure log file, as displayed by the <b>show logs</b> command (up to 255 characters).
	mgmt	Copies the Prime Infrastructure management debug logs and Tomcat logs from the system, bundles them as mgmtlogs.tar.gz, and transfers them to the specified directory on the remote host.
	runtime	Copies the Prime Infrastructure runtime debug logs from the system, bundles them as runtimelogs.tar.gz, and transfers them to the specified directory on the remote host.

**Command Default** No default behavior or values.

### **Command Modes** EXEC

The fundamental function of the **copy** command allows you to copy a file (such as a system image or configuration file) from one location to another location. The source and destination for the file specified uses the file system, through which you can specify any supported local or remote file location. The file system being used (a local memory source or a remote system) dictates the syntax used in the command.

You can enter on the command line all of the necessary source and destination information and the username and password to use; or, you can enter the **copy** command and have the server prompt you for any missing

information. You can enter up to a maximum of 2048 characters of source and destination URL information on the command line.

The copy command in the copies a configuration (running or startup).

The active configuration stores itself in the RAM. Every configuration command you enter resides in the running configuration. If you reboot your server, you lose the running configuration. If you make changes that you want to save, you must copy the running configuration to a safe location, such as a network server, or save it as the server startup configuration.

You cannot edit a startup configuration directly. All commands that you enter store themselves in the running configuration, which you can copy into the startup configuration.

In other words, when you boot a server, the startup configuration becomes the initial running configuration. As you modify the configuration, the two diverge: the startup configuration remains the same; the running configuration reflects the changes that you have made. If you want to make your changes permanent, you must save the running configuration to the startup configuration using the **write memory** command. The **write memory** command makes the current running configuration permanent.

Note I

If you do not save the running configuration, you will lose all your configuration changes during the next reboot of the server. You can also save a copy of the running and startup configurations using the following commands, to recover in case of loss of configuration:

copy startup-config location

copy running-config location

Note

The **copy** command is supported only for the local disk and not for a repository.

 $\mathcal{O}$ Tip

Aliases reduce the amount of typing that you need to do. For example, type **copy run start** (the abbreviated form of the **copy running-config startup-config** command).

The entire copying process might take several minutes and differs from protocol to protocol and from network to network.

Use the filename relative to the directory for file transfers.

Possible error is the standard FTP error message.

#### Table 13: Protocol Prefix Keywords

Keyword	Destination
ftp	URL for FTP network server. The syntax for this alias:
	ftp://location/directory

Keyword	Destination
sftp	URL for an SFTP network server. The syntax for this alias: <b>sftp:</b> //location/directory
tftp	URL for a TFTP network server. The syntax for this alias: <b>tftp:</b> //location/directory

#### **Examples**

```
ncs/admin# copy run start

Collecting logs...
ncs/admin#
This command is used to copy the certificate file from pnp to ftp.
```

ncs/admin# copy server.key /localdisk/tftp copy server.crt /localdisk/tftp copy ncs\_server\_certificate /localdisk/tftp

#### **Examples**

This command is used to copy the certificate from ftp tp pnp.

copy tftp://<PI Server IP Address>/server.key disk:/ copy tftp://<PI Server IP Address>/server.crt disk:/ copy tftp://<PI Server IP Address>/ncs\_server\_certificate.crt disk:/

Related Commands	Command	Description
	application install	Starts or stops a instance.
	backup	Performs a backup ( and Cisco ADE OS) and places the backup in a repository.
	delete	Deletes a file from the server.
	dir	Lists a file from the server.
	reload	Reboots the system.
	restore	Restores from backup the file contents of a specific repository.

I

Command	Description
show application	Shows application status and version information.
show version	Displays information about the software version of the system.

# debug

To display errors or events for command situations, use the **debug** command in EXEC mode.

debug{all | application | backup-restore | cdp | config | icmp | copy | locks | logging | snmp | system | transfer | user | utils}

Syntax Description	all	Enables all debugging.
	application	Application files.
		• <i>all</i> —Enables all application debug output. Set level between 0 and 7, with 0 being severe and 7 being all.
		• <i>install</i> —Enables application install debug output. Set level between 0 and 7, with 0 being severe and 7 being all.
		• <i>operation</i> —Enables application operation debug output. Set level between 0 and 7, with 0 being severe and 7 being all.
		• <i>uninstall</i> —Enables application uninstall debug output. Set level between 0 and 7, with 0 being severe and 7 being all.
	backup-restore	Backs up and restores files.
		• <i>all</i> —Enables all debug output for backup-restore. Set level between 0 and 7, with 0 being severe and 7 being all.
		• <i>backup</i> —Enables backup debug output for backup-restore. Set level between 0 and 7, with 0 being severe and 7 being all.
		• <i>backup-logs</i> —Enables backup-logs debug output for backup-restore. Set level between 0 and 7, with 0 being severe and 7 being all.
		• <i>history</i> —Enables history debug output for backup-restore. Set level between 0 and 7, with 0 being severe and 7 being all.
		• <i>restore</i> —Enables restore debug output for backup-restore. Set level between 0 and 7, with 0 being severe and 7 being all.
	cdp	Cisco Discovery Protocol configuration files.
		• <i>all</i> —Enables all Cisco Discovery Protocol configuration debug output. Set level between 0 and 7, with 0 being severe and 7 being all.
		• <i>config</i> —Enables configuration debug output for Cisco Discovery Protocol. Set level between 0 and 7, with 0 being severe and 7 being all.
		• <i>infra</i> —Enables infrastructure debug output for Cisco Discovery Protocol. Set level between 0 and 7, with 0 being severe and 7 being all.

I

config	Configuration files.		
	• <i>all</i> —Enables all configuration debug output. Set level between 0 and 7, with 0 being severe and 7 being all.		
	<ul> <li><i>backup</i>—Enables backup configuration debug output. Set level between 0 and 7, with 0 being severe and 7 being all.</li> <li><i>clock</i>—Enables clock configuration debug output. Set level between 0 and 7, with 0 being severe and 7 being all.</li> </ul>		
	• <i>infra</i> —Enables configuration infrastructure debug output. Set level between 0 and 7, with 0 being severe and 7 being all.		
	• <i>kron</i> —Enables command scheduler configuration debug output. Set level between 0 and 7, with 0 being severe and 7 being all.		
	• <i>network</i> —Enables network configuration debug output. Set level between 0 and 7, with 0 being severe and 7 being all.		
	• <i>repository</i> —Enables repository configuration debug output. Set level between 0 and 7, with 0 being severe and 7 being all.		
	• <i>service</i> —Enables service configuration debug output. Set level between 0 and 7, with 0 being severe and 7 being all.		
icmp	Internet Control Message Protocol (ICMP) echo response configuration.		
	<i>all</i> —Enable all debug output for ICMP echo response configuration. Set level between 0 and 7, with 0 being severe and 7 being all.		
сору	Copy commands. Set level between 0 and 7, with 0 being severe and 7 being a		
locks	Resource locking.		
	• <i>all</i> —Enables all resource locking debug output. Set level between 0 and 7, with 0 being severe and 7 being all.		
	• <i>file</i> —Enables file locking debug output. Set level between 0 and 7, with 0 being severe and 7 being all.		
logging	Logging configuration files.		
	<i>all</i> —Enables all logging configuration debug output. Set level between 0 and 7, with 0 being severe and 7 being all.		
snmp	SNMP configuration files.		
	<i>all</i> —Enables all SNMP configuration debug output. Set level between 0 and 7, with 0 being severe and 7 being all.		

	system	System files.
		• <i>all</i> —Enables all system files debug output. Set level between 0 and 7, with 0 being severe and 7 being all.
		• <i>id</i> —Enables system ID debug output. Set level between 0 and 7, with 0 being severe and 7 being all.
		• <i>info</i> —Enables system info debug output. Set level between 0 and 7, with 0 being severe and 7 being all.
		• <i>init</i> —Enables system init debug output. Set level between 0 and 7, with 0 being severe and 7 being all.
	transfer	File transfer. Set level between 0 and 7, with 0 being severe and 7 being all.
	user	User management.
		• <i>all</i> —Enables all user management debug output. Set level between 0 and 7, with 0 being severe and 7 being all.
		• <i>password-policy</i> —Enables user management debug output for password-policy. Set level between 0 and 7, with 0 being severe and 7 being all.
	utils	Utilities configuration files.
		<i>all</i> —Enables all utilities configuration debug output. Set level between 0 and 7, with 0 being severe and 7 being all.
Command Default	No default behavior or va	alues.
Command Modes	EXEC	
Usage Guidelines	Use the <b>debug</b> command to identify various failures within the Prime Infrastructure server; for example, setup failures or configuration failures.	
Examples	ncs/admin# <b>debug all</b> ncs/admin# <b>mkdir disk:/1</b> ncs/admin# 6 [15347]: utils: vsh_root_stubs.c[2742] [admin]: mkdir operation success	
		<b>c:/1</b> 1_root_stubs.c[2601] [admin]: Invoked Remove Directory disk:/1 command 1_root_stubs.c[2663] [admin]: Remove Directory operation success
	ncs/admin# <b>undebug al</b> ncs/admin#	11

### **Related Commands**

Command	Description
undebug	Disables the output (display of errors or events) of the <b>debug</b> command for various command situations.

## delete

To delete a file from the Prime Infrastructure server, use the **delete** command in EXEC mode. To remove this function, use the **no** form of this command.

**delete** *filename* [*disk:/path*]

Syntax Description	filename	Filename. Up to 80 alphanumeric characters.
	disk:/path	Location.
<b>Command Default</b>	No default behavior or values.	
Command Modes	EXEC	
Usage Guidelines	If you attempt to delete the configuration file or image, the system prompts you to confirm the deletion. Also, if you attempt to delete the last valid system image, the system prompts you to confirm the deletion.	
Examples	ncs/admin# <b>delete disk:/hs_err_pid19962.log</b> ncs/admin#	
<b>Related Commands</b>	Command	Description
	dir	Lists all of the files on the Prime Infrastructure server.

#### dir

### dir

To list a file from the Prime Infrastructure server, use the **dir** command in EXEC mode. To remove this function, use the **no** form of this command.

dir [word][recursive]

Syntax Description	word	Directory name. Up to 80 alphanumeric characters. Requires <b>disk:</b> / preceding the directory name.
	recursive	Lists a local directory or filename recursively.
Command Default	No default behavior or	values.
Command Modes	EXEC	
Examples	4096 Jun 10 : 4096 Aug 04 : 16384 Jun 09 : 2996022 Aug 05 : 4096 Aug 05 : Usage fo: 80' 63 152: ncs/admin# dir disk 0 Aug 05 2010 11:53 Usage fo: 80' 63 152: ncs/admin# dir recu: Directory of disk:/	:52 usermgmt.log r disk: filesystem 76189696 bytes total used 71618816 bytes free 34142208 bytes available rsive

#### **Related Commands**

dir

ls	Command	Description
	delete	Deletes a file from the Prime Infrastructure server.

## exit

<b>Related Commands</b>	Command	Description
Examples	ncs/admin# <b>exit</b>	
Usage Guidelines	Use the <b>exit</b> command in EXEC to move up from configuration m	mode to exit an active session (log out of the Prime Infrastructure server) or node.
Command Modes	EXEC	
Command Default	No default behavior or values.	
Syntax Description	This command has no arguments	or keywords.
	exit	
		on by logging out of the Prime Infrastructure server or to move up one mode se the <b>exit</b> command in EXEC mode.

Command	Description
end	Exits configuration mode.
exit	Exits configuration mode or EXEC mode.
Ctrl-z	Exits configuration mode.

### forceout

 To force users out of an active terminal session by logging them out of the Prime Infrastructure server, use the forceout command in EXEC mode.

 forceout username

 Syntax Description

 username

 The name of the user. Up to 31 alphanumeric characters.

 Command Default

 No default behavior or values.

 Examples

 ncs/admin# forceout user1

## halt

	To shut down and power off the system, use the <b>halt</b> command in EXEC mode.
	halt
	This command has no arguments or keywords.
Command Default	No default behavior or values.
Command Modes	EXEC
Usage Guidelines	Before you enter the <b>halt</b> command, ensure that the Prime Infrastructure is not performing any backup, restore, installation, upgrade, or remove operation. If you enter the <b>halt</b> command while the Prime Infrastructure is performing any of these operations, you will get one of the following warning messages:
	WARNING: A backup or restore is currently in progress! Continue with halt?
	WARNING: An install/upgrade/remove is currently in progress! Continue with halt? If you get any of these warnings, enter YEs to halt the operation, or enter NO to cancel the halt.
	If no processes are running when you use the <b>halt</b> command or if you enter <b>Yes</b> in response to the warning message displayed, the Prime Infrastructure asks you to respond to the following option:
	Do you want to save the current configuration ? Enter YES to save the existing Prime Infrastructure configuration. The Prime Infrastructure displays the following message:
	Saved the running configuration to startup successfully
Examples	ncs/admin# <b>halt</b> ncs/admin#

Command	Description
reload	Reboots the system.

# mkdir

To create a new directory on the Prime Infrastructure server, use the mkdir command in EXEC mode.

mkdir directory-name [disk:/path]

Syntax Description	directory-name	The name of the directory to create. Up to 80 alphanumeric characters.
	disk:/path	Use <i>disk:/path</i> with the directory name.
Command Default	No default behavior or	values.
Command Modes	EXEC	
Usage Guidelines	Use <i>disk:/path</i> with the included.	e directory name; otherwise, an error appears that indicates that the <i>disk:/path</i> must be
Examples	ncs/admin# <b>mkdir di</b> ncs/admin# dir Directory of disk:/	sk:/test
	4096 May 06 2 4096 May 06 2 16384 Mar 01 2 4096 May 06 2	2010 13:34:49 activemq-data/ 2010 13:40:59 logs/ 2010 16:07:27 lost+found/ 2010 13:42:53 target/ 2010 12:26:04 test/
	18 1908	r disk: filesystem 81067776 bytes total used 84521472 bytes free 14165248 bytes available

Command	Description
dir	Displays a list of files on the Prime Infrastructure server.
rmdir	Removes an existing directory.

### ncs start

	To start the Prime I	Infrastructure server, use the <b>ncs start</b> command.
	ncs start [verbose	]
Syntax Description	verbose	Displays the detailed messages during the start process.
Command Default	No default behavio	or or values.
Command Modes	EXEC	
Usage Guidelines	To see the message	es in the console, use the <b>ncs start verbose</b> command.
Examples	This example show	vs how to start the server:

ds	Command	Description
	ncs stop	Stops the Prime Infrastructure server.
	ncs status	Displays the current status of the Prime Infrastructure server.

### ncs stop

To stop the Prime Infrastructure server, use the **ncs stop** command in EXEC mode. To see the detailed messages, use the **ncs stop verbose** command.

ncs stop [verbose]

Syntax Description	verbose Displays the detailed messages during the stop process.
-	
Command Default	No default behavior or values.
Command Modes	EXEC
Usage Guidelines	To see the detailed messages, use the ncs stop verbose command.
Examples	This example shows how to stop the Prime Infrastructure server:
	<pre>&gt; ncs stop verbose Stopping Network Control System server Stopping Service Name: Reporting Reporting Reporting servessfully shutdown. Stopping Reporting Server(XMP)DONE NMS Server stopping Reporting Server(XMP)DONE NMS Server successfully shutdown. Stopping Service Name: NMS Server NMS Server is not running. Stopping Tomcat... Tomcat Stopped.

Network Control System successfully shutdown.

Command	Description
ncs start	Starts the Prime Infrastructure server.
ncs status	Displays the current status of he Prime Infrastructure server.

### ncs status

To display the server status, use the ncs status command in EXEC mode.

#### ncs status

This command has no arguments or keywords.

**Command Default** No default behavior or values.

**Command Modes** EXEC

**Examples** 

This example shows how to display the status of the server:

> ncs status Health Monitor Server is running. Reporting is running. Ftp Server is Success Database server is running Tftp Server is Success Matlab Server is Success NMS Server is running.

Command	Description
ncs start	Starts the server.
ncs stop	Stops the server.

## ncs password ftpuser password

To change the FTP username and password, use the **ncs password ftpuser password** command in EXEC mode.

ncs passwod ftpuser username password password

Syntax Description	username	The FTP user name
	password	The modified password. The password cannot contain 'cisco' or 'ocsic', or any variant obtained by changing the capitalization of letters therein or by substituting '1', ' ', or '!' for i, '0' for 'o', or '\$' for 's'.
Command Default	No default behavior or valu	1es.
Command Modes	EXEC	
Examples	This example shows how to > ncs password ftpuser	o change the FTP username and password:
Related Commands	Command	Description

Command	Description
ncs start	Starts Prime Infrastructure sever.
ncs stop	Stops Prime Infrastructure server.
ncs status	Displays the current status of Prime Infrastructure server.
ncs password root password	Changes the root password.

## ncs password root password

To change the root password, use the ncs password root password command in EXEC mode.

ncs passwod root password password

Syntax Description	password	The modified password. The password cannot contain 'cisco' or 'ocsic', or any variant obtained by changing the capitalization of letters therein or by substituting '1', ' ', or '!' for i, '0' for 'o', or '\$' for 's'.
Command Default	No default behavior	r or values.
Command Modes	EXEC	
Examples	Prime Infrastructure This example show	e s how to migrate archived files to server:
	> ncs password ro Loading USER - ro Validating new pa Resetting passwo Resetting passwo EXECUTION STATUS	assword rd rd COMPLETED.
Related Commands	Command	Description

Command	Description
ncs start	Start the Prime Infrastructure sever.
ncs stop	Stops the Prime Infrastructure server.
ncs status	Displays the current status of the Prime Infrastructure server.
ncs password ftpuser password	Changes the FTP username and password.

## ncs ha authkey

To enter the authentication key for high availability (HA), use the ncs ha authkey command in EXEC mode.

ncs ha authkey authorization key

Syntax Description	authorization key	The authorization key for high availability. Up to 255 alphanumeric characters.
Command Default	No default behavior or value	25.
Command Modes	EXEC	
Usage Guidelines	The ncs ha authkey comma	nd changes the authorization for the health monitor.
Examples	This example shows how to ncs ha authkey ciscol23	set up the authorization key for high availability:
<b>Related Commands</b>	Command	Description

iiiiiaiius	Command	Description
	ncs ha remove	Removes the high availability configuration settings from Prime Infrastructure.
	ncs ha status	Provides the current status of high availability.

### ncs ha remove

To remove the high availability configuration settings from Prime Infrastructure, use the **ncs ha remove** command in EXEC mode.

ncs ha remove

- **Syntax Description** This command has no arguments or keywords.
- **Command Default** No default behavior or values.
- Command Modes EXEC

**Usage Guidelines** The **ncs ha remove** command removes the high availability configuration settings from Prime Infrastructure. If you enter this command, you will see the following confirmation message:

High availability configuration will be removed. Do you wish to continue? (Y/N)  $\,$ 

<b>Related Commands</b>	ated Commands	Related
-------------------------	---------------	---------

Command	Description	
ncs ha authkey	Allows you to enter the authentication key for high availability in Prime Infrastructure. This command also changes the authorization for the health monitor.	
ncs ha status	Provides the current status of high availability.	

### ncs ha status

To display the current status of high availability (HA), use the **ncs ha status** command in EXEC mode.

ncs ha status

- **Syntax Description** This command has no arguments or keywords.
- **Command Default** No default behavior or values.
- Command Modes EXEC

Usage Guidelines Displays the current status of HA. If you enter the ncs ha status command when HA is not configured, you will see the following response: [State] Stand Alone

Command	Description	
ncs ha authkey	Allows you to enter the authentication key for high availability in Prime Infrastructure. This command also changes the authorization for the health monitor.	
ncs ha remove	Removes the high availability configuration.	

### ncs key genkey

To generate a new RSA key and self-signed certificate, use the **ncs key genkey** command. You can use this command in the following ways:

ncs key genkey

ncs key genkey -newdn

ncs key genkey -csr csrfilename

ncs key genkey -csr csrfilename repository repositoryname

Syntax Description	genkey	Generates a new RSA key and self-signed certificate. You can use the following options with this command:
		-csr: Generate Certificate Signing Request(CSR) file
		<b>-newdn</b> : Generate new RSA key and self-signed certificate with domain information
		<cr>: Carriage return.</cr>
	-newdn	Generates a new RSA key and self-signed cert with domain information. You can use the following options with this command:
		-csr: Generate Certificate Signing Request(CSR) file
		<cr>: Carriage return.</cr>
	-csr	Generates new CSR certificate file. You can use the following option with this command:
		<b><word></word></b> : Type in certificate file name (Max Size - 80)
	csrfilename	CSR filename.
	repository	Repository command. This option is available when you use the -csr option.
	repositoryname	Location where the files should be backed up to. Up to 80 alphanumeric characters.

**Command Default** No default behavior or values.

**Command Modes** EXEC

Command Reference Guide for Cisco Prime Infrastructure 2.0

#### **Examples**

This example shows how to generate new rsa key and certificate files in the Prime Infrastructure server:

```
>ncs key genkey -newdn -csr csrfile.cert repository ncs-sftp-repo
Generating RSA key
INFO: no staging url defined, using local space. rval:2
```

#### **Related Commands**

Command	Description
ncs key importcacert	Applies a CA certificate to the trust store in Prime Infrastructure.
ncs key listcacerts	Lists all of the CA certificates that exist in the Prime Infrastructure trust store.
ncs key deletecacert	Deletes a CA certificates that exist in the Prime Infrastructure trust store.
ncs key importsignedcert	Applies an RSA key and signed certificate to Prime Infrastructure.
ncs key importkey	Applies an RSA key and certificate to Prime Infrastructure.

Note

After entering this command, enter the **ncs stop** and **ncs start** command to restart the Prime Infrastructure server to make changes take effect.

### ncs key importcacert

To apply a CA certificate to a trust store in Prime Infrastructure, use the **ncs key importcacert** command in the EXEC mode.

ncs key importcacert aliasname ca-cert-filename repository repositoryname

Syntax Description	aliasname	A short name given for this CA certificate.
	ca-cert-filename	CA certificate file name.
	repository	Repository command.
	repositoryname	The repository name configured in Prime Infrastructure where the ca-cert-filename is hosted.
Command Default		
Command Default	No default behavior or	values.
Command Modes	EXEC	
Examples	This example shows h	ow to apply the CA certificate file to a trust store in the Prime Infrastructure server:
	> ncs key importcac	cert aliasl cacertfile repository ncs-sftp-repo
Note	After applying this command, enter the <b>ncs stop</b> and <b>ncs start</b> command to restart the Prime Infrastructure server to make the changes take effect.	

Command	Description	
ncs key genkey	Generates a new RSA key and self-signed certificate.	
ncs key listcacerts	Lists all of the CA certificates that exist in the Prime Infrastructure trust store.	
ncs key deletecacert	Deletes a CA certificates that exist in the Prime Infrastructure trust store.	
ncs key importsignedcert	Applies an RSA key and signed certificate to Prime Infrastructure.	
ncs key importkey	Applies an RSA key and certificate to Prime Infrastructure.	

## ncs key importkey

To apply an RSA key and signed certificate to the Prime Infrastructure, use the **ncs key importkey** command in EXEC mode.

ncs key importkey key-filename cert-filename repository repositoryname

Syntax Description	key-filename	RSA private key file name.
	cert-filename	Certificate file name.
	repository	Repository command
	repositoryname	The repository name configured in the Prime Infrastructure where the key-file and cert-file is hosted.
Command Default	No default behavior or va	lues.
Command Modes	EXEC	
Examples	This example shows how	to apply the new RSA key and certificate files to the server.
	> ncs key importkey k	eyfile certfile <b>repository</b> ncs-sftp-repo
Note	After applying this comm changes take effect.	hand, enter the <b>ncs stop</b> and <b>ncs start</b> command to restart the server to make the

#### **Related Commands**

Command	Description	
ncs key genkey	Generates a new RSA key and self-signed certificate.	
ncs key listcacerts	Lists all of the CA certificates that exist in the Prime Infratsructure trust store.	
ncs key deletecacert	Deletes a CA certificates that exist in the Prime Infratsructure trust store.	
ncs key importsignedcert	Applies an RSA key and signed certificate to Prime Infratsructure.	
ncs key importcacert	Applies an CA certificate to trust store in the Prime Infratsructure.	

### ncs key listcacerts

To list all of the CA certificates that exist in the Prime Infrastructure trust store, use the **ncs key listcacerts** command EXEC mode.

#### ncs key listcacerts

- **Syntax Description** This command has no arguments or keywords.
- **Command Default** No default behavior or values.
- **Command Modes** EXEC

Examples

This example shows how to list all of the CA certificates that exist in the Prime Infrastructure trust store:

#### > ncs key listcacerts

Certificate utnuserfirsthardwareca from CN=UTN-USERFirst-Hardware, OU=http://www.example.com, O=The USERTRUST Network, L=Salt Lake City, ST=UT, C=US Certificate gtecybertrust5ca from CN=GTE CyberTrust Root 5, OU="GTE CyberTrust Solutions, Inc.", O=GTE Corporation, C=US Certificate equifaxsecureebusinesscal from CN=Equifax Secure eBusiness CA-1, O=Equifax Secure Inc., C=US Certificate thawtepersonalfreemailca from EMAILADDRESS=email@example.com, CN=Thawte Personal Freemail CA, OU=Certification Services Division, O=Thawte Consulting, L=Cape Town, ST=Western Cape, C=ZA Certificate addrustclass1ca from CN=AddTrust Class 1 CA Root, OU=AddTrust TTP Network, O=AddTrust AB, C=SE Certificate aolrootcal from CN=America Online Root Certification Authority 1, O=America Online Inc., C=US Certificate geotrustuniversalca from CN=GeoTrust Universal CA, O=GeoTrust Inc., C=US Certificate digicertglobalrootca from CN=DigiCert Global Root CA, OU=www.example.com, O=DigiCert Inc, C=US Certificate certumtrustednetworkca from CN=Certum Trusted Network CA, OU=Certum Certification Authority, O=Unizeto Technologies S.A., C=PL Certificate swisssignsilverg2ca from CN=SwissSign Silver CA - G2, O=SwissSign AG, C=CH

Related Commands	Command	Description
	ncs key genkey	Generates a new RSA key and self-signed certificate.
	ncs key importkey	Applies an RSA key and signed certificate to the Prime Infrastructure.
	ncs key deletecacert	Deletes CA certificates that exist in the Prime Infrastructure trust store.
	ncs key importsignedcert	Applies an RSA key and signed certificate to the Prime Infrastructure.
	ncs key importcacert	Applies a CA certificate to the trust store in Prime Infrastructure.

## ncs key deletecacert

To delete CA certificates that exist in Prime Infrastructure trust store, use the **ncs key deletecacert** command in the EXEC mode.

ncs key deletecacert aliasname

Syntax Description		The short or alias name of the CA certificate which needs to be deleted from the Prime Infrastructure trust store.
Command Default	No default behavior or value	28.
Command Modes	EXEC	
Examples	This example shows how to	delete CA certificates that exist in the Prime Infrastructure trust store:
	> ncs key deletecacert Deleting certificate fr	certumtrustednetworkca com trust store

Command	Description	
ncs key genkey	Generates a new RSA key and self-signed certificate.	
ncs key importkey	Applies an RSA key and signed certificate to Prime Infrastructure.	
ncs key listcacerts	Lists all of the CA certificates that exist in the Prime Infrastructure trust store.	
ncs key importsignedcert	Applies an RSA key and signed certificate to Prime Infrastructure.	
ncs key importcacert	Applies a CA certificate to the trust store in Prime Infrastructure.	

## ncs key importsignedcert

To apply an RSA key and signed certificate, use the ncs key importsignedcert command EXEC mode.

ncs key importsignedcert signed-cert-filename repository repositoryname

Syntax Description	signed cout filename	Signad agriffacta filonoma
	signed-cert-filename	Signed certificate filename.
	repository	Repository command
	repositoryname	The repository name configured in Prime Infrastructure where the key-file and cert-file is hosted.
Command Default	No default behavior or va	alues.
Command Modes	EXEC	
Examples	This example shows how	v to apply signed certificate files to the Prime Infrastructure server:
	> ncs key importsinge	edcert signed-certfile repository ncs-sftp-repo
Note	After applying this com	nand, enter the ncs stop and the ncs start command to restart the Prime

Infrastructure server to make changes take effect.

Command	Description	
ncs key genkey	Generates a new RSA key and self-signed certificate.	
ncs key importkey	Applies an RSA key and signed certificate to Prime Infrastructure.	
ncs key deletecacert	Deletes CA certificates that exist in the Prime Infrastructure trust store.	
ncs key listcacerts	Lists all of the CA certificates that exist in the Prime Infrastructure trust store.	
ncs key importcacert	Applies a CA certificate to the trust store in Prime Infrastructure.	

### ncs cleanup

 To free up and reclaim the disk space, use the ncs cleanup command in EXEC mode.

 ncs cleanup

 Syntax Description

 This command has no arguments or keywords.

 Command Default

 No default behavior or values.

 Command Modes

 EXEC

 Usage Guidelines

 When Prime Infrastructure does not have enough disk space, an alarm is raised to free up and reclaim the disk space. If you enter the ncs cleanup command, you will see the following confirmation message:

Do you want to delete all the files in the local disk partition? (Y/N)

# ncs db sql

	To run the SQL query from the Prime Infrastructure terminal, use the ncs db sql command in EXEC mode.		
	ncs db sql query_string		
Syntax Description	<i>query_string</i> Enter the sql query string enclosed in double quotes.		
Command Default	No default behavior or values.		
Command Modes	EXEC		
Usage Guidelines	The Prime Infrastructure database server should be in running state to successfully execute this command.		
Examples	This example shows how to run a DB sql query on the Prime Infrastructure server:		
	ncs/admin# ncs db sql "select count(*) from clientcount" COUNT(*)		
	75 ncs/admin#		

### ncs db reinitdb

To reinitialize the Prime Infratsructure database, use the **ncs db reinitdb** command in EXEC mode. This command removes all data present in the database.

ncs db reinitdb

- **Syntax Description** This command has no arguments or keywords.
- **Command Default** No default behavior or values.

Command Modes EXEC

**Usage Guidelines** You can use this command if the Prime Infrastructure database becomes unstable or unusable, or if you want to remove the old data and start with a clean database.

**Examples** This example shows how to run a DB sql query on the Prime Infrastructure server:

admin# ncs db reinitdb -All data will be lost. Do you wish to continue? (y/n) y -Creating a new, empty database. This may take 10 to 20 minutes -Database re-initialization completed admin#

# nslookup

	To look up the hostname of a remote system on the Prime Infrastructure server, use the <b>nslookup</b> command in EXEC mode.		
	nslookup word		
Syntax Description	word IPv4 address or hostname of a remote system. Up to 64 alphanumeric characters.		
Command Default	No default behavior or values.		
Command Modes	EXEC		
Examples	<pre>ncs/admin# nslookup 209.165.200.225 Trying "209.165.200.225.in-addr.arpa" Received 127 bytes from 172.16.168.183#53 in 1 ms Trying "209.165.200.225.in-addr.arpa" Host 209.165.200.225.in-addr.arpa. not found: 3(NXDOMAIN) Received 127 bytes from 172.16.168.183#53 in 1 ms ncs/admin#</pre>		
	ncs/admin# nslookup 209.165.200.225 Trying "225.200.165.209.in-addr.arpa" ;; ->>HEADER<<- opcode: QUERY, status: NOERROR, id: 65283 ;; flags: qr rd ra; QUERY: 1, ANSWER: 1, AUTHORITY: 2, ADDITIONAL: 0		
	;; QUESTION SECTION: ;225.200.165.209.in-addr.arpa. IN PTR		
	;; ANSWER SECTION: 225.200.165.209.in-addr.arpa. 86400 IN PTR 209-165-200-225.got.net.		
	;; AUTHORITY SECTION: 192.168.209.in-addr.arpa. 86400 IN NS ns1.got.net. 192.168.209.in-addr.arpa. 86400 IN NS ns2.got.net.		
	Received 119 bytes from 172.16.168.183#53 in 28 ms		
	ncs/admin#		

patch install		
	To install a patch but	ndle of the application, use the <b>patch</b> command in EXEC mode.
	patch install patch-	bundle repository
Syntax Description	patch-bundle	The patch bundle file name. Up to 255 alphanumeric characters.
	repository	Repository name. Up to 255 alphanumeric characters.
Command Default	No default behavior	or values.
Command Modes	EXEC	
Usage Guidelines	The <b>patch install</b> command installs a patch bundle of the application only on a specific node where you the <b>patch install</b> command from the CLI.	
	If you attempt to insterror message:	tall a patch that is an older version of the existing patch, then you receive the following
	% Patch to be ins	talled is an older version than currently installed version.
Note	from the primary Po	cture distributed deployment environment, install the patch bundle of the application licy Administration Point (PAP) node in the Prime Infrastructure Administration user patch bundle automatically gets installed on all of the secondary nodes.
Examples	Do you want to sa Generating config Saved the running	<pre>install ncs-appbundle-1.0.2.054-3.i386.tar.gz myrepository ve the current configuration ? (yes/no) [yes] ? yes uration configuration to startup successfully ation Patch installation</pre>
	Patch successfull ncs/admin#	
	Do you want to sa	<pre>install ncs-appbundle-1.0.2.054-3.i386.tar.gz myrepository ve the current configuration ? (yes/no) [yes] ? no ation Patch installation</pre>
	Patch successfull ncs/admin#	y installed
	Do you want to sa Generating config Saved the running	<pre>install ncs-appbundle-1.0.2.054-2.i386.tar.gz disk ve the current configuration ? (yes/no) [yes] ? yes uration configuration to startup successfully ation Patch installation</pre>

 $\ensuremath{\$}$  Patch to be installed is an older version than currently installed version. ncs/admin#

**Related Commands** 

	Description
patch remove	Removes a specific patch bundle version of the application.
show version	Displays information about the currently loaded software version, along with hardware and device information.

### patch remove

To remove a specific patch bundle version of the application, use the **patch remove** command in EXEC mode.

patch remove word word

ntax Description	word	The name of the application for which the patch is to be removed. Up to 255 alphanumeric characters.
	word	The patch version number to be removed. Up to 255 alphanumeric characters.
ommand Default	No default behavior o	or values.
ommand Modes	EXEC	
sage Guidelines	Removes a specific p	atch bundle of the application.
-	r r r r r r	
-		ove a patch that is not installed, then you receive the following error message:
		ove a patch that is not installed, then you receive the following error message:

Command	Description
patch install	Installs a specific patch bundle of the application.
show version	Displays information about the currently loaded software version, along with hardware and device information.

OL-30228-01

### ping

To diagnose the basic IPv4 network connectivity to a remote system, use the **ping** command in EXEC mode.

ping {ip-address | hostname} [Dfdf][packetsizepacketsize][pingcountpingcount]

Syntax Description	<i>ip-address</i> IP	address of the system to ping. Up to 32 alphanumeric characters.
	hostname Ho	ostname of the system to ping. Up to 32 alphanumeric characters.
	df Sp	ecification for packet fragmentation.
		ecifies the value as <b>1</b> to prohibit packet fragmentation, or <b>2</b> to fragment the ckets locally, or <b>3</b> to not set df.
	packetsize Siz	ze of the ping packet.
	packetsize Sp	ecifies the size of the ping packet; the value can be between 0 and 65507.
	pingcount Nu	imber of ping echo requests.
	pingcount Sp	ecifies the number of ping echo requests; the value can be between 1 and 10.
Command Default	No default behavior or values	
Command Modes	EXEC	
Usage Guidelines		echo request packet to an address, then awaits a reply. The ping output can help ability, delays over the path, and whether you can reach a host.
Examples	PING 172.16.0.1 (172.16.0 18 bytes from 172.16.0.1:	1 df 2 packetsize 10 pingcount 2 .1) 10(38) bytes of data. icmp_seq=0 ttl=40 time=306 ms icmp_seq=1 ttl=40 time=300 ms
		stics received, 0% packet loss, time 1001ms 0.302/303.557/306.812/3.255 ms, pipe 2
<b>Related Commands</b>	Command	Description
	ping6	Pings a remote IPv6 address.
	r O	

## ping6

To diagnose the basic IPv6 network connectivity to a remote system, use the **ping6** command in EXEC mode.

ping6 {ip-address | hostname} [GigabitEthernetpacketsizepacketsize][pingcountpingcount]

Syntax Description	ip-address	IP address of the system to ping. Up to 64 alphanumeric characters.
	hostname	Hostname of the system to ping. Up to 64 alphanumeric characters.
	GigabitEthernet	Selects the ethernet interface.
	packetsize	Size of the ping packet.
	packetsize	Specifies the size of the ping packet; the value can be between 0 and 65507.
	pingcount	Number of ping echo requests.
	pingcount	Specifies the number of ping echo requests; the value can be between 1 and 10.
Command Default	No default behavior or	values.
Command Modes	EXEC	
Usage Guidelines	1 8	and sends an echo request packet to an address, then awaits a reply. The ping output ath-to-host reliability, delays over the path, and whether you can reach a host.
	fragmentation (df in IPv is primarily useful for pi	and is similar to the existing IPv4 ping command that does not support the IPv4 ping v4) options, but allows an optional specification of an interface. The interface option nning with link-local addresses that are interface-specific. The packetsize and pingcount y the same as they do with the IPv4 command.
Examples	PING 3ffe:302:11:2:2 3ffe:302:11:2:20c:29 64 bytes from 3ffe:3 64 bytes from 3ffe:3 64 bytes from 3ffe:3	<pre>Fe:302:11:2:20c:29ff:feaf:da05 20c:29ff:feaf:da05(3ffe:302:11:2:20c:29ff:feaf:da05) from 9ff:feaf:da05 eth0: 56 data bytes 302:11:2:20c:29ff:feaf:da05: icmp_seq=0 ttl=64 time=0.599 ms 302:11:2:20c:29ff:feaf:da05: icmp_seq=1 ttl=64 time=0.150 ms 302:11:2:20c:29ff:feaf:da05: icmp_seq=2 ttl=64 time=0.070 ms 302:11:2:20c:29ff:feaf:da05: icmp_seq=3 ttl=64 time=0.065 ms</pre>

ncs/admin#

	Description
ping	Pings a remote IP address.

## reload

	To reload the Prime Infrastructure operating system, use the reload command in EXEC mode.
	reload
Syntax Description	This command has no arguments or keywords.
Command Default	The command has no default behavior or values.
Command Modes	EXEC
Usage Guidelines	The <b>reload</b> command reboots the system. Use the <b>reload</b> command after you enter configuration information into a file and save the running-configuration to the persistent startup-configuration on the CLI and save any settings in the web Administration user interface session.
	Before you enter the <b>reload</b> command, ensure that the Prime Infrastructure is not performing any backup, restore, installation, upgrade, or remove operation. If the Prime Infrastructure performs any of these operations and you enter the <b>reload</b> command, you will notice any of the following warning messages:
	WARNING: A backup or restore is currently in progress! Continue with reload?
	WARNING: An install/upgrade/remove is currently in progress! Continue with reload? If you get any of these warnings, enter YES to halt the operation, or enter NO to cancel the halt.
	If no processes are running when you use the <b>reload</b> command or you enter YES in response to the warning message displayed, the Prime Infrastructure asks you to respond to the following option:
	Do you want to save the current configuration ? Enter YES to save the existing Prime Infrastructure configuration. The Prime Infrastructure displays the following message:
	Saved the running configuration to startup successfully
Examples	ncs/admin# <b>reload</b> Do you want to save the current configuration ? (yes/no) [yes] ? yes Generating configuration Saved the running configuration to startup successfully Continue with reboot? [y/n] y Broadcast message from root (pts/0) (Fri Aug 7 13:26:46 2010):
	The system is going down for reboot NOW!
	ncs/admin#

5	Command	Description
	halt	Disables the system.

### restore

To perform a restore of a previous backup, use the **restore** command in EXEC mode.

Use the following command to restore data related to the Prime Infrastructure application and Cisco ADE OS:

restore filename repository repository-name

Use the following command to restore data related only to the Prime Infrastructure application:

restore filenamerepository-nameapplicationapplication

Curtos Deservintion				
Syntax Description	filename		Name of the backed-up file that resides in the repository. Up to 120 alphanumeric characters.	
		Note	You must add the .tar.gpg extension after the filename (for example, myfile.tar.gpg).	
	repository	The re	pository keyword.	
	repository-name	Name of the repository you want to restore from backup. The application keyword.		
	application			
	application name	The na	me of the application data to be restored. Up to 255 alphanumeric characters.	
		Note	Enter the application name as 'PI' in upper case.	
Command Default	No default behavior or	values.		
Command Modes	EXEC			
Usage Guidelines	a restore of a previous	backup of t	elated to the Prime Infrastructure as well as the Cisco ADE OS. To perform the application data of the Prime Infrastructure only, add the <b>application</b> in EXEC mode. To remove this function, use the <b>no</b> form of this command.	

When you use these two commands in the Prime Infrastructure, the Prime Infrastructure server restarts automatically.

#### **Examples**

ncs/admin# restore mybackup-100818-1502.tar.gpg repository myrepository Restore may require a reboot to successfully complete. Continue? (yes/no) [yes] ? yes Stopping NCS Monitoring & Troubleshooting Log Processor... Stopping NCS Monitoring & Troubleshooting Log Collector... Stopping NCS Monitoring & Troubleshooting Alert Process... Stopping NCS Monitoring & Troubleshooting Session Database... Stopping NCS Application Server... Stopping NCS Database processes...

```
Starting NCS Database processes...
Starting NCS Application Server...
Starting NCS Monitoring & Troubleshooting Session Database...
Starting NCS Monitoring & Troubleshooting Log Collector...

ncs/admin#

#### **Related Commands**

Command	Description
backup	Performs a backup (Prime Infrastructure and Cisco ADE OS) and places the backup in a repository.
backup-logs	Backs up system logs.
repository	Enters the repository submode for configuration of backups.
show repository	Displays the available backup files located on a specific repository.
show backup history	Displays the backup history of the system.

# rmdir

	To remove an existing directory, use the <b>rmdir</b> command in EXEC mode.				
	rmdir word				
Syntax Description	word Directory name. Up to 80 alphanumeric characters.				
Command Default	No default behavior or values.				
Command Modes	EXEC				
Examples	ncs/admin# <b>mkdir disk:/test</b> ncs/admin# dir Directory of disk:/ 4096 May 06 2010 13:34:49 activemq-data/				
	4096 May 06 2010 13:40:59 logs/ 16384 Mar 01 2010 16:07:27 lost+found/ 4096 May 06 2010 13:42:53 target/ 4096 May 07 2010 12:26:04 test/				
	Usage for disk: filesystem 181067776 bytes total used 19084521472 bytes free 20314165248 bytes available ncs/admin#				
	ncs/admin# <b>rmdir disk:/test</b> ncs/admin# dir				
	Directory of disk:/				
	4096 May 06 2010 13:34:49 activemq-data/ 4096 May 06 2010 13:40:59 logs/ 16384 Mar 01 2010 16:07:27 lost+found/ 4096 May 06 2010 13:42:53 target/				
	Usage for disk: filesystem 181063680 bytes total used 19084525568 bytes free 20314165248 bytes available ncs/admin#				

### **Related Commands**

Command	Description
dir	Displays a list of files on the Prime Infrastructure server.
mkdir	Creates a new directory.

### root

This command has no arguments or keywords.

To execute the root shell, use the **root** command in EXEC mode.

Note	

For developer use only, not for end users.

root

**Syntax Description** This command has no arguments or keywords.

**Command Default** No default behavior or values.

Command Modes EXEC

**Usage Guidelines** Requires installation of the root\_enable application or patch. The **root** command prompts for the password used with root\_enable and puts you in a bash shell with root privileges.

There are no defaults for the password.

If the password is already set, the **root\_enable** command generates the following error message:

% Error : root patch password already set If the password is not set, the root command generates the following error message:

% Error : root patch password not set.

Note

This command and the **root\_enable** command can only be used on the Prime Infrastructure locally hard-wired console port via Telnet. If you try to access this port over a LAN via SSH or Telnet, the commands are disallowed and the following message appears: % Error : root patch only available on a console port.

**Examples** 

The following example illustrates the use of the **root** command:

ncs/admin# root
% Error : root patch password not set

#### **Related Commands**

ıds	Command	Description
	root_enable	Activates the <b>root</b> command.

## root\_disable

To disable the root user restoring admin shell access, use the root\_disable command in the EXEC mode.

Note	For developer use only, not for end users.		
	root_disable		
Syntax Description	This command has no arguments or keywords.		
Command Default	No default behavior or values.		
Command Modes	EXEC		
Usage Guidelin			
 Note	This command and the <b>root_enable</b> command can only be used on the Prime Infrastructure locally hard-wired console port via Telnet. If you try to access this port over a LAN via SSH or Telnet, the commands are disallowed and the following message appears: % Error : root patch only available on a console port.		
Examples	The following example illustrates the use of the <b>root_disable</b> command: ncs/admin# root_disable		
<b>Related Commands</b>	Command	Description	
	root_enable	Executes the root shell.	

## root\_enable

To activate the **root** command, use the **root\_enable** command in the EXEC mode.

Note	For developer use only, not for end users.		
	root_enable		
Syntax Description	or keywords.		
Command Default	No default behavior or values.		
Command Modes	EXEC		
<b>Usage Guidelines</b> Requires installation of the root_enable application or patch. The <b>roo</b> used with root_enable and puts you in a bash shell with root privileg		enable application or patch. The <b>root</b> command prompts for the password ou in a bash shell with root privileges.	
	There are no defaults for the pass	sword.	
	If the password is already set, the <b>root_enable</b> command generates the following error message:		
	<pre>% Error : root patch password already set If the password is not set, the root command generates the following error message:</pre>		
	% Error : root patch passwor	rd not set	
Note			
<b>Examples</b> The following example illustrates the use of the <b>root_enable</b> command:		s the use of the <b>root_enable</b> command:	
	ncs/admin# root_enable % Error : root patch passwor	rd already set	
Related Commands	Command	Description	
	root	Executes the root shell.	

### show

To show the running system information, use the **show** command in EXEC mode. The **show** commands are used to display the Prime Infrastructure settings and are among the most useful commands.

The commands in Table A-6 require the **show** command to be followed by a keyword; for example, **show application status**. Some **show** commands require an argument or variable after the keyword to function; for example, **show application version**.

For detailed information on all of the Prime Infrastructure **show** commands, see show Commands. **show** keyword

#### **Syntax Description**

#### Table 14: Summary of show Commands

Command(1)	Description	
application	Displays information about the installed application; for example, status or version	
(requires keyword)(2)		
backup	Displays information about the backup.	
(requires keyword)		
cdp	Displays information about the enabled Cisco Discovery Protocol interfaces.	
(requires keyword)		
clock	Displays the day, date, time, time zone, and year of the system clock.	
сри	Displays CPU information.	
disks	Displays file-system information of the disks.	
interface	Displays statistics for all of the interfaces configured on the Cisco ADE OS.	
logging	Displays system logging information.	
(requires keyword)		
logins	Displays login history.	
(requires keyword)		
memory	Displays memory usage by all running processes.	
ntp	Displays the status of the Network Time Protocol (NTP).	
ports	Displays all of the processes listening on the active ports.	
process	Displays information about the active processes of the Prime Infrastructure server.	

Command(1)	Description	
repository	Displays the file contents of a specific repository.	
(requires keyword)		
restore	Displays restore history on the Prime Infrastructure server.	
(requires keyword)		
running-config	Displays the contents of the currently running configuration file on the Prime Infrastructure server.	
startup-config	Displays the contents of the startup configuration on the Prime Infrastructure server.	
tech-support	Displays system and configuration information that you can provide to the TAC when you report a problem.	
terminal	Displays information about the terminal configuration parameter settings for the current terminal line.	
timezone	Displays the time zone of the Prime Infrastructure server.	
timezones	Displays all of the time zones available for use on the Prime Infrastructure server.	
udi	Displays information about the unique device identifier (UDI) of the Prime Infrastructure.	
uptime	Displays how long the system you are logged in to has been up and running.	
users	Displays information for currently logged in users.	
version	Displays information about the installed application version.	
<u>12</u>		

1 (1) The commands in this table require that the show command precedes a keyword; for example, show application.

2 (2) Some show commands require an argument or variable after the keyword to function; for example, show application version. This show command displays the version of the application installed on the system (see show application ).

Command DefaultNo default behavior or values.Command ModesEXECUsage GuidelinesAll show commands require at least one keyword to function.Examplesncs/admin# show application

<name> <Description> ncs Cisco Network Control System ncs/admin#

### ssh

To start an encrypted session with a remote system, use the ssh command in EXEC mode.

An Admin or Operator (user) can use this command (see Table 3: Command Privileges).

ssh [ip-address | hostname] usernameport[number]version[1|2] delete hostkeyword

Syntax Description	ip-address	IP address of the remote system. Up to 64 alphanumeric characters.
	hostname	Hostname of the remote system. Up to 64 alphanumeric characters.
	username	Username of the user logging in through SSH.
	<pre>port [number]</pre>	(Optional) Indicates the port number of the remote host. From 0 to 65,535. Default 22.
	<b>version</b> [1   2]	(Optional) Indicates the version number. Default 2.
	delete hostkey	Deletes the SSH fingerprint of a specific host.
	word	IPv4 address or hostname of a remote system. Up to 64 alphanumeric characters.
Command Default	Disabled.	
Command Modes	EXEC (Admin or Op	erator).
Usage Guidelines	The <b>ssh</b> command enables a system to make a secure, encrypted connection to another remote system or server. This connection provides functionality similar to that of an outbound Telnet connection except that the connection is encrypted. With authentication and encryption, the SSH client allows for secure communication over an insecure network.	
Examples	ncs/admin# <b>ssh ncs</b> admin@ncs1's passv Last login: Wed Ju ncs1/admin#	
	ncs/admin# <b>ssh del</b> ncs/admin#	lete host ncs

# tech dumptcp

To dump a Transmission Control Protocol (TCP) package to the console, use the **tech dumptcp** command in EXEC mode.

tech dumptcp gigabit-ethernet

Syntax Description	gigabit-ethernet Gigabit Ethernet interface number 0 to 1.
Command Default	Disabled
oominana boraan	
<b>Command Modes</b>	EXEC
Examples	ncs/admin# tech dumptcp 0
	140816:141088(272) ack 1921 win 14144
	08:26:12.034630 IP NCS.cisco.com.ssh > dhcp-64-102-82-153.cisco.com.2221: P 141088:141248(160)
	ack 1921 win 14144

	08:26:12.034796 IP NCS.cisco.com.ssh > dhcp-64-102-82-153.cisco.com.2221: P 141952:142112(160) ack 1921 win 14144
	1000 packets captured
	1000 packets received by filter
	0 packets dropped by kernel
	ncs/admin#

## telnet

To log in to a host that supports Telnet, use the telnet command in operator (user) or EXEC mode.

**telnet** [ip-address | hostname] port number

Syntax Description	ip-address	IP address of the remote system. Up to 64 alphanumeric characters.
<i>hostname</i> Hostname of the rer		Hostname of the remote system. Up to 64 alphanumeric characters.
port number (O		(Optional) Indicates the port number of the remote host. From 0 to 65,535.

**Command Default** No default behavior or values.

**Command Modes** EXEC

### **Examples**

OL-30228-01

ncs/admin# **telnet 172.16.0.11 port 23** ncs.cisco.com login: **admin** password: Last login: Mon Jul 2 08:45:24 on ttyS0 ncs/admin#

# terminal length

To set the number of lines on the current terminal screen for the current session, use the **terminal length** command in EXEC mode.

terminal length integer

Syntax Description	integer	Number of lines on the screen. Contains between 0 to 511 lines, inclusive. A value of zero (0) disables pausing between screens of output.
Command Default	24 lines.	
Command Modes	EXEC	
Usage Guidelines	The system uses the length	value to determine when to pause during multiple-screen output.
Examples	ncs/admin# <b>terminal le</b> ncs/admin#	ngth 0

## terminal session-timeout

To set the inactivity timeout for all sessions, use the terminal session-timeout command in EXEC mode.

terminal session-timeout minutes

Syntax Description	minutes       Sets the number of minutes for the inactivity timeout. From 0 to 525,600. Zero (0) disables the timeout.			
Command Default	30 minutes.			
Command Modes	EXEC			
Usage Guidelines	Setting the <b>terminal session-timeout</b> command to zero (0) results in no timeout being set.			
Examples	ncs/admin# <b>terminal session-timeout 40</b> ncs/admin#			
<b>Related Commands</b>	Command	Description		
	terminal session-welcome	Sets a welcome message on the system for all users who log in to the		

system.

### terminal session-welcome

To set a welcome message on the system for all users who log in to the system, use the **terminal session-welcome** command in EXEC mode.

terminal session-welcome string

Syntax Description	string	Welcome message. Up to 2,048 alphanumeric characters.	
Command Default	No default behavior or values.		
Command Modes	EXEC		
Usage Guidelines	Specify a message using up to 20	048 characters.	
Examples	ncs/admin# <b>terminal session-welcome Welcome</b> ncs/admin#		
Related Commands	Command	Description	

Sets the inactivity timeout for all sessions.

terminal session-timeout

# terminal terminal-type

To specify the type of terminal connected to the current line for the current session, use the **terminal terminal-type** command in EXEC mode.

terminal terminal-type type

Syntax Description	<i>type</i> Defines the terminal name and type, and permits terminal negotiation by hosts that provide that type of service. Up to 80 alphanumeric characters.	
Command Default	VT100.	
Command Modes	EXEC	
Usage Guidelines	Indicate the terminal type if it is different from the default of VT100.	
Examples	ncs/admin# <b>terminal terminal-type vt220</b> ncs/admin#	

### traceroute

To discover the routes that packets take when traveling to their destination address, use the **traceroute** command in EXEC mode.

traceroute [ip-address | hostname]

Syntax Description	<i>ip-address</i> IP address of the remote system. Up to 32 alphanumeric characters.			
	hostname	Hostname of the remote system. Up to 32 alphanumeric characters.		
Command Default	No default behavior	r or values.		

### Command Modes EXEC

### **Examples**

ncs/admin# traceroute 172.16.0.11
traceroute to 172.16.0.11 (172.16.0.11), 30 hops max, 38 byte packets
1 172.16.0.11 0.067 ms 0.036 ms 0.032 ms

ncs/admin#

## undebug

To disable debugging functions, use the **undebug** command in EXEC mode.

**undebug** {*all* | *application* | *backup-restore* | *cdp* | *config* | *copy* | *icmp* | *locks* | *logging* | *snmp* | *system* | *transfer* | *user* | *utils*}

Syntax Description	all	Disables all debugging.			
	application	Application files.			
		• <i>all</i> —Disables all application debug output.			
		• <i>install</i> —Disables application install debug output.			
		• operation—Disables application operation debug output.			
		• <i>uninstall</i> —Disables application uninstall debug output.			
	backup-restore	Backs up and restores files.			
		• <i>all</i> —Disables all debug output for backup-restore.			
		• <i>backup</i> —Disables backup debug output for backup-restore.			
		• backup-logs—Disables backup-logs debug output for backup-restore.			
		• <i>history</i> —Disables history debug output for backup-restore.			
		• restore—Disables restore debug output for backup-restore.			
	cdp	Cisco Discovery Protocol configuration files.			
		• all—Disables all Cisco Discovery Protocol configuration debug output.			
		• config—Disables configuration debug output for Cisco Discovery Protocol.			
		• <i>infra</i> —Disables infrastructure debug output for Cisco Discovery Protocol.			

config	Configuration files.			
	• <i>all</i> —Disables all configuration debug output.			
	• <i>backup</i> —Disables backup configuration debug output.			
	• <i>clock</i> —Disables clock configuration debug output.			
	• <i>infra</i> —Disables configuration infrastructure debug output.			
	• <i>kron</i> —Disables command scheduler configuration debug output.			
	• network—Disables network configuration debug output.			
	• repository—Disables repository configuration debug output.			
	• <i>service</i> —Disables service configuration debug output.			
сору	Copy commands.			
icmp	ICMP echo response configuration.			
	<i>all</i> —Disable all debug output for ICMP echo response configuration. Set level between 0 and 7, with 0 being severe and 7 being all.			
locks	Resource locking.			
	• <i>all</i> —Disables all resource locking debug output.			
	• <i>file</i> —Disables file locking debug output.			
logging	Logging configuration files.			
	all—Disables all debug output for logging configuration.			
snmp	SNMP configuration files.			
	all—Disables all debug output for SNMP configuration.			
system	System files.			
	• <i>all</i> —Disables all system files debug output.			
	• <i>id</i> —Disables system ID debug output.			
	• <i>info</i> —Disables system info debug output.			
	• <i>init</i> —Disables system init debug output.			
transfer	File transfer.			
user	User management.			
	• all—Disables all user management debug output.			
	<ul> <li>password-policy—Disables user management debug output for password-policy.</li> </ul>			

debug

	utils     Utilities configuration files.       all—Disables all utilities configuration debug output.		
Command Default	No default behavior or values.		
Command Modes	EXEC		
Examples	ncs/admin# <b>undebug all</b> ncs/admin#		
<b>Related Commands</b>	Command	Description	

Displays errors or events for command situations.

## write

To copy, display, or erase Prime Infrastructure server configurations, use the **write** command with the appropriate argument in EXEC mode.

write {erase | memory | terminal}

Syntax Description	erase	Erases the startup configuration.			
	memory	Copies the running configuration to the startup configuration.			
	terminal	Copies the running configuration to console.			
Command Default	No default behavio	r or values.			
Command Modes	EXEC				
Examples	The following is an	n example of the write command with the memory keyword:			
	ncs/admin# <b>write memory</b> Generating configuration ncs/admin#				
	The following is an example of the write command with the terminal keyword:				
	ncs/admin# <b>write</b>	terminal

## **Cisco Plug and Play Gateway Commands**

This section lists the **pnp** commands along with a brief description of their use, command defaults, command modes, command syntax, usage guidelines, command examples, and related commands, where applicable.

### **Prime Infrastructure Integrated Server Commands**

This section lists the **ncs pnp gateway commands** along with a brief description of its use, command defaults, command modes, command syntax, usage guidelines, command examples, and related commands, where applicable.

#### ncs pnp-gateway

To enable or disable the local Cisco Plug and Play Gateway on the Prime Infrastructure Integrated Server and modify or view the properties of the software image on the Cisco Plug and Play Gateway, use the **ncs pnp-gateway** command in privileged EXEC mode.

ncs pnp-gateway {enable | disable | modify | property}

Syntax Description	enable	Enables the Cisco Plug and Play Gateway.
	disable	Disables the Cisco Plug and Play Gateway.
	modify	Enables the modification of the Cisco Plug and Play Gateway image's properties. The properties that can be modified are: activation timeout value, distribution timeout value, and transfer timeout value.
	property	Enables viewing of the properties pertaining to the software image on the Cisco Plug and Play Gateway.

### **Command Modes** Privileged EXEC

Command History				
<b>Command History</b>	Release		Modification	
	Cisco Prime Infrastruc	cture 2.0	This command was introduced.	
Examples	The following is sample output from the ncs pnp-gateway command:			
	admin# ncs pnp-gat	eway?

Examples	The following is sample	e output from the ncs pnp	-gateway disable command:	
	ncs pnp-gateway disable			
	Disabling Plug and Plug and Play Gatew server		oled. Please restart Prime Infrastructure on this	
Examples	The following is a sam		gateway enable command:	
	Enabling Plug and Play Gateway			

Plug and Play Gateway is successfully enabled. Please restart Prime Infrastructure on this server. **Examples** The following is a sample output of the ncs pnp-gateway modify command: ncs pnp-gateway modify bgl-dt-ncs-vm6-70/ayyanna# ncs pnp-gateway modify image ? activation-timeout Activation timeout for PnP image upgrade job distribution-timeout Distribution timeout for PnP image upgrade job Transfer timeout for PnP image upgrade job transfer-timeout bgl-dt-ncs-vm6-70/ayyanna# ncs pnp-gateway modify image activation-timeout ? <60-1048576> Type the image activation timeout value (seconds) **Examples** The following is a sample output of the **ncs pnp-gateway property image** command: admin# ncs pnp-gateway property image PnP Gateway Image Transfer Timeout = 2400 PnP Gateway Image Distribution Timeout = 2200 PnP Gateway Image Activation Timeout = 1600

### Prime Infrastructure PnP Gateway Standalone Server Command

This section lists the **pnp gateway standalone server commands** along with a brief description of their use, command defaults, command modes, command syntax, usage guidelines, command examples, and related commands, where applicable.

pnp backup

	To create a backup of the Cisco Plug and Play Gateway configuration, use the <b>pnp backup</b> command in privileged EXEC mode.			
	pnp backup			
Command Modes	Privileged EXEC			
Command History	Release	Modification		
	Cisco Prime Infrastructure 1.2	This command was introduced.		
	Cisco Prime Infrastructure 2.0	This command was modified.		
Usage Guidelines	The backup file is usually created in a compressed tar the <i>/localdisk/ directory</i> on the Linux file system.	file format in the <i>disk:/ directory</i> that corresponds to		
Examples	The following is sample output from the <b>pnp backup</b> command:			
	admin# <b>pnp backup</b>			
	The backup file created : /localdisk/20130130	-		
	The following table describes the significant field shown in the display.			
	Table 15: pnp backup Field Description			
	Field	Description		

20130130220403.pnp\_backup.tar.gz

The backup file created in the above example, where 2013 is the year, 01 is the month, 30 is the date, 22 is the hour, 04 is the minute, and 03 is the second at

which the backup file was created.

### pnp modify image

To modify the properties of the Cisco Plug and Play Gateway software image in the Prime Infrastructure Plug and Play Standalone Gateway, use the **pnp modify image** command in privileged EXEC mode.

pnp modify image {activation-timeout | distribution-timeout | transfer-timeout |
transfer-timeout}timeout-value

Syntax Description	activation timeout value	Activation timeout value, in seconds, for the Cisco Plug and Play Gateway software image upgrade job. The range is from 60 to 1048576. The default is 600.
	distribution timeout value	Distribution timeout value, in seconds, for the Cisco Plug and Play Gateway software image upgrade job. The valid range is from 60 to 1048576. The default is 1200.
	transfer timeout value	Transfer timeout value, in seconds, for the Cisco Plug and Play Gateway software image upgrade job. The valid range is from 60 to 1048576. The default is 1200.

### **Command Modes** Privileged EXEC

0				
Command History	Release		Modification	
	Cisco Prime Infrastructure	1.2	This command was introduced.	
	Cisco Prime Infrastructure	2.0	This command was modified.	
Usage Guidelines Examples	The Cisco Plug and Play Gateway does not have to be restarted for the timeout value to take effect. The timeout value that you specify will take effect for the next software image. The following is sample output from the <b>pnp modify image</b> command:			
	admin# <b>pnp modify image</b>	s ?		
	activation-timeout distribution-timeout transfer-timeout	oution-timeout Distribution timeout for PnP image upgrade job		
	admin# <b>pnp modify image</b> Done	activation-timeout 1200		
	admin# <b>pnp modify image</b> Done	e distribution-timeout 2400		

admin# **pnp modify image transfer-timeout 2200** Done

#### pnp modify log-level

To modify the log-level settings of the Cisco Plug and Play Gateway, use the **pnp modify log-level** command in privileged EXEC mode.

The Cisco Plug and Play Gateway supports these log levels: debug, error, fatal, info, trace, and warn.

pnp modify log-level {fatal | error | warn | info | debug | trace}

Syntax Description	fatal	Enables the collection of fatal-level log mess	sages.	
	error	Enables the collection of fatal-level and error-level log messages.		
	warn	Enables the collection of fatal-level, error-level, and warn-level log messages.		
	info	Enables the collection of fatal-level, error-le log messages.	vel, warn-level, and information-level	
	debug	Enables the collection of fatal-level, error-le debug-level log messages.	vel, warn-level, information-level, and	
	trace	Enables the collection of fatal-level, error-le debug-level, and trace-level log messages.	vel, warn-level, information-level,	
Command Default Command Modes	By default, the operation of the operati	Cisco Plug and Play Gateway logs the error-level log C	g messages.	
<b>Command History</b>	Release		Modification	
	Cisco Prime In	frastructure 1.2	This command was introduced.	
	Cisco Prime In	frastructure 2.0	This command was modified.	
Usage Guidelines		fy log-level command can be used to dynamically ch t the Cisco Plug and Play Gateway, it will reset to th	• •	

### **Examples** The following is sample output from the **pnp modify log-level** command:

admin# pnp modify log-level ?

debug Log level: Debug error Log level: Error fatal Log level: Fatal

info		g level			
trace	e Log	g level	l: Trac	ce	
warn	Log	g level	L: Warr	l	
admin#		-	_		-
admin#	pnp 1	nodify	log-le	evel	error
admin#	pnp 1	modify	log-le	evel	fatal
admin#	pnp 1	nodify	log-le	evel	info
admin#	pnp 1	nodify	log-le	evel	trace
admin#	<b>nnn</b> 1	nodify	$10\sigma - 1e$	ave 1	warn

pnp restore

hih lestore			
	To restore the configuration settings from an existing backup of the Cisco Plug and Play Gateway, use the <b>pnp restore</b> command in privileged EXEC mode. To force a restore of the Cisco Plug and Play Gateway settings either when the <b>pnp setup</b> command is in operation or another instance of the <b>pnp restore</b> command is already running, use the <b>pnp restore force</b> command in privileged EXEC mode.		
	pnp restore backup file	ename	
	pnp restore force		
Syntax Description	backup filename	Name of the Cisco Plug and P must be restored.	lay Gateway backup file whose server settings
	force	Forces a restore of the Cisco P	Plug and Play Gateway settings.
Command History	Release		Modification
Command History	Kelease Cisco Prime Infrastructi	ure 1 2	This command was introduced.
	Cisco Prime Infrastruct		This command was modified.
Usage Guidelines	there is more than one ba You must provide the na	ackup file in the <i>/localdisk/ directory</i> , une of the backup file that is to be use	e backup files from the <i>/localdisk/ directory</i> . If a list of the available backup files is displayed. ed for restoring the configuration settings. tored, you are prompted to commit the changes.
		nanges or <b>n</b> to cancel the restore opera	
Note	You must restart the Cis	co Plug and Play Gateway for change	es to take effect.
<b></b>			

Use the **pnp restore force** command when you have to force a restore operation. This condition is normally seen when different instances of the **restore** command is already running or when the **pnp setup** command is in operation. The **pnp restore force** command forces the restore operation using an existing backup file.

#### **Examples** The following is a sample output of the **pnp restore** command:

admin# pnp restore

Commit changes and restart (y/n): y

#### pnp setup

▲

To set up the Cisco Plug and Play Gateway information, use the **pnp setup** command in privileged EXEC mode.

To forcefully execute a setup operation of the Cisco Plug and Play Gateway when other commands are running and the **pnp setup** command cannot be used for setting up the server, use the **pnp setup force** command in privileged EXEC mode.

Note	The <b>pnp setup</b> command can be executed only if Prime Infrastructure and the Cisco Plug and Play Gateway are running on different servers.			
	pnp setup			
	pnp setup force			
Syntax Description	force Executes a setu	up operation of the Cisco Plug and Play Gateway forcefully.		
Command Modes	Privileged EXEC			
Command History	Release	Modification		
	Cisco Prime Infrastructure 1.2	This command was introduced.		
	Cisco Prime Infrastructure 2.0	This command was modified.		
Usage Guidelines	The setup.log file is available in the var	/KickStart/install/ directory.		
Examples	The following is sample output from the <b>pnp setup</b> command:			
	<pre>admin# pnp setup     #################################</pre>			
		Certificate is possible if		
	Automatically download the certificate for server 10.104.105.70 (y/n) [y] $% \left[ \left( y'' \right) \right] = \left[ \left( y'' \right) \right] \left[ \left( y'' \right) \left[ \left( y'' \right) \right] \left[ \left( y'' \right) \right] \left[ \left( y'' \right) \left[ \left( y'' \right) \right] \left[ \left( y'' \right) \right] \left[ \left( y'' \right) \left[ \left( y'' \right) \right] \left[ \left( y'' \right) \left[ \left( y'' \right) \right] \left[ \left( y'' \right) \left[ \left( y'' \right) \left[ \left( y'' \right) \right] \left[ \left( y'' \right) \left[ \left( y''$			

The maximum number of Event Gateways allowed is '10' for both plain text and ssl combined. The Event Gateway ports 11011 and 11012 are reserved for port automatic allocation. These ports are not counted while taking the maximum number of ports. Each Event Gateway can serves up to a maximum of 1000 devices. Enter number of Event Gateways that will be started with crypto operation: [5] The maximum number of plain text event gateways ports possible is 5. Enter number of Event Gateways that will be started with plaintext operation: [5] The CNS Event command configures how the managed devices should connect to this particular Plug and Play Gateway. The command entered in the following line should match what's configured on the devices WITHOUT the port number and keyword 'encrypt' if cryptographic is enabled. For example, if the following CLI is configured on devices "cns event bgl-dt-ncs-vm64-228 encrypt 11012 keepalive 120 2 reconnect 10", then `encrypt 11012` should be removed and the below line should be entered : "cns event bgl-dt-ncs-vm64-228 keepalive 120 2 reconnect 10" Another example, if this is a backup Plug and Play Gateway and the following CLI is configured on devices "cns event bgl-dt-ncs-vm64-228 11011 source Vlan1 backup", then `11011` should be removed and the below line should be entered : "cns event bgl-dt-ncs-vm64-228 source Vlan1 backup" Unable to enter a correct CLI could cause the managed devices not be able to connect to this Plug and Play Gateway. For details, please refer to Installation and Configuration Guide. Enter CNS Event command: [cns event bgl-dt-ncs-vm64-228 keepalive 120 2 reconnect 10] Commit changes (y/n): y Attempting to disable the local Plug and Play Gateway in Prime Infrastructure Machine 10.104.105.70 Enter the username to login to the Prime Infrastructure Machine: [admin] ayyanna Enter the password to login to the Prime Infrastructure Machine: Operation Successful. Plug and Play Gateway is successfully disabled. Setup is in progress..... Stop Plug and Play Gateway server Done. Plug and Play Gateway setup completed Start Plug and Play Gateway server.... Done. Plug and Play Gateway server started! \*\*\*\*\* Disabling the local Plug and Play Gateway on Prime Infrastructure server is successful. Please restart the Prime Infrastructure server. \*\*\*\*\* bgl-dt-ncs-vm64-228/admin# Note For more information on how to copy files from the local disk, see copy, on page 51 command.

pnp setup advanced

	To change port level se	t level settings, use the <b>pnp setup advanced</b> command in the privileged EXEC mode.		
	To forcefully execute a setup operation of the Cisco Plug and Play Gateway when other commands are and the <b>pnp setup advanced</b> command cannot be used for setting up the server, use the <b>pnp setup ad</b> <b>force</b> command in privileged EXEC mode.			
	pnp setup advanced			
	pnp setup advanced f	orce		
Syntax Description	force	Executes a setup ope	eration of the Cisco Plug and Play Gateway forcefully.	
Command Modes	Privileged EXEC (#)			
Command History	Release		Modification	
	Cisco Prime Infrastruc	cture 2.0	This command was introduced.	
Usage Guidelines Examples		ailable in the <i>var/KickSta</i> ple output of the <b>pnp set</b>	art/install/ directory. <b>tup advanced</b> command:	
	<pre>pnp setup advanced ####################################</pre>	######################################	######################################	
	Enter the fully qua Enter Prime Infrast. Enter Prime Infrast. Enable self certifi	lified host name of F ructure IP Address:   ructure Event Port Pa cate for server bgl-c		8]
		ownload of SSL Certif structure Server is u	ficate is possible if up and running.	
	Enable secure HTTPS		for server 10.104.105.70 (y/n) [y] ecure Plug and Play Gateway Web GUI (y/n) [y] [443]	
		ear text operation g and Play Gateway ar	nd device(s) increases security risk.	
	Enter Tomcat intern	peration between devi al port number: [8009 wn port number: [8005		]

The maximum number of Event Gateways allowed is '10' for both plain text and ssl combined. The Event Gateway ports 11011 and 11012 are reserved for port automatic allocation. These ports are not counted while taking the maximum number of ports.

Each Event Gateway can serves up to a maximum of 1000 devices.

Enter number of Event Gateways that will be started with crypto operation: [5] Enter port number for http web access: [80]

The maximum number of plain text event gateways ports possible is 5.

Enter number of Event Gateways that will be started with plaintext operation: [5]

The CNS Event command configures how the managed devices should connect to this particular Plug and Play Gateway. The command entered in the following

line should match what's configured on the devices WITHOUT the port number and keyword 'encrypt' if cryptographic is enabled.

For example, if the following CLI is configured on devices "cns event bgl-dt-ncs-vm64-228 encrypt 11012 keepalive 120 2 reconnect 10", then `encrypt 11012` should be removed and the below line should be entered : "cns event bgl-dt-ncs-vm64-228 keepalive 120 2 reconnect 10"

Another example, if this is a backup Plug and Play Gateway and the following CLI

is

configured on devices
"cns event bgl-dt-ncs-vm64-228 11011 source Vlan1 backup", then `11011`
should be removed and the below line should be entered :
"cns event bgl-dt-ncs-vm64-228 source Vlan1 backup"

Unable to enter a correct CLI could cause the managed devices not be able to connect to this Plug and Play Gateway. For details, please refer to Installation and Configuration Guide.

Enter CNS Event command: [cns event bgl-dt-ncs-vm64-228 keepalive 120 2 reconnect 10]

Enter IP address for CNS Gateway to listen to. Enter 1 to have CNSGateway listens to all IP addresses. IP addresses:[1] Enter Plug and Play Gateway Event Port Parameter: [62616] Enter base directory for Plug and Play Gateway log : [/var/log]

Data directory contains Template and Image files

Enter data directory for Plug and Play Gateway : [/var/KickStart]

Commit changes (y/n): y Attempting to disable the local Plug and Play Gateway in Prime Infrastructure Machine 10.104.105.70 Enter the username to login to the Prime Infrastructure Machine: [admin] ayyanna Enter the password to login to the Prime Infrastructure Machine: Plug and Play Gateway is already disabled Setup is in progress..... Stop Plug and Play Gateway server Done. Plug and Play Gateway setup completed Start Plug and Play Gateway server.... Done. Plug and Play Gateway server started! admin#

pnp start		
	To start the Cisco Plug and Play Gateway and display the status m use the <b>pnp start</b> command in privileged EXEC mode.	essages in detail during the startup process,
	pnp start	
Command Modes	Privileged EXEC	
Command History	Release	Modification
	Cisco Prime Infrastructure 1.2	This command was introduced.
	Cisco Prime Infrastructure 2.0	This command was modified.
Usage Guidelines	Before you execute the <b>pnp start</b> command, stop the Cisco Plug on stopping the Cisco Plug and Play gateway, refer to the section	
Examples	The following is sample output from the <b>pnp start</b> command:	
	admin# <b>pnp start</b>	
	<pre>httpd is stopped Monitoring process started. Plug and Play Gateway start Started Event Manager process Starting tomcat Starting httpd: Starting httpd: Start of Plug and Play Gateway Completed!! admin#</pre>	[ OK ]

#### pnp status

To determine the status of the individual tasks and services that are currently running on the Cisco Plug and Play Gateway, use the **pnpstatus** command in privileged EXEC mode.

#### pnp status

### **Command Modes** Privileged EXEC

#### **Command History**

Release	Modification
Cisco Prime Infrastructure 1.2	This command was introduced.
Cisco Prime Infrastructure 2.0	This command was modified.

# **Usage Guidelines** This command can also be used to determine whether the tasks that are running on the Cisco Plug and Play Gateway are secure or nonsecure, and whether the services are up and running or down, along with their port and PID number, where applicable.

#### **Examples**

The following is sample output from the **pnp status** command:

admin# <b>pnp status</b> SERVICE	MODE	STATUS   ADDITIONAL INFO

pnp tech log			
	To create a system-monitoring log file for the Cisco Plug and Play Gateway, use the <b>pnp tech log</b> command in privileged EXEC mode.		
	pnp tech log		
Command Modes	Privileged EXEC		
<b>Command History</b>	Release	Modification	
	Cisco Prime Infrastructure 1.2	This command was introduced.	
	Cisco Prime Infrastructure 2.0	This command was modified.	
Usage Guidelines	The <b>pnp tech log</b> command creates a system-monitoring .pnp_systemmonitor.tar.gz.	g log file in a compressed tar format with the extension	
Examples	The following is sample output from the <b>pnp tech log</b>	command:	
	admin# <b>pnp tech log</b>		
	The System Status file created : /localdisk/20 admin#	121003032209.pnp_systemmonitor.tar.gz	
Note	For more information on how to copy files from the lo	cal disk, see copy, on page 51 command.	

# show Commands

This section lists Prime Infrastructure **show** commands. Each command includes a brief description of its use, any command defaults, command modes, usage guidelines, an example of the command syntax and any related commands.

# show application

To show application information of the installed application packages on the system, use the **show application** command in EXEC mode.

show application [status | version [app\_name]]

Syntax Description	status	Displays the status of the installed application.		
	version	Displays the application version for an installed application—the Prime Infrastructure.		
	app_name	Name of the installed application.		

#### Table 16: Output Modifier Variables for Count or Last

	Output modifier variables:		
	• begin—Matched pattern. Up to 80 alphanumeric characters.		
	• <i>count</i> —Counts the number of lines in the output. Add number after the word <i>count</i> .		
	—Output modifier variables.		
	• end—Ends with line that matches. Up to 80 alphanumeric characters.		
	• <i>exclude</i> —Excludes lines that match. Up to 80 alphanumeric characters.		
	• <i>include</i> —Includes lines that match. Up to 80 alphanumeric characters.		
	• <i>last</i> —Displays last few lines of output. Add number after the word <i>last</i> . Up to 80 lines to display. Default 10.		
	—Output modifier variables (see Table A-8).		

**Command Default** No default behavior or values.

**Command Modes** EXEC

**Examples** Example 1

ncs/admin# show application <name> <Description> ncs Cisco Network Control System ncs/admin#

#### Example 2

ncs/admin# show application version NCS

```
Cisco Network Control System
                                                                  _____
Version : 1.0.2.051
Build Date : Mon Aug 2 00:34:25 2010
Install Date : Thu Aug 5 17:48:49 2010
```

ncs/admin# Example 3

ncs/admin# show application status NCS

```
NCS Database listener is running, PID: 21096
NCS Database is running, number of processes: 27
NCS Application Server is running, PID: 21432
NCS M&T Session Database is running, PID: 21365
NCS M&T Log Collector is running, PID: 21468
NCS M&T Log Processor is running, PID: 21494
NCS M&T Alert Process is running, PID: 21524
```

ncs/admin#

Description		
application install	Installs an application bundle.	
application remove	Removes or uninstalls an application.	
application start	Starts or enables an application.	
application stop	Stops or disables an application.	
application upgrade	Upgrades an application bundle.	

### show backup history

To display the backup history of the system, use the **show backup history** command in EXEC mode.

show backup history

- **Syntax Description** This command has no arguments or keywords.
- **Command Default** No default behavior or values.

Command Modes EXEC

**Examples** Example 1

ncs/admin# show backup history
Wed Aug 18 12:55:21 UTC 2010: backup logs logs-0718.tar.gz to repository fileserver007:
success
Wed Aug 18 12:55:53 UTC 2010: backup full-0718.tar.gpg to repository fileserver007: success
ncs/admin#
Example 2

ncs/admin# show backup history
backup history is empty
ncs/admin#

Command	Description
backup	Performs a backup ( Prime Infrastructure and Cisco ADE OS) and places the backup in a repository.
restore	Restores from backup the file contents of a specific repository.
repository	Enters the repository submode for configuration of backups.
show repository	Displays the available backup files located on a specific repository.

### show cdp

To display information about the enabled Cisco Discovery Protocol interfaces, use the **show cdp** command in EXEC mode.

show cdp {all | neighbors}

Syntax Description	all	Shows all of the enabled Cisco Discovery Protocol interfaces.
	neighbors	Shows the Cisco Discovery Protocol neighbors.

**Command Default** No default behavior or values.

**Command Modes** EXEC

#### **Examples** Example 1

```
ncs/admin# show cdp all
CDP protocol is enabled ...
broadcasting interval is every 60 seconds.
time-to-live of cdp packets is 180 seconds.
CDP is enabled on port GigabitEthernet0.
ncs/admin#
```

#### Example 2

	<pre>/admin# show cdp neighbo Neighbor : 000c297840e5 Local Interface Device Type Port Address</pre>	::	GigabitEthernet0
CDP	Neighbor : isexp-esw5 Local Interface Device Type Port Address	: :	GigabitEthernet0 cisco WS-C3560E-24TD GigabitEthernet0/5 172.23.90.45
CDP	Neighbor : 000c29e29926 Local Interface Device Type Port Address	: : :	
CDP	Neighbor : 000c290fba98 Local Interface Device Type Port Address	: : :	GigabitEthernet0 L-NCS-1.0-50 eth0 172.23.90.111

ncs/admin#

Command	Description
cdp holdtime	Specifies the length of time that the receiving device should hold a Cisco Discovery Protocol packet from your router before discarding it.
cdp run	Enables the Cisco Discovery Protocol.
cdp timer	Specifies how often the Prime Infrastructure server sends Cisco Discovery Protocol updates.

### show clock

To display the day, month, date, time, time zone, and year of the system software clock, use the **show clock** command in EXEC mode.

show clock

**Syntax Description** This command has no arguments or keywords.

ncs/admin# show clock Fri Aug 6 10:46:39 UTC 2010

**Command Default** No default behavior or values.

ncs/admin#

Command Modes EXEC

#### **Examples**

**Note** The **show clock** output in the previous example includes Coordinated Universal Time (UTC) or Greenwich Mean Time (GMT), Great Britain, or Zulu time (see Tables Table 19: Common Time Zones, Table 20: Australia Time Zones, and Table 21: Asia Time Zones on pages A-84 and A-85 for sample time zones).

<b>Related Commands</b>	Command	Description
	clock	Sets the system clock for display purposes.

# show cpu

To display CPU information, use the **show cpu** command in EXEC mode. **show cpu** [statistics] [|] [|]

Syntax Description	statistics	Displays CPU statistics.
		Output modifier variables:
		• begin—Matched pattern. Up to 80 alphanumeric characters.
		• <i>count</i> —Counts the number of lines in the output. Add number after the word <i>count</i> .
		—Output modifier variables (see Table A-9).
		• end—Ends with line that matches. Up to 80 alphanumeric characters.
		• exclude—Excludes lines that match. Up to 80 alphanumeric characters.
		• <i>include</i> —Includes lines that match. Up to 80 alphanumeric characters.
		• <i>last</i> —Displays last few lines of output. Add number after the word <i>last</i> . Up to 80 lines to display. Default 10.
		—Output modifier variables (see Table A-9).

Command Default	No default behavior or values.
Command Modes	EXEC
Examples	Example 1
	ncs/admin# <b>show cpu</b>
	processor : 0 model : Intel(R) Xeon(R) CPU E5320 @ 1.86GHz speed(MHz): 1861.914 cache size: 4096 KB
	ncs/admin# Example 2
	<pre>ncs/admin# show cpu statistics user time: 265175 kernel time: 166835 idle time: 5356204 i/o wait time: 162676 irq time: 4055 ncs/admin#</pre>

Command	Description
show disks	Displays the system information of all disks.
show memory	Displays the amount of system memory that each system process uses.

# show disks

To display the disks file-system information, use the **show disks** command in EXEC mode. show disks [|] [|]

Syntax Description	Output modifier variables:		
	• begin—Matched pattern. Up to 80 alphanumeric characters.		
	• <i>count</i> —Counts the number of lines in the output. Add number after the word <i>count</i> .		
	—Output modifier variables (see Table A-10).		
	• end—Ends with line that matches. Up to 80 alphanumeric characters.		
	• exclude—Excludes lines that match. Up to 80 alphanumeric characters.		
	• <i>include</i> —Includes lines that match. Up to 80 alphanumeric characters.		
	<ul> <li><i>last</i>—Displays last few lines of output. Add number after the word <i>last</i>. Up to 80 lines to display. Default 10.</li> </ul>		
	—Output modifier variables (see Table A-10).		
Command Default	No default behavior or values.		
Command Modes	EXEC		
Usage Guidelines	Only platforms that have a disk file system support the <b>show disks</b> command.		
Examples	ncs/admin# <b>show disks</b>		
	temp. space 2% used (17828 of 988116) disk: 3% used (143280 of 5944440)		
	Internal filesystems: all internal filesystems have sufficient free space		
	ncs/admin#		
Related Commands	Command Description		

### F

Command	Description
show cpu	Displays CPU information.
show memory	Displays the amount of system memory that each system process uses.

1

# show icmp-status

To display the Internet Control Message Protocol echo response configuration information, use the **show icmp\_status** command in EXEC mode.

show icmp\_status {> file | |}

Syntax Description	>	Output direction.
	file	Name of file to redirect standard output (stdout).
		Output modifier commands:
		• begin—Matched pattern. Up to 80 alphanumeric characters.
		• <i>count</i> —Counts the number of lines in the output. Add number after the word count.
		°  —Output modifier commands (see Table A-11 ).
		• end—Ends with line that matches. Up to 80 alphanumeric characters.
		• exclude—Excludes lines that match. Up to 80 alphanumeric characters.
		• <i>include</i> —Includes lines that match. Up to 80 alphanumeric characters.
		• last—Displays last few lines of output. Add number after the word last. Up to 80 lines to display. Default 10.
		°  —Output modifier commands (see Table A-11).
Command Default	No default behavior or v	values.
Command Modes	EXEC	
Examples	Example 1	
	ncs/admin# <b>show icmp</b> icmp echo response i ncs/admin# <b>Example 2</b>	
	ncs/admin# <b>show icmp</b> icmp echo response i ncs/admin#	

Command	Description
icmp echo	Configures the Internet Control Message Protocol (ICMP) echo requests.

# show interface

To display the usability status of interfaces configured for IP, use the **show interface** command in EXEC mode.

show interface [GigabitEthernet] |

Syntax Description	GigabitEthernet	Shows the Gigabit Ethernet interface. Either 0 or 1.
		Output modifier variables:
		• begin—Matched pattern. Up to 80 alphanumeric characters.
		• <i>count</i> —Counts the number of lines in the interface. Add number after the word <i>count</i> .
		• end—Ends with line that matches. Up to 80 alphanumeric characters.
		• <i>exclude</i> —Excludse lines that match. Up to 80 alphanumeric characters.
		• <i>include</i> —Includes lines that match. Up to 80 alphanumeric characters.
		• <i>last</i> —Displays last few lines of output. Add number after the word <i>last</i> . Up to 80 lines to display. Default 10.
Command Default	No default behavior or v	ralues.
Command Modes	EXEC	
Usage Guidelines	The first internet address you need to have IPv6 re link local address that do	<b>igabitEthernet 0</b> output, you can find that the interface has three IPv6 addresses. (starting with 3ffe) is the result of using stateless autoconfiguration. For this to work, but advertisement enabled on that subnet. The next address (starting with fe80) is a less not have any scope outside the host. You always see a link local address regardless ration or DHCPv6 configuration. The last address (starting with 2001) is the result DHCP server.
Examples	Example 1	
	inet addr: inet6 addr UP BROADCA RX packets TX packets collisions RX bytes:6	rface :Ethernet HWaddr 00:0C:29:6A:88:C4 172.23.90.113 Bcast:172.23.90.255 Mask:255.255.255.0 : fe80::20c:29ff:fe6a:88c4/64 Scope:Link ST RUNNING MULTICAST MTU:1500 Metric:1 :48536 errors:0 dropped:0 overruns:0 frame:0 :14152 errors:0 dropped:0 overruns:0 carrier:0 :0 txqueuelen:1000 507290 (6.2 MiB) TX bytes:12443568 (11.8 MiB) 59 Base address:0x2000

10 Link encap:Local Loopback inet addr:127.0.0.1 Mask:255.0.0.0 inet6 addr: ::1/128 Scope:Host UP LOOPBACK RUNNING MTU:16436 Metric:1 RX packets:1195025 errors:0 dropped:0 overruns:0 frame:0 TX packets:1195025 errors:0 dropped:0 overruns:0 carrier:0 collisions:0 txqueuelen:0 RX bytes:649425800 (619.3 MiB) TX bytes:649425800 (619.3 MiB) sit0 Link encap:IPv6-in-IPv4 NOARP MTU:1480 Metric:1 RX packets:0 errors:0 dropped:0 overruns:0 frame:0 TX packets:0 errors:0 dropped:0 overruns:0 carrier:0 collisions:0 txqueuelen:0 RX bytes:0 (0.0 b) TX bytes:0 (0.0 b) ncs/admin#

```
Example 2
```

```
ncs/admin# show interface GigabitEthernet 0
eth0 Link encap:Ethernet HWaddr 00:0C:29:AF:DA:05
inet addr:172.23.90.116 Bcast:172.23.90.255 Mask:255.255.00
inet6 addr: 3ffe:302:11:2:20c:29ff:feaf:da05/64 Scope:Global
inet6 addr: fe80::20c:29ff:feaf:da05/64 Scope:Link
inet6 addr: 2001:558:ff10:870:8000:29ff:fe36:200/64 Scope:Global
UP BROADCAST RUNNING MULTICAST MTU:1500 Metric:1
RX packets:77848 errors:0 dropped:0 overruns:0 frame:0
TX packets:23131 errors:0 dropped:0 overruns:0 carrier:0
collisions:0 txqueulen:1000
RX bytes:10699801 (10.2 MiB) TX bytes:3448374 (3.2 MiB)
Interrupt:59 Base address:0x2000
```

Command	Description
interface	Configures an interface type and enters the interface configuration submode.
ipv6 address autoconfig	Enables IPv6 stateless autoconfiguration on an interface.
ipv6 address dhcp	Enables IPv6 address DHCP on an interface.

# show inventory

To display information about the hardware inventory, including the Prime Infrastructure appliance model and serial number, use the **show inventory** command in EXEC mode.

show inventory |

Syntax Description	Output modifier variables:
	• begin—Matched pattern. Up to 80 alphanumeric characters.
	• <i>count</i> —Counts the number of lines in the interface. Add number after the word <i>count</i> .
	• end—Ends with line that matches. Up to 80 alphanumeric characters.
	• exclude—Excludse lines that match. Up to 80 alphanumeric characters.
	• <i>include</i> —Includes lines that match. Up to 80 alphanumeric characters.
	• <i>last</i> —Displays last few lines of output. Add number after the word <i>last</i> . Up to 80 lines to display. Default 10.
Command Default	No default behavior or values.
Command Modes	EXEC
Examples	<pre>ncs/admin# show inventory NAME: "L-NCS-1.0-50 chassis", DESCR: "L-NCS-1.0-50 chassis" PID: L-NCS-1.0-50 , VID: V01 , SN: H8JESGOFHGG Total RAM Memory: 1035164 kB CPU Core Count: 1 CPU 0: Model Infc: Intel(R) Xeon(R) CPU E5320 @ 1.86GHz Hard Disk Count(*): 1 Disk 0: Device Name: /dev/sda Disk 0: Capacity: 64.40 GB Disk 0: Geometry: 255 heads 63 sectors/track 7832 cylinders NIC Count: 1 NIC 0: Device Name: eth0 NIC 0: HW Address: 00:0C:29:6A:88:C4 NIC 0: Driver Descr: eth0: registered as PCnet/PCI II 79C970A (*) Hard Disk Count may be Logical. ncs/admin#</pre>

# show logging

To display the state of system logging (syslog) and the contents of the standard system logging buffer, use the **show logging** command in EXEC mode.

show logging {application [application-name]} {internal} {system} |

iption application	Displays application logs.
application-name	Application name. Up to 255 alphanumeric characters.
	• <i>tail</i> —Tail system syslog messages.
	• count—Tail last count messages. From 0 to 4,294,967,295.
	-Output modifier variables (see below).
internal	Displays the syslogs configuration.
system	Displays the system syslogs.
	Output modifier variables:
	• begin—Matched pattern. Up to 80 alphanumeric characters.
	• <i>count</i> —Counts the number of lines in the interface. Add number after the word <i>count</i> .
	• end—Ends with line that matches. Up to 80 alphanumeric characters.
	• exclude—Excludes lines that match. Up to 80 alphanumeric characters.
	• include—Includes lines that match. Up to 80 alphanumeric characters.
	• <i>last</i> —Displays last few lines of output. Add number after the word <i>last</i> . Up to 80 lines to display. Default 10.

Command Default	No default behavior or values.
Command Modes	EXEC
Usage Guidelines	This command displays the state of syslog error and event logging, including host addresses, and for which, logging destinations (console, monitor, buffer, or host) logging is enabled.
Examples	Example 1
	ncs/admin# show logging system

ADEOS Platform log: \_\_\_\_\_ Aug 5 10:44:32 localhost debugd[1943]: [16618]: config:network: main.c[252] [setup]: Setup is complete Aug 5 10:45:02 localhost debugd[1943]: [17291]: application:install cars install.c[242] [setup]: Install initiated with bundle - ncs.tar.gz, - SystemDefaultPkgRepos repo · Aug 5 10:45:02 localhost debugd[1943]: [17291]: application:install cars\_install.c[256] [setup]: Stage area - /storeddata/Installing/.1281030 302 5 10:45:02 localhost debugd[1943]: [17291]: application:install cars install.c[260] Auq [setup]: Getting bundle to local machine Aug 5 10:45:03 localhost debugd[1943]: [17291]: transfer: cars xfer.c[58] [setup]: local copy in of ncs.tar.gz requested Aug 5 10:45:46 localhost debugd[1943]: [17291]: application:install cars install.c[269] [setup]: Got bundle at - /storeddata/Installing/.1281 030302/ncs.tar.gz Aug 5 10:45:46 localhost debugd[1943]: [17291]: application:install cars install.c[279] [setup]: Unbundling package ncs.tar.gz Aug 5 10:47:06 localhost debugd[1943]: [17291]: application:install cars install.c[291] [setup]: Unbundling done. ncs/admin# show logging internal

log server:	localhost
Global loglevel:	6
Status:	Enabled
ncs/admin#	

#### Example 3

ncs/admin# show logging internal

log server: localhost Global loglevel: 6 Status: Disabled ncs/admin#

### show logins

To display the state of system logins, use the show logins command in EXEC mode. show logins cli **Syntax Description** Lists the cli login history. cli **Command Default** No default behavior or values. **Command Modes** EXEC **Usage Guidelines** Requires the cli keyword; otherwise, an error occurs. Examples ncs/admin# show logins cli pts/0 6 09:45 10.77.137.60 Fri Aug admin still logged in pts/0 . Fri Aug 10.77.137.60 6 08:56 - 09:30 (00:33) admin pts/0 10.77.137.60 6 07:17 - 08:43 (01:26) admin Fri Aug system boot 2.6.18-164.el5PA Thu Aug reboot 5 18:17 (17:49) admin tty1 Thu Aug 5 18:15 - down (00:00)system boot 2.6.18-164.el5PA Thu Aug reboot 5 18:09 (00:06)5 17:43 - 18:07 setup Thu Aug (00:24)tty1 system boot 2.6.18-164.el5PA Thu Aug 5 16:05 reboot (02:02) wtmp begins Thu Aug 5 16:05:36 2010 ncs/admin#

### show memory

To display the memory usage of all of the running processes, use the **show memory** command in EXEC mode.

show memory

- **Syntax Description** This command has no arguments or keywords.
- **Command Default** No default behavior or values.

**Command Modes** EXEC

### Examples

5			
	ncs/admin# <b>show</b>	memory	
	total memory:	1035164	kВ
	free memory:	27128	kВ
	cached:	358888	kВ
	swap-cached:	142164	kВ

ncs/admin#

### show ntp

To show the status of the NTP associations, use the show ntp command in EXEC mode.

show ntp

- **Syntax Description** This command has no arguments or keywords.
- **Command Default** No default behavior or values.

Command Modes EXEC

#### **Examples**

ncs/admin# show ntp
Primary NTP : cd-ncs-ntp.cisco.com

synchronised to NTP server (10.56.60.29) at stratum 3 time correct to within 99 ms polling server every 1024 s

remote	refid	st	t	when	poll	reach	delay	offset	jitter
127.127.1.0 *10.56.60.29	.LOCL. 64.103.34.15		-			- · ·	0.000 270.657	0.000	0.001

Warning: Output results may conflict during periods of changing synchronization. ncs/admin# ncs/admin# show ntp % no NTP servers configured ncs/admin#

Command	Description	
ntp server	Allows synchronization of the software clock by the NTP server for the system.	

# show ports

To display information about all of the processes listening on active ports, use the **show ports** command in EXEC mode.

show ports [|] [|]

• <i>begin</i> —Matched pattern. Up to 80 alphanumeric characters.
begin—Matched pattern. Of to so alphanumene characters.
• <i>count</i> —Counts the number of lines in the interface. Add number after the word <i>count</i> .
—Output modifier variables (see Table A-12).
• end—Ends with line that matches. Up to 80 alphanumeric characters.
• exclude—Excludes lines that match. Up to 80 alphanumeric characters.
• <i>include</i> —Includes lines that match. Up to 80 alphanumeric characters.
• <i>last</i> —Displays last few lines of output. Add number after the word <i>last</i> . Up to 80 lines to display. Default 10.
—Output modifier variables (see Table A-12).

Command Default	No default behavior or values.
Command Modes	EXEC
Usage Guidelines	When you run the <b>show ports</b> command, the port must have an associated active session.
Examples	<pre>ncs/admin# show ports Process : timestensubd (21372)     tcp: 127.0.0.1:11298 Process : timestenorad (21609)     tcp: 127.0.0.1:51715     udp: ::1:28314, ::1:59055, ::1:45113, ::1:49082, ::1:64737, ::1:62570, ::1:19577, ::1:29821 Process : ttcserver (21382)     tcp: 127.0.0.1:16612, 0.0.0.0:53385 Process : timestenrepd (21579)     tcp: 127.0.0.1:62504, 0.0.0.0:18047     udp: ::1:51436 Process : timestend (21365)     tcp: 0.0.0.0:53384 Process : rpc.statd (2387)     tcp: 0.0.0.0:873     udp: 0.0.0.0:873     udp: 0.0.0.0:877</pre>

### show process

To display information about active processes, use the **show process** command in the EXEC mode. **show process** 

Syntax Description	(Optional) Output modifier variables:
	• <i>begin</i> —Matched pattern. Up to 80 alphanumeric characters.
	• <i>count</i> —Counst the number of lines in the interface. Add number after the word <i>count</i> .
	• end—Ends with line that matches. Up to 80 alphanumeric characters.
	• exclude—Excludes lines that match. Up to 80 alphanumeric characters.
	• <i>include</i> —Includes lines that match. Up to 80 alphanumeric characters.
	• <i>last</i> —Displays last few lines of output. Add number after the word <i>last</i> . Up to 80 lines to display. Default 10.
Command Default	No default behavior or values.
<b>Command Modes</b>	EXEC

**Examples** ncs/admin# show process USER PID TIME TT COMMAND root 1 00:00:02 ? init root 2 00:00:00 ? migration/0 root 3 00:00:00 ? ksoftirqd/0 root 4 00:00:00 ? watchdog/0 root 5 00:00:00 ? events/0 root 6 00:00:00 ? khelper root 7 00:00:00 ? kthread root 10 00:00:01 ? kblockd/0 root 11 00:00:00 ? kacpid root 170 00:00:00 ? cqueue/0 root 173 00:00:00 ? khubd root 175 00:00:00 ? kseriod root 239 00:00:32 ? kswapd0

**Table 17: Show Process Field Descriptions** 

Field	Description
USER	Logged-in user.
PID	Process ID.
TIME	The time that the command was last used.
TT	Terminal that controls the process.
COMMAND	Type of process or command used.

### show repository

To display the file contents of the repository, use the **show repository** command in EXEC mode. **show repository** repository-name

 Syntax Description
 repository-name
 Name of the repository whose contents you want to view. Up to 30 alphanumeric characters.

**Command Default** No default behavior or values.

Command Modes EXEC

#### **Examples**

ncs/admin# **show repository myrepository** back1.tar.gpg back2.tar.gpg ncs/admin#

Command	Description
backup	Performs a backup ( Prime Infrastructure and Cisco ADE OS) and places the backup in a repository.
restore	Restores from backup the file contents of a specific repository.
repository	Enters the repository submode for configuration of backups.
show backup history	Displays the backup history of the system.

## show restore

To display the restore history, use the **show restore** command in EXEC mode. **show restore** {**history**}

Syntax Description	history Displays the restore history.
Command Default	No default behavior or values.
Command Modes	EXEC
Examples	Example 1 ncs/admin# show restore history ncs/admin# Example 2
	ncs/admin# <b>show restore history</b> restore history is empty ncs/admin#

Command	Description		
backup	Performs a backup ( Prime Infrastructure and Cisco ADE OS) and place the backup in a repository.		
restore	Restores from backup the file contents of a specific repository.		
repository	Enters the repository submode for configuration of backups.		
show backup history	Displays the backup history of the system.		

# show running-config

To display the contents of the currently running configuration file or the configuration, use the **show running-config** command in EXEC mode.

#### showrunning-config

- **Syntax Description** This command has no arguments or keywords.
- **Command Default** The show running-config command displays all of the configuration information.

```
Command Modes EXEC
```

#### **Examples**

```
ncs/admin# show running-config
Generating configuration...
hostname ncs
ip domain-name cisco.com
interface GigabitEthernet 0
  ip address 172.23.90.113 255.255.255.0
  ipv6 address autoconfig
ip name-server 172.16.168.183
ip default-gateway 172.23.90.1
clock timezone UTC
ntp server time.nist.gov
username admin password hash $1$JbbHvKVG$xMZ/XL4tH15Knf.FfcZZr. role admin
service sshd
password-policy
 lower-case-required
  upper-case-required
  digit-required
  no-username
  disable-cisco-passwords

logging localhost
logging loglevel 6
cdp timer 60
cdp holdtime 180
cdp run GigabitEthernet 0
icmp echo on
1
ncs/admin#
```

Command	Description		
configure	Enters configuration mode.		
show startup-config	Displays the contents of the startup configuration file or the configuration.		

# show startup-config

To display the contents of the startup configuration file or the configuration, use the **show startup-config** command in EXEC mode.

#### showstartup-config

- **Syntax Description** This command has no arguments or keywords.
- **Command Default** The show startup-config command displays all of the startup configuration information.

```
Command Modes EXEC
```

#### Examples

```
ncs/admin# show startup-config
hostname ncs
ip domain-name cisco.com
interface GigabitEthernet 0
  ip address 172.23.90.113 255.255.255.0
  ipv6 address autoconfig
ip name-server 172.16.168.183
ip default-gateway 172.23.90.1
clock timezone UTC
ntp server time.nist.gov
username admin password hash $1$JbbHvKVG$xMZ/XL4tH15Knf.FfcZZr. role admin
service sshd
password-policy
 lower-case-required
  upper-case-required
 digit-required
 no-username
  disable-cisco-passwords
 min-password-length 6
logging localhost
logging loglevel 6
cdp timer 60
cdp holdtime 180
cdp run GigabitEthernet 0
icmp echo on
ncs/admin#
```

Command	Description	
configure	Enters configuration mode.	
show running-config	Displays the contents of the currently running configuration file or the configuration.	

# show tech-support

To display technical support information, including email, use the **show tech-support** command in EXEC mode.

show tech-support file [word]

Syntax Description	file Saves any technical support data as a file in the local disk.					
	word Filename to save. Up to 80 alphanumeric characters.					
Command Default	Passwords and other security information do not appear in the output.					
Command Modes	EXEC					
Usage Guidelines	The <b>show tech-support</b> command is useful for collecting a large amount of information about your Prime Infrastructure server for troubleshooting purposes. You can then provide output to technical support representatives when reporting a problem.					
Examples	ncs/admin# show <b>tech-support</b> ####################################					
	*****					
	Checking dmidecode Serial Number(s)					
	None VMware-56 4d 14 cb 54 3d 44 5d-49 ee c4 ad a5 6a 88 c4

ncs/admin#

Command	Description		
show interface	Displays the usability status of the interfaces.		
show process	Displays information about active processes.		
show running-config	Displays the contents of the current running configuration.		

## show terminal

To obtain information about the terminal configuration parameter settings, use the **show terminal** command in EXEC mode.

show terminal

- **Syntax Description** This command has no arguments or keywords.
- **Command Default** No default behavior or values.

**Command Modes** EXEC

#### **Examples**

ncs/admin# show terminal TTY: /dev/pts/0 Type: "vt100" Length: 27 lines, Width: 80 columns Session Timeout: 30 minutes ncs/admin# show terminal, on page 176 describes the fields of the show terminal output.

**Table 18: Show Terminal Field Descriptions** 

Field	Description			
TTY: /dev/pts/0	Displays standard output to type of terminal.			
Type: "vt100"	Type of current terminal used.			
Length: 24 lines	Length of the terminal display.			
Width: 80 columns	Width of the terminal display, in character columns.			
Session Timeout: 30 minutes	Length of time, in minutes, for a session, after which the connection closes.			

# show timezone

To display the time zone set on the system, use the **show timezone** command in EXEC mode.

show timezone

- **Syntax Description** This command has no arguments or keywords.
- **Command Default** No default behavior or values.

**Command Modes** EXEC

### Examples

ncs/admin# show timezone
UTC
ncs/admin#

Command	Description
clock timezone	Sets the time zone on the system.
show timezones	Displays the time zones available on the system.

show timezo	ones
	To obtain a list of time zones from which you can select, use the <b>show timezones</b> command in EXEC mode.
	show timezones
Syntax Description	This command has no arguments or keywords.
Command Default	No default behavior or values.
Command Modes	EXEC
Usage Guidelines	See the clock timezone command, for examples of the time zones available for the Prime Infrastructure server.
Examples	<pre>ncs/admin# show timezones Africa/Blantyre Africa/Dar_es_Salaam Africa/Dakar Africa/Asmara Africa/Asmara Africa/Asmara Africa/Maputo Africa/Maputo Africa/Accra Africa/Kigali Africa/Cunis Africa/Tunis Africa/Nouakchott Africa/Ouagadougou Africa/Ouagadougou Africa/Ouagadougou Africa/Duala Africa/Johannesburg Africa/Johannesburg Africa/Lagos Africa/Ligos Africa/Djibouti Africa/Mintoum Africa/Monrovia Africa/Monrovia Africa/Bujumbura</pre>

Command Reference Guide for Cisco Prime Infrastructure 2.0

(press Spacebar to continue)

Africa/Malabo Africa/Ceuta Africa/Cairo Africa/Cairo Africa/Mogadishu Africa/Brazzaville Africa/Kampala Africa/Sao\_Tome Africa/Algiers Africa/Addis\_Ababa Africa/Addis\_Ababa Africa/Gaborone Africa/Bamako Africa/Freetown --More--

ncs/admin#

Command Description	
show timezone	Displays the time zone set on the system.
clock timezone	Sets the time zone on the system.

# show udi

To display information about the UDI of the Cisco ISE 3315 appliance, use the **show udi** command in EXEC mode.

show udi

- **Syntax Description** This command has no arguments or keywords.
- **Command Default** No default behavior or values.

Command Modes EXEC

### **Examples** Example 1

ncs/admin# **show udi** SPID: L-NCS-1.0-50 VPID: V01 Serial: LAB12345678

ncs/admin#

The following output appears when you run the show udi command on VM ware servers.

#### Example 2

ncs/admin# **show udi** SPID: L-NCS-1.0-50 VPID: V01 Serial: 5C79C84ML9H

ncs/admin#

# show uptime

To display the length of time that you have been logged in to the Prime Infrastructure server, use the **show uptime** command in EXEC mode.

show uptime |

Syntax Description	(Optional) Output modifier variables:	
	• begin—Matched pattern. Up to 80 alphanumeric characters.	
	• <i>count</i> —Counts the number of lines in the output. Add number after the <i>count</i> .	word
	• end—Ends with line that matches. Up to 80 alphanumeric characters	•
	• exclude—Excludes lines that match. Up to 80 alphanumeric characte	rs.
	• include—Includse lines that match. Up to 80 alphanumeric character	S.
	<ul> <li><i>last</i>—Displays last few lines of output. Add number after the word <i>la</i>. to 80 lines to display. Default 10.</li> </ul>	st. Up

**Command Default** No default behavior or values.

Command Modes EXEC

**Examples** 

ncs/admin# **show uptime** 3 day(s), 18:55:02 ncs/admin#

## show users

To display the list of users logged in to the Prime Infrastructure server, use the **show users** command in EXEC mode.

show users

- **Syntax Description** This command has no arguments or keywords.
- **Command Default** No default behavior or values.

**Command Modes** EXEC

## Examples

ncs/admin# <b>show</b> USERNAME	users ROLE	HOST	TTY	LOGIN DATETIME
admin	Admin	10.77.137.60	pts/0	Fri Aug 6 09:45:47 2010
ncs/admin#				

## show version

To display information about the software version of the system, use the **show version** command in EXEC mode.

show version

- **Syntax Description** This command has no arguments or keywords.
- **Command Default** No default behavior or values.

Command Modes EXEC

**Usage Guidelines** This command displays version information about the Cisco ADE-OS software running on the Prime Infrastructure server, and displays the Prime Infrastructure version.

#### **Examples**

ncs/admin# show version Cisco Application Deployment Engine OS Release: 2.0 ADE-OS Build Version: 2.0.0.568 ADE-OS System Architecture: i386 Copyright (c) 2005-2010 by Cisco Systems, Inc. All rights reserved. Hostname: pmbudev-vm3 Version information of installed applications Cisco Prime Network Control System \_\_\_\_\_ Version : 1.0.2.051 Vendor : Wireless Networking Business Unit ncs/admin#

# **Configuration Commands**

This section lists the **configuration commands** along with a brief description of their use, command defaults, command syntax, command modes, usage guidelines, command examples, and related commands, where applicable.

Configuration commands include interface and repository.

**Note** Some of the configuration commands require you to enter the configuration submode to complete the command configuration.

To access configuration mode, you must use the configure command in EXEC mode.

# backup-staging-url

To allow you to configure a Network File System (NFS) location that the backup and restore operations will use as a staging area to package and unpackage backup files, use the **backup-staging-url** command in configuration mode.

backup-staging-url word

Syntax Description	word	NFS URL for staging area. Up to 2048 alphanumeric characters. Use <b>nfs:</b> // <i>server:path</i> (1).
Command Default	No default behavior or va	alues.
Command Modes	Configuration	
Usage Guidelines	The URL is NFS only. T	he format of the command is <b>backup-staging-url nfs:</b> //server:path.
Caution	Ensure that you secure yo address of the Prime Infra	our NFS server in such a way that the directory can be accessed only by the IP astructure server.
Examples	ncs/admin(config)# <b>ba</b> ncs/admin(config)#	ckup-staging-url nfs://loc-filer02a:/vol/local1/private1/jdoe

# cdp holdtime

To specify the amount of time for which the receiving device should hold a Cisco Discovery Protocol packet from the Prime Infrastructure server before discarding it, use the **cdp holdtime** command in configuration mode. To revert to the default setting, use the **no** form of this command.

[no] cdp holdtime seconds

Syntax Description	seconds Specifies the hold time, in sec	conds. Value from 10 to 255 seconds.
Command Default	180 seconds	
Command Modes	Configuration	
Usage Guidelines	Cisco Discovery Protocol packets transmit with a time to discard the Cisco Discovery Protocol information in the C has elapsed.	· · · · · · · · · · · · · · · · · · ·
	The <b>cdp holdtime</b> command takes only one argument; ot	therwise, an error occurs.
Examples	ncs/admin(config)# <b>cdp holdtime 60</b> ncs/admin(config)#	
<b>Related Commands</b>	Description	

	Description
cdp timer	Specifies how often the Prime Infrastructure server sends Cisco Discovery Protocol updates.
cdp run	Enables the Cisco Discovery Protocol.

# cdp run

		overy Protocol, use the <b>cdp run</b> command in configuration mode. To disable the l, use the <b>no</b> form of this command.
	[no] cdp run [GigabitEt.	hernet]
Syntax Description	GigabitEthernet	Specifies the Gigabit Ethernet interface on which to enable the Cisco Discovery Protocol.
Command Default	No default behavior or va	alues.
Command Modes	Configuration	
Usage Guidelines		ptional argument, which is an interface name. Without an optional interface name, e Cisco Discovery Protocol on all interfaces.
Note		nand is on interfaces that are already up and running. When you are bringing up co Discovery Protocol first; then, start the Cisco Discovery Protocol again.
Examples	ncs/admin(config)# <b>cd</b> ncs/admin(config)#	lp run GigabitEthernet O
<b>Related Commands</b>		Description
	cdp holdtime	Specifies the length of time that the receiving device should hold a Cisco Discovery Protocol packet from the Prime Infrastructure server before discarding it.
	cdp timer	Specifies how often the Prime Infrastructure server sends Cisco Discovery Protocol updates.

# cdp timer

To specify how often the Prime Infrastructure server sends Cisco Discovery Protocol updates, use the **cdp timer** command in configuration mode. To revert to the default setting, use the **no** form of this command.

[no] cdp timer seconds

Syntax Description	seconds         Specifies how often, in seconds, the Prime Infrastructure server sends Cisco           Discovery Protocol updates. Value from 5 to 254 seconds.
Command Default	60 seconds
Command Modes	Configuration
Usage Guidelines	Cisco Discovery Protocol packets transmit with a time to live, or hold time, value. The receiving device will discard the Cisco Discovery Protocol information in the Cisco Discovery Protocol packet after the hold time has elapsed.
	The cdp timer command takes only one argument; otherwise, an error occurs.
Examples	ncs/admin(config)# <b>cdp timer 60</b> ncs/admin(config)#

	Description
cdp holdtime	Specifies the amount of time that the receiving device should hold a Cisco Discovery Protocol packet from the Prime Infrastructure server before discarding it.
cdp run	Enables the Cisco Discovery Protocol.

## clock timezone

To set the time zone, use the **clock timezone** command in configuration mode. To disable this function, use the **no** form of this command.

clock timezone timezone

Syntax Description	timezone	Name of the time zone visible when in standard time. Up to 64 alphanumeric characters.
Command Default	UTC	
Command Modes	Configuration	
Usage Guidelines	5	ps time in Coordinated Universal Time (UTC). If you do not know your specific the region, country, and city (see Tables clock timezone, Table 20: Australia Time

Zones, and Table 21: Asia Time Zones for sample time zones to enter on your system).

#### Table 19: Common Time Zones

Acronym or name	Time Zone Name		
Europe	Europe		
GMT, GMT0, GMT-0, GMT+0, UTC, Greenwich, Universal, Zulu	Greenwich Mean Time, as UTC		
GB	British		
GB-Eire, Eire	Irish		
WET	Western Europe Time, as UTC		
CET	Central Europe Time, as UTC + 1 hour		
EET	Eastern Europe Time, as UTC + 2 hours		
United States and Canad	la		
EST, EST5EDT	Eastern Standard Time, as UTC -5 hours		
CST, CST6CDT	Central Standard Time, as UTC -6 hours		

Acronym or name	Time Zone Name
MST, MST7MDT	Mountain Standard Time, as UTC -7 hours
PST, PST8PDT	Pacific Standard Time, as UTC -8 hours
HST	Hawaiian Standard Time, as UTC -10 hours

### Table 20: Australia Time Zones

AustraliaFootnote.			
ACTFootnote.	Adelaide	Brisbane	Broken_Hill
Canberra	Currie	Darwin	Hobart
Lord_Howe	Lindeman	LHIFootnote.	Melbourne
North	NSWFootnote.	Perth	Queensland
South	Sydney	Tasmania	Victoria
West	Yancowinna		

<u>3456</u>

3 (1) Enter the country and city together with a forward slash (/) between them; for example, Australia/Currie.
4 (2) ACT = Australian Capital Territory
5 (3) LHI = Lord Howe Island

 $6 \quad (4) \text{ NSW} = \text{New South Wales}$ 

### Table 21: Asia Time Zones

AsiaFootnote.			
AdenFootnote.	Almaty	Amman	Anadyr
Aqtau	Aqtobe	Ashgabat	Ashkhabad
Baghdad	Bahrain	Baku	Bangkok
Beirut	Bishkek	Brunei	Calcutta
Choibalsan	Chongqing	Columbo	Damascus
Dhakar	Dili	Dubai	Dushanbe

AsiaFootnote.			
Gaza	Harbin	Hong_Kong	Hovd
Irkutsk	Istanbul	Jakarta	Jayapura
Jerusalem	Kabul	Kamchatka	Karachi
Kashgar	Katmandu	Kuala_Lumpur	Kuching
Kuwait	Krasnoyarsk		

<u>78</u>

<sup>7</sup> (1) The Asia time zone includes cities from East Asia, Southern Southeast Asia, West Asia, and Central Asia.

8 (2) Enter the region and city or country together separated by a forward slash (/); for example, Asia/Aden.

Several more time zones are available to you. On your Prime Infrastructure server, enter the **show timezones** command. A list of all of the time zones available in the Prime Infrastructure server appears. Choose the most appropriate one for your time zone.

#### Examples

ncs/admin(config)# clock timezone EST ncs/admin(config)# exit ncs/admin# show timezone EST ncs/admin#

	Description
show timezones	Displays a list of available time zones on the system.
show timezone	Displays the current time zone set on the system.

## do

do

To execute an EXEC-level command from configuration mode or any configuration submode, use the **do** command in any configuration mode.

do

## **Syntax Description** This command has no arguments or keywords.

#### Table 22: Command Options for the Do Command

	Description	
application install	Installs a specific application.	
application remove	Removes a specific application.	
application start	Starts or enables a specific application	
application stop	Stops or disables a specific application.	
application upgrade	Upgrades a specific application.	
backup	Performs a backup ( Prime Infrastructure and Cisco ADE OS) and places the backup in a repository.	
backup-logs	Performs a backup of all of the logs on the Prime Infrastructure server to a remote location.	
clock	Sets the system clock on the Prime Infrastructure server.	
configure	Enters configuration mode.	
сору	Copies any file from a source to a destination.	
debug	Displays any errors or events for various command situations; for example, backup and restore, configuration, copy, resource locking, file transfer, and user management.	
delete	Deletes a file on the Prime Infrastructure server.	
dir	Lists files on the Prime Infrastructure server.	
forceout	Forces the logout of all of the sessions of a specific Prime Infrastructure node user.	
halt	Disables or shuts down the Prime Infrastructure server.	

do

	Description	
help	Describes the help utility and how to use it on the Prime Infrastructure server.	
mkdir	Creates a new directory.	
nslookup	Queries the IPv4 address or hostname of a remote system.	
patch	Install System or Application patch.	
рер	Configures the Inline PEP node.	
ping	Determines the IPv4 network activity on a remote system.	
ping6	Determines the IPv6 network activity on a IPv6 remote system.	
reload	Reboots the Prime Infrastructure server.	
restore	Performs a restore and retrieves the backup out of a repository.	
rmdir	Removes an existing directory.	
show	Provides information about the Prime Infrastructure server.	
ssh	Starts an encrypted session with a remote system.	
tech	Provides Technical Assistance Center (TAC) commands.	
telnet	Establishes a Telnet connection to a remote system.	
terminal length	Sets terminal line parameters.	
terminal session-timeout	Sets the inactivity timeout for all terminal sessions.	
terminal session-welcome	Sets the welcome message on the system for all terminal sessions.	
terminal terminal-type	Specifies the type of terminal connected to the current line of the current session.	
traceroute	Traces the route of a remote IP address.	
undebug	Disables the output (display of errors or events) of the <b>debug</b> command for various command situations; for example, backup and restore, configuration, copy, resource locking, file transfer, and user management.	
write	Erases the startup configuration that forces the setup utility to run and prompts the network configuration, copies the running configuration to the startup configuration, and displays the running configuration on the console.	

do

```
Command Default No default behavior or values.
```

**Command Modes** Configuration

Use this command to execute EXEC commands (such as **show**, **clear**, and **debug** commands) while configuring your server. After the EXEC command executes, the system will return to the configuration mode that you were using.

#### Examples

```
ncs/admin(config)# do show run
Generating configuration...
hostname ncs
ip domain-name cisco.com
interface GigabitEthernet 0
  ip address 172.23.90.113 255.255.255.0
  ipv6 address autoconfig
ip name-server 172.16.168.183
ip default-gateway 172.23.90.1
clock timezone EST
ntp server time.nist.gov
username admin password hash $1$JbbHvKVG$xMZ/XL4tH15Knf.FfcZZr. role admin
service sshd
backup-staging-url nfs://loc-filer02a:/vol/local1/private1/jdoe
password-policy

  upper-case-required
  digit-required
  no-username
  disable-cisco-passwords
 min-password-length 6
logging localhost
logging loglevel 6
!
--More--
ncs/admin(config)#
```

# end

	To end the current configuration session and return to EXEC mode, use the <b>end</b> command in configuration mode.	
	end	
Syntax Description	This command has no arguments	or keywords.
Command Default	No default behavior or values.	
Command Modes	Configuration	
Usage Guidelines	This command brings you back to EXEC mode regardless of what configuration mode or submode you are in.	
	Use this command when you finish configuring the system and you want to return to EXEC mode to perform verification steps.	
Examples	ncs/admin(config)# <b>end</b> ncs/admin#	
<b>Related Commands</b>	Command	Description

Exits configuration mode.

server.

Closes the active terminal session by logging out of the Prime Infrastructure

exit

exit (EXEC)

## exit

To exit any configuration mode to the next-highest mode in the CLI mode hierarchy, use the exit command in configuration mode. exit **Syntax Description** This command has no arguments or keywords. **Command Default** No default behavior or values. **Command Modes** Configuration **Usage Guidelines** The exit command is used in the Prime Infrastructure server to exit the current command mode to the next highest command mode in the CLI mode hierarchy. For example, use the exit command in configuration mode to return to EXEC mode. Use the exit command in the configuration submodes to return to configuration mode. At the highest level, EXEC mode, the exit command exits the EXEC mode and disconnects from the Prime Infrastructure server (see exit, for a description of the exit (EXEC) command). Examples ncs/admin(config)# exit

ncs/admin#

Command	Description
end	Exits configuration mode.
exit (EXEC)	Closes the active terminal session by logging out of the Prime Infrastructure server.

# hostname

	To set the hostname of the system, use the <b>hostname</b> command in configuration mode. To delete the hostname from the system, use the <b>no</b> form of this command, which resets the system to localhost.	
	[no] hostname word	
Syntax Description	word	Name of the host. Contains at least 2 to 64 alphanumeric characters and an underscore ( _ ). The hostname must begin with a character that is not a space.
Command Default	No default behavior or va	lues.
Command Modes	Configuration	
Usage Guidelines		command, <b>hostname</b> only occurs once in the configuration of the system. The ne argument; otherwise, an error occurs.
Examples	<pre>hostname must contain one argument; otherwise, an error occurs. ncs/admin(config) # hostname ncs-1 Changing the hostname or IP may result in undesired side effects, such as installed application(s) being restarted. Are you sure you want to proceed? Use 'show application status ncs' CLI to verify all processes are in running state. ncs-1/admin(config) # ncs-1/admin# show application status ncs NCS Database listener is running, FID: 11142 NCS Database listener is stall initializing. NCS M&amp;T Session Database is running, PID: 11532 NCS M&amp;T Log Collector is running, PID: 11535 NCS M&amp;T Log Processor is running, PID: 11523 NCS M&amp;T Alert Process is runni</pre>	

# icmp echo

To configure the Internet Control Message Protocol (ICMP) echo responses, use the **icmp echo** command in configuration mode.

icmp echo {off | on}

Syntax Description	off	Disables ICMP echo response.
	on	Enables ICMP echo response.

**Command Default** The system behaves as if the ICMP echo response is on (enabled).

**Command Modes** Configuration

ncs/admin(config)# **icmp echo off** ncs/admin(config)#

Related	Commands
---------	----------

Examples

Command	Description
show icmp-status	Display ICMP echo response configuration information.

# interface

To configure an interface type and enter interface configuration mode, use the **interface** command in configuration mode.

Note

VMware virtual machine may have a number of interfaces available. This depends on how many network interfaces (NIC) are added to the virtual machine.

interface GigabitEthernet ip-address

Syntax Description	GigabitEthernet	Configures the Gigabit Ethernet interface.
	0 - 3	Number of the Gigabit Ethernet port to configure.

After you enter the Gigabit Ethernet port number in the **interface** command, you enter config-GigabitEthernet configuration submode (see the following Syntax Description).

do	EXEC command. Allows you to perform any EXEC commands in this mode (see do ).
end	Exits config-GigabitEthernet submode and returns you to EXEC mode.
exit	Exits the config-GigabitEthernet configuration submode.
ip	Sets IP address and netmask for the Ethernet interface (see ip address ).
ipv6	Configures the IPv6 autoconfiguration address and IPv6 address from DHCPv6 server. (see ipv6 address autoconfig and ipv6 address dhcp ).
no	<ul> <li>Negates the command in this mode. Two keywords are available:</li> <li>ip—Sets the IP address and netmask for the interface.</li> <li>shutdown—Shuts down the interface.</li> </ul>
shutdown	Shuts down the interface (see shutdown ).

**Command Default** No default behavior or values.

**Command Modes** Configuration

## **Usage Guidelines** You can use the **interface** command to configure subinterfaces to support various requirements.

### **Examples**

ncs/admin(config)# interface GigabitEthernet 0
ncs/admin(config-GigabitEthernet)#

Command	Description
show interface	Displays information about the system interfaces.
ip address (interface configuration mode)	Sets the IP address and netmask for the interface.
shutdown (interface configuration mode)	Shuts down the interface (see shutdown ).

# ipv6 address autoconfig

To enable IPv6 stateless autoconfiguration, use the **ipv6 address autoconfig** command in configuration mode. To remove the address from the interface, use the **no** form of this command.

[no] ipv6 address autoconfig [default]0

Syntax Description	default	(Optional) If a default router is selected on this interface, the default keyword causes a default route to be installed using that default router.	
		The <b>default</b> keyword can be specified only on one interface.	
Command Default	No default behavio	or or values.	
Command Modes	Configuration		
Usage Guidelines	IPv6 stateless autoconfiguration has the security downfall of having predictable IP addresses. This downfal is resolved with privacy extensions. You can verify that the privacy extensions feature is enabled using the <b>show</b> command.		
		configuration is enabled by default in Linux. Cisco ADE 2.0 shows the IPv6 address in the running configuration for any interface that is enabled.	
Examples	Example 1		
	ncs/admin(config ncs/admin(config ncs/admin(config ncs/admin#	<pre>igure terminal tion commands, one per line. End with CNTL/Z. g)# interface GigabitEthernet 0 g)# (config-GigabitEthernet)# ipv6 address autoconfig g)# (config-GigabitEthernet)# end nfiguration is enabled, the running configuration shows the interface settings similar to the</pre>	
	You can use the sh 2, you can see that using the stateless advertisement enab	2.23.90.116 255.255.255.0	

not have any scope outside the host. You will always see a link local address regardless of the IPv6 autoconfiguration or DHCPv6 configuration. The last address (starting with 2001) is obtained from a IPv6 DHCP server.

#### Example 2

```
ncs/admin# show interface GigabitEthernet 0
eth0 Link encap:Ethernet HWaddr 00:0C:29:AF:DA:05
inet addr:172.23.90.116 Bcast:172.23.90.255 Mask:255.255.255.0
inet6 addr: 3ffe:302:11:2:20c:29ff:feaf:da05/64 Scope:Global
inet6 addr: fe80::20c:29ff:feaf:da05/64 Scope:Link
inet6 addr: 2001:558:ff10:870:8000:29ff:fe36:200/64 Scope:Global
UP BROADCAST RUNNING MULTICAST MTU:1500 Metric:1
RX packets:77848 errors:0 dropped:0 overruns:0 frame:0
TX packets:23131 errors:0 dropped:0 overruns:0 carrier:0
collisions:0 txqueulen:1000
RX bytes:10699801 (10.2 MiB) TX bytes:3448374 (3.2 MiB)
Interrupt:59 Base address:0x2000
```

ncs/admin#

To verify that the privacy extensions feature is enabled, you can use the **show interface GigabitEthernet 0** command. You can see two autoconfiguration addresses: one address is without the privacy extensions, and the other is with the privacy extensions.

In the example 3 below, the MAC is 3ffe:302:11:2:20c:29ff:feaf:da05/64 and the non-RFC3041 address contains the MAC, and the privacy-extension address is 302:11:2:9d65:e608:59a9:d4b9/64.

The output appears similar to the following:

#### Example 3

```
ncs/admin# show interface GigabitEthernet 0
eth0 Link encap:Ethernet HWaddr 00:0C:29:AF:DA:05
inet addr:172.23.90.116 Bcast:172.23.90.255 Mask:255.255.255.0
inet6 addr: 3ffe:302:11:2:9d65:e608:59a9:d4b9/64 Scope:Global
inet6 addr: fe80::20c:29ff:feaf:da05/64 Scope:Global
inet6 addr: fe80::20c:29ff:feaf:da05/64 Scope:Link
UP BROADCAST RUNNING MULTICAST MTU:1500 Metric:1
RX packets:60606 errors:0 dropped:0 overruns:0 frame:0
TX packets:2771 errors:0 dropped:0 overruns:0 carrier:0
collisions:0 txqueuelen:1000
RX bytes:9430102 (8.9 MiB) TX bytes:466204 (455.2 KiB)
Interrupt:59 Base address:0x2000
```

ncs/admin#

Command	Description
show interface	Displays information about the system interfaces.
ip address (interface configuration mode)	Sets the IP address and netmask for the interface.
shutdown (interface configuration mode)	Shuts down the interface (see shutdown ).
ipv6 address dhcp	Enables IPv6 address DHCP on an interface.
show running-config	Displays the contents of the currently running configuration file or the configuration.

# ipv6 address dhcp

To enable IPv6 address DHCP, use the **ipv6 address dhcp** command in configuration mode. To remove the address from the interface, use the **no** form of this command.

[no] ipv6 address dhcp [rapid-commit] 0

Syntax Description	[rapid-commit]	(Optional) Allows the two-message exchange method for address assignment.	
	0	Gigabit Ethernet port number to be configured.	
Command Default	No default behavior o	r values.	
Command Modes	Configuration		
Usage Guidelines	None.		
Examples	<pre>ncs/admin# configure terminal Enter configuration commands, one per line. End with CNTL/Z. ncs/admin(config)# interface GigabitEthernet 0 ncs/admin(config-GigabitEthernet)# ipv6 address dhcp ncs/admin(config-GigabitEthernet)# end ncs/admin# When IPv6 DHCPv6 is enabled, the running configuration shows the interface settings similar to the following: ! interface GigabitEthernet 0 ip address 172.23.90.116 255.255.255.0 ipv6 address dhcp !</pre>		
Note	The IPv6 stateless autoconfiguration and IPv6 address DHCP are not mutually exclusive. It is possible to have both IPv6 stateless autoconfiguration and IPv6 address DHCP on the same interface. You can use the <b>show interface</b> to display what IPv6 addresses are in use for a particular interface. When both the IPv6 stateless autoconfiguration and IPv6 address DHCP are enabled, the running configuration shows the interface settings similar to the following:		

Command	Description
show interface	Displays information about the system interfaces.
ip address (interface configuration mode)	Sets the IP address and netmask for the interface.
shutdown (interface configuration mode)	Shuts down the interface (see shutdown ).
ipv6 address autoconfig	Enables IPv6 stateless autoconfiguration on an interface.
show running-config	Displays the contents of the currently running configuration file or the configuration.

# ip address

To set the IP address and netmask for the Ethernet interface, use the **ip address** command in interface configuration mode. To remove an IP address or disable IP processing, use the **no** form of this command.

[no] ip address ip-address netmask

Note

You can configure the same IP address on multiple interfaces. You might want to do this to limit the configuration steps that are needed to switch from using one interface to another.

Syntax Description	ip-address	IPv4 version IP address.
	netmask	Mask of the associated IP subnet.
Command Default	Enabled.	
Command Modes	Interface configuration	
Usage Guidelines	Requires exactly one ad	dress and one netmask; otherwise, an error occurs.
Examples	ncs/admin(config-Gig Changing the hostnam such as installed ap	

## **Related Commands**

Command	Description
shutdown (interface configuration mode)	Disables an interface (see shutdown ).
ip default-gateway	Sets the IP address of the default gateway of an interface.
show interface	Displays information about the system IP interfaces.
interface	Configures an interface type and enters the interface mode.

# ip default-gateway

To define or set a default gateway with an IP address, use the **ip default-gateway** command in configuration mode. To disable this function, use the **no** form of this command.

[no] ip default-gateway ip-address

Syntax Description	ip-address	IP address of the default gateway.
Command Default	Disabled.	
Command Modes	Configuration	
Usage Guidelines	If you enter more than one argument or no arguments at all, an error occurs.	
Examples	ncs/admin(config)# <b>ip default-gateway 209.165.202.129</b> ncs/admin(config)#	
<b>Related Commands</b>	Command	Description

Command	Description
ip address (interface configuration mode)	Sets the IP address and netmask for the Ethernet interface.

# ip domain-name

To define a default domain name that the Prime Infrastructure server uses to complete hostnames, use the **ip domain-name** command in configuration mode. To disable this function, use the **no** form of this command.

[no] ip domain-name word

Syntax Description	word Default domain name used to complete the hostnames. Contains at least 2 to 64 alphanumeric characters.
Command Default	Enabled.
Command Modes	Configuration
Usage Guidelines	If you enter more or fewer arguments, an error occurs.
Examples	ncs/admin(config)# <b>ip domain-name cisco.com</b> ncs/admin(config)#
<b>Related Commands</b>	Description

	Description
ip name-server	Sets the DNS servers for use during a DNS query.

# ip name-server

To set the Domain Name Server (DNS) servers for use during a DNS query, use the ip name-server command in configuration mode. You can configure one to three DNS servers. To disable this function, use the no form of this command.

Note Using the **no** form of this command removes all of the name servers from the configuration. Using the **no** form of this command and one of the IP names removes only that IP name server. [no] ip name-server *ip-address* [*ip-address*\*]} **Syntax Description** ip-address Address of a name server. (Optional) IP addresses of additional name servers. ip-address\* You can configure a maximum of three name Note servers. **Command Default** No default behavior or values. **Command Modes** Configuration **Usage Guidelines** The first name server that is added with the **ip name-server** command occupies the first position and the system uses that server first to resolve the IP addresses. You can add name servers to the system one at a time or all at once, until you reach the maximum (3). If you already configured the system with three name servers, you must remove at least one server to add additional name servers. To place a name server in the first position so that the subsystem uses it first, you must remove all name servers with the no form of this command before you proceed. **Examples** ncs/admin(config) # ip name-server 209.165.201.1

> To verify that NCS processes are running, use the 'show application status ncs' command. ncs/admin(config)#

You can choose not to restart the Prime Infrastructure server; nevertheless, the changes will take effect.

Related Commands	Command	Description
	ip domain-name	Defines a default domain name that the server uses to complete hostnames.

# ip route

To configure the static routes, use the **ip route** command in configuration mode. To remove static routes, use the **no** form of this command.

ip route prefix mask gateway ip-address

no ip route prefix mask

Syntax Description	prefix	IP route prefix for the destination.
	mask	Prefix mask for the destination.
	gateway	Route-specific gateway
	ip-address	IP address of the next hop that can be used to reach that network.
Command Default	No default behavio	nr or values

## **Command Default** No default behavior or values.

Configuration.

- **Usage Guidelines** Static routes are manually configured, which makes them inflexible (they cannot dynamically adapt to network topology changes), but extremely stable. Static routes optimize bandwidth utilization, because no routing updates need to be sent to maintain them. They also make it easy to enforce routing policy.
- Examples ncs/admin(config)# ip route 192.168.0.0 255.255.0.0 gateway 172.23.90.2 ncs/admin(config)#

# kron occurrence

To schedule one or more Command Scheduler commands to run at a specific date and time or a recurring level, use the kron occurrence command in configuration mode. To delete this schedule, use the no form of this command.

[no] kron {occurrence} occurrence-name

occurrence-name

**Syntax Description** 

Name of the occurrence. Up to 80 alphanumeric characters. (See the following note and Syntax Description.)

After you enter the occurrence-name in the kron occurrence command, you enter the config-occurrence configuration submode (see the following syntax description).

at	Identifies that the occurrence is to run at a specified calendar date and time. Usage: at [hh:mm] [day-of-week   day-of-month   month day-of-month].	
do	EXEC command. Allows you to perform any EXEC commands in this mode (see do ).	
end	Exits the kron-occurrence configuration submode and returns you to EXEC mode.	
exit	Exits the kron-occurrence configuration mode.	
no	<ul> <li>Negates the command in this mode.</li> <li>Three keywords are available: <ul> <li>at—Usage: at [<i>hh:mm</i>] [<i>day-of-week</i>   <i>day-of-month</i>   <i>month day-of-month</i>].</li> <li>policy-list—Specifies a policy list to be run by the occurrence. Up to 80 alphanumeric characters.</li> <li>recurring—Execution of the policy lists should be repeated.</li> </ul> </li> </ul>	
policy-list	Specifies a Command Scheduler policy list to be run by the occurrence.	
recurring	Identifies that the occurrences run on a recurring basis.	

**Command Default** No default behavior or values.

**Command Modes** 

Configuration

#### **Usage Guidelines**

Use the **kron occurrence** and **policy-list** commands to schedule one or more policy lists to run at the same time or interval.

Use the **kron policy-list** command in conjunction with the **cli** command to create a Command Scheduler policy that contains the EXEC CLI commands to be scheduled to run on the Prime Infrastructure server at a specified time. See the **kron policy-list** command.

```
Examples
```

Note

When you run the **kron** command, backup bundles are created with a unique name (by adding a time stamp) to ensure that the files do not overwrite each other.

#### **Example 1:Weekly Backup**

```
ncs/admin(config)# kron occurrence WeeklyBackup
ncs/admin(config-Occurrence)# at 14:35 Monday
ncs/admin(config-Occurrence)# policy-list SchedBackupPolicy
ncs/admin(config-Occurrence)# recurring
ncs/admin(config-Occurrence)# exit
ncs/admin(config)#
Example 2: Daily Backup
```

```
ncs/admin(config)# kron occurrence DailyBackup
ncs/admin(config-Occurrence)# at 02:00
ncs/admin(config-Occurrence)# exit
ncs/admin(config)#
```

Command	Description
kron policy-list	Specifies a name for a Command Scheduler policy.

# kron policy-list

To specify a name for a Command Scheduler policy and enter the kron-Policy List configuration submode, use the **kron policy-list** command in configuration mode. To delete a Command Scheduler policy, use the **no** form of this command.

[no] kron {policy-list} list-name

Syntax Description	policy-list	Specifies a name for Command Scheduler policies.
	list-name	Name of the policy list. Up to 80 alphanumeric characters.

After you enter the *list-name* in the **kron policy-list** command, you enter the config-Policy List configuration submode (see the following Syntax Description).

cli	Command to be executed by the scheduler. Up to 80 alphanumeric characters.
do	EXEC command. Allows you to perform any EXEC commands in this mode (see the do ) command.
end	Exits from the config-policy list configuration submode and returns you to EXEC mode.
exit	Exits this submode.
no	Negates the command in this mode. One keyword is available: • cli—Command to be executed by the scheduler.

**Command Default** No default behavior or values.

**Command Modes** Configuration

**Usage Guidelines** Use the **kron policy-list** command in conjunction with the **cli** command to create a Command Scheduler policy that contains the EXEC CLI commands to be scheduled to run on the Prime Infrastructure server at a specified time. Use the **kron occurrence** and **policy list** commands to schedule one or more policy lists to run at the same time or interval. See the **ip** route command.

#### **Examples**

ncs/admin(config)# kron policy-list SchedBackupMonday

ncs/admin(config-Policy List)# cli backup SchedBackupMonday repository SchedBackupRepo ncs/admin(config-Policy List)# exit ncs/admin(config)#

### **Related Commands**

Command	Description
• •	Specifies schedule parameters for a Command Scheduler occurrence and enters config-Occurrence configuration mode.

# logging

To enable the system to forward logs to a remote system or to configure the log level, use the **logging** command in configuration mode. To disable this function, use the **no** form of this command.

[no] logging {ip-address | hostname} {loglevel level}

Syntax Description	ip-address	IP address of remote system to which you forward logs. Up to 32 alphanumeric characters.
	hostname	Hostname of remote system to which you forward logs. Up to 32 alphanumeric characters.
	loglevel	The command to configure the log level for the <b>logging</b> command.
	level	Number of the desired priority level at which you set the log messages. Priority levels are (enter the number for the keyword):
		• 0-emerg—Emergencies: System unusable.
		• 1-alert—Alerts: Immediate action needed.
		• 2-crit—Critical: Critical conditions.
		• 3-err—Error: Error conditions.
		• 4-warn—Warning: Warning conditions.
		• 5-notif—Notifications: Normal but significant conditions.
		• 6-inform—(Default) Informational messages.
		• 7-debug—Debugging messages.
Command Default	No default behavior o	r values.
Command Modes	Configuration	
Usage Guidelines	This command require or more of these arguin	es an IP address or hostname or the <b>loglevel</b> keyword; an error occurs if you enter two ments.
Examples	Example 1	
	<pre>ncs/admin(config)# ncs/admin(config)#</pre>	logging 209.165.200.225

## Example 2

ncs/admin(config) # logging loglevel 0
ncs/admin(config) #

## **Related Commands**

Command	Description
show logging	Displays the list of logs for the system.

## ntp server

To allow for software clock synchronization by the NTP server for the system, use the **ntp server** command in configuration mode. Allows up to three servers. To disable this capability, use the **no** form of this command.

[no] ntp server {ip-address | hostname} [ip-address | hostname] [ip-address | hostname]

```
Syntax Description
                       ip-address | hostname
                                                 IP address or hostname of the server providing the clock synchronization.
                                                 Arguments are limited to 255 alphanumeric characters.
Command Default
                      No servers are configured by default.
Command Modes
                      Configuration
Usage Guidelines
                      Use this command if you want to allow the system to synchronize with a specified server.
                      To terminate NTP service on a device, you must enter the no ntp command without keywords or arguments.
                      For example, if you previously entered the ntp server command and you now want to remove not only the
                      server synchronization capability, but all NTP functions from the device, use the no ntp command without
                      any keywords. This command ensures that all NTP functions are disabled and that the NTP service also
                      terminates.
               Note
                       This command gives conflicting information during the sync process. The sync process can take up to 20
                       minutes to complete.
```

### **Examples**

```
ncs/admin(config) # ntp server ncs ncs1 ncs2
ncs/admin(config)#
ncs/admin# show ntp
Primary NTP
            : ncs
Secondary NTP : ncs1
Tertiary NTP : ncs2
synchronised to local net at stratum 11
  time correct to within 11 ms
  polling server every 1024 s
                    refid
    remote
                               st t when poll reach
                                                     delay
                                                            offset jitter
     ____

## **Related Commands**

Command	Description
show ntp	Displays the status information about the NTP associations.

# password-policy

To enable or configure the passwords on the system, use the **password-policy** command in configuration mode. To disable this function, use the **no** form of this command.

[no] password-policy option

Ì

Note

The **password-policy** command requires a policy option (see Syntax Description). You must enter the **password-expiration-enabled** command before the other password-expiration commands.

**Syntax Description** 

Different command options.

option

After you enter the **password-policy** command, you can enter config-password-policy configuration submode.

digit-required	Requires a digit in the password.
disable-repeat-characters	Disables the ability of the password to contain more than four identical
	characters.
disable-cisco-password	Disables the ability to use the word Cisco or any combination as the
	password.
do	EXEC command.
end	Exits from configure mode.
exit	Exits from this submode.
lower-case-required	Requires a lowercase letter in the password.
min-password-length	Specifies a minimum number of characters for a valid password. Integer
	length from 0 to 4,294,967,295.
no	Negates a command or set its defaults.
no-previous-password	Prevents users from reusing a part of their previous password.
	revents users from reasing a part of then previous password.
no-username	Prohibits users from reusing their username as a part of a password.
password-expiration-days	Number of days until a password expires. Integer length from 0 to 80.

password-expiration-enabled	Enables password expiration.
	<b>Note</b> You must enter the <b>password-expiration-enabled</b> command before the other password-expiration commands.
password-expiration-warning	Number of days before expiration that warnings of impending expiration begin. Integer length from 0 to 4,294,967,295.
password-lock-enabled	Locks a password after several failures.
password-lock-retry-count	Number of failed attempts before password locks. Integer length from 0 to 4,294,967,295.
upper-case-required	Requires an uppercase letter in the password.
special-required	Requires a special character in the password.

**Command Default** No default behavior or values.

**Command Modes** Configuration

**Examples** 

ncs/admin(config)# password-policy ncs/admin(config-password-policy)# password-expiration-days 30 ncs/admin(config-password-policy)# exit ncs/admin(config)#

# repository

To enter the repository submode for configuration of backups, use the **repository** command in configuration mode.

repository repository-name

repository-name

**Syntax Description** 

Name of repository. Up to 80 alphanumeric characters.

After you enter the name of the repository in the **repository** command, you enter repository configuration submode.

do	EXEC command.
end	Exits repository config submode and returns you to EXEC mode.
exit	Exits this mode.
no	Negates the command in this mode.
	Two keywords are available:
	• url—Repository URL.
	• user—Repository username and password for access.
url	URL of the repository. Up to 80 alphanumeric characters (see Table A-20).
user	Configure the username and password for access. Up to 30 alphanumeric characters.

### Table 23: URL Keywords

Keyword	Source of Destination
word	Enter the repository URL, including server and path info. Up to 80 alphanumeric characters.
cdrom:	Local CD-ROM drive (read only).

Keyword	Source of Destination
disk:	Local storage.
	You can enter the <b>show repository</b> <i>repository_name</i> command to view all of the files in the local repository.
	<b>Note</b> All local repositories are created on the /localdisk partition. When you specify disk:/ in the repository URL, the system creates directories in a path that is relative to /localdisk. For example, if you entered <b>disk:/backup</b> , the directory is created at /localdisk/backup.
ftp:	Source or destination URL for an FTP network server. Use url ftp://server/path(1).
nfs:	Source or destination URL for an NFS network server. Use url nfs://server:path1.
sftp:	Source or destination URL for an SFTP network server. Use url sftp://server/path1.
tftp:	Source or destination URL for a TFTP network server. Use url tftp://server/path1.
	<b>Note</b> You cannot use a TFTP repository for performing a Prime Infrastructure upgrade.

**Command Default** No default behavior or values.

## **Command Modes** Configuration

## **Examples** Example 1

```
ncs/admin# configure termainal
ncs/admin(config)# repository myrepository
ncs/admin(config-Repository)# url sftp://example.com/repository/system1
ncs/admin(config-Repository)# user abcd password example
ncs/admin(config-Repository)# exit
ncs/admin(config)# exit
ncs/admin(
Example 2
```

```
ncs/admin# configure termainal
ncs/admin(config)# repository myrepository
ncs/admin(config-Repository)# url disk:/
ncs/admin(config-Repository)# user xyz password plain example
ncs/admin(config-Repository)# exit
ncs/admin(config)# exit
ncs/admin#
```

#### **Related Commands**

ds	Command	Description
	backup	Performs a backup (Prime Infrastructure and Cisco ADE OS) and places the backup in a repository.

Command	Description
restore	Performs a restore and takes the backup out of a repository.
show backup history	Displays the backup history of the system.
show repository	Displays the available backup files located on a specific repository.

# service

	To specify a service to manage, use the <b>service</b> command in configuration mode. To disable this function, use the <b>no</b> form of this command.
	[no] service sshd
Syntax Description	sshd Secure Shell Daemon. The daemon program for SSH.
Command Default	No default behavior or values.
Command Modes	Configuration
Examples	<pre>ncs/admin(config)# service sshd ncs/admin(config)#</pre>

# shutdown

To shut down an interface, use the **shutdown** command in interface configuration mode. To disable this function, use the no form of this command. [no] shutdown **Syntax Description** This command has no arguments or keywords. **Command Default** No default behavior or values. **Command Modes** Interface **Usage Guidelines** When you shut down an interface using this command, you lose connectivity to the Cisco ISE-3315 appliance through that interface (even though the appliance is still powered on). However, if you have configured the second interface on the appliance with a different IP and have not shut down that interface, you can access the appliance through that second interface. To shut down an interface, you can also modify the ifcfg-eth[0,1] file, which is located at /etc/sysconfig/network-scripts, using the ONBOOT parameter: • Disable an interface: set ONBOOT="no" • Enable an interface: set ONBOOT="yes" You can also use the **no shutdown** command to enable an interface. Examples ncs/admin(config)# interface GigabitEthernet 0 ncs/admin(config-GigabitEthernet)# shutdown **Related Commands** Command Description interface Configures an interface type and enters interface mode. ip address (interface Sets the IP address and netmask for the Ethernet interface. configuration mode) show interface Displays information about the system IP interfaces. ip default-gateway Sets the IP address of the default gateway of an interface.

# snmp-server community

To set up the community access string to permit access to the Simple Network Management Protocol (SNMP), use the **snmp-server community** command in configuration mode. To disable this function, use the **no** form of this command.

[no] snmp-server community word ro

Syntax Description	word	Accessing string that functions much like a password and allows access to SNMP. No blank spaces allowed. Up to 255 alphanumeric characters.
	го	Specifies read-only access.
Command Default	No default behavior or va	alues.
Command Modes	Configuration	
Usage Guidelines	The <b>snmp-server comm</b> error occurs.	<b>unity</b> command requires a community string and the <b>ro</b> argument; otherwise, an
Examples	ncs/admin(config)# <b>snmp-server community new ro</b> ncs/admin(config)#	
<b>Related Commands</b>	Command	Description
	snmp-server host	Sends traps to a remote system

Commanu	Description
snmp-server host	Sends traps to a remote system.
snmp-server location	Configures the SNMP location MIB value on the system.
snmp-server contact	Configures the SNMP contact MIB value on the system.

# snmp-server contact

To configure the SNMP contact Management Information Base (MIB) value on the system, use the **snmp-server contact** command in configuration mode. To remove the system contact information, use the **no** form of this command.

[no] snmp-server contact word

Syntax Description		String that describes the system contact information of the node. Up to 255 alphanumeric characters.
Command Default	No default behavior or valu	es.
Command Modes	Configuration	
Usage Guidelines	None.	
Examples	ncs/admin(config)# <b>snmp-server contact Abcd</b> ncs/admin(config)#	
<b>Related Commands</b>	Command	Description
	snmp-server host	Sends traps to a remote system.
	snmp-server community	Sets up the community access string to permit access to the SNMP.
	snmp-server location	Configures the SNMP location MIB value on the system.

# snmp-server host

To send SNMP traps to a remote user, use the **snmp-server host** command in configuration mode. To remove trap forwarding, use the **no** form of this command.

[no] snmp-server host {ip-address | hostname} version {1 | 2c} community

Syntax Description	ip-address	IP address of the SNMP notification host. Up to 32 alphanumeric characters
	hostname	Name of the SNMP notification host. Up to 32 alphanumeric characters.
	<b>version</b> {1   2c}	(Optional) Version of the SNMP used to send the traps. Default = 1.
		If you use the version keyword, specify one of the following keywords:
		• 1—SNMPv1.
		• 2c—SNMPv2C.
	community	Password-like community string that is sent with the notification operation.
Command Modes Usage Guidelines	Configuration The command takes argu	uments as listed; otherwise, an error occurs.
Examples		nmp-server community new ro nmp-server host 209.165.202.129 version 1 password
Related Commands	Command	Description
	snmp-server communit	y Sets up the community access string to permit access to SNMP.

Configures the SNMP location MIB value on the system.

Configures the SNMP contact MIB value on the system.

snmp-server location

snmp-server contact

# snmp-server location

To configure the SNMP location MIB value on the system, use the **snmp-server location** command in configuration mode. To remove the system location information, use the **no** form of this command.

[no] snmp-server location word

snmp-server contact

Syntax Description		tring that describes the physical location information of the system. Up to 255 lphanumeric characters.	
Command Default			
	No default behavior or value	S.	
Command Modes	Configuration		
Usage Guidelines	We recommend that you use underscores (_) or hyphens (-) between the terms within the <i>word</i> string. If you use spaces between terms within the <i>word</i> string, you must enclose the string in quotation marks (").		
Examples	Example 1		
	ncs/admin(config)# <b>snmp-</b> ncs/admin(config)# <b>Example 2</b>	server location Building_3/Room_214	
	<pre>ncs/admin(config)# snmp-server location "Building 3/Room 214" ncs/admin(config)#</pre>		
<b>Related Commands</b>	Command	Description	
	snmp-server host	Sends traps to a remote system.	
	snmp-server community	Sets up the community access string to permit access to SNMP.	

Configures the SNMP location MIB value on the system.

## username

To add a user who can access the Cisco ISE-3315 using SSH, use the **username** command in configuration mode. If the user already exists, the password, the privilege level, or both change with this command. To delete the user from the system, use the **no** form of this command.

[no] username username password {hash | plain} password role {admin | user] [disabled [email email-address]] [email email-address]

For an existing user, use the following command option:

username username password role {admin | user} password

Syntax Description	username	You should enter only one word which can include hyphen (-), underscore (_) and period (.).
		<b>Note</b> Only alphanumeric characters are allowed at an initial setup.
	password	The command to use specify password and user role.
	password	Password character length up to 40 alphanumeric characters. You must specify the password for all new users.
	hash   plain	Type of password. Up to 34 alphanumeric characters.
	role admin   user	Sets the privilege level for the user.
	disabled	Disables the user according to the user's email address.
	email email-address	The user's email address. For example, user1@example.com.
Command Default	The initial user during s	etup.

## **Command Modes** Configuration

**Usage Guidelines** The **username** command requires that the username and password keywords precede the hash | plain and the admin | user options.

#### **Examples** Exa

Example 1

ncs/admin(config)# username admin password hash ###### role admin ncs/admin(config)#

#### Example 2

ncs/admin(config)# username admin password plain Secr3tp@swd role admin ncs/admin(config)#

## Example 3

ncs/admin(config)# username admin password plain Secr3tp@swd role admin email admin123@example.com ncs/admin(config)#

## **Related Commands**

	Description
password-policy	Enables and configures the password policy.
show users	Displays a list of users and their privilege level. It also displays a list of logged-in users.

# Glossary

# A

## ADE

Application Deployment Engine

## С

## CDP

Cisco Discovery Protocol. A proprietary tool that network administrators use to access a summary of protocol and address information about other devices that are directly connected to the device initiating the command

CDP runs over the data-link layer connecting the physical media to the upper-layer protocols. Because CDP operates at this level, two or more CDP devices that support different network layer protocols (for example, IP and Novell IPX) can learn about each other.

Physical media supporting the Subnetwork Access Protocol (SNAP) encapsulation connect CDP devices. These can include all LANs, Frame Relay, and other WANs, and ATM networks.

### **Cisco Discovery Protocol**

See CDP

## CLI

Command-line interface. An interface through which the user can interact with the software operating system by entering commands and optional arguments.

### client

Node or software program that requests services from a server. For example, the Secure Shell (SSH) client.

See also server.

### command-line interface

See CLI

### community string

A text string that acts as a password, which is used to authenticate messages sent between a management station and an IP Transfer Point (ITP) containing a SNMP agent. The community string sends in every packet between the manager and the agent.

## D

## DNS

Domain Name System. DNS associates various sorts of information with so-called domain names; most importantly, it serves as the "phone book" for the Internet: it translates human-readable computer hostnames into the IP addresses that networking equipment needs for delivering information. It also stores other information, such as the list of mail exchange servers that accept e-mail for a given domain. In providing a worldwide keyword-based redirection service, the DNS is an essential component of contemporary Internet use.

#### DNS name

Initial name of a node.

#### domain name

The style of identifier—a sequence of case-insensitive ASCII labels separated by dots (.) (for example, example.com.)—defined for subtrees in the Internet DNS [R1034] and used in other Internet identifiers, such as hostnames, mailbox names, and URLs.

#### **Domain Name System**

See DNS

#### F

## FTP

File Transfer Protocol. Application protocol, part of the TCP/IP protocol stack, used for transferring files between network nodes. FTP is defined in RFC 959.

## H

### host

Computer system on a network. Similar to the term node; except, that host usually implies a computer system, whereas node generally applies to any network system, including access servers and ITPs.

#### host name

The name of the operating system's server or computer that contains the major program files.

## I IP

Internet Protocol. Network layer protocol in the TCP/IP stack offering a connectionless internetwork service. IP provides features for addressing, type-of-service specification, fragmentation and reassembly, and security. Documented in RFC 791.

### **IP** address

32-bit address assigned to hosts by using TCP/IP. An IP address belongs to one of five classes (A, B, C, D, or E) and written as 4 octets separated by periods (.) (dotted-decimal format). Each address consists of a network number, an optional subnetwork number, and a host number. For routing, the network and subnetwork numbers stay together, while the host number addresses an individual host within the network or subnetwork. A subnet mask extracts network and subnetwork information from the IP address.

### Μ

### MIB

Management Information Base. A directory listing information used and maintained by a network's management protocol, such as SNMP.

### Ν

#### name server

A name server is a computer server that implements a name-service protocol. It will normally map a computer-usable identifier of a host to a human-usable identifier for that host.

#### **Network Time Protocol**

See NTP.

### NTP

Network Time Protocol. A protocol for synchronizing the clocks of computer systems over packet-switched, variable-latency data networks. NTP uses User Datagram Protocol (UDP) port 123 as its transport layer. NTP is designed particularly to resist the effects of variable latency (jitter).

NTP is one of the oldest Internet protocols still in use (since before 1985). NTP was originally designed by Dave Mills of the University of Delaware, who still maintains it, along with a team of volunteers.

NTP is not related to the much simpler DAYTIME (RFC 867) and TIME (RFC 868) protocols.

#### NFS

Network File System. NFS allows a system to share directories and files with others over a network. By using NFS, users and programs can access files on remote systems almost as if they were local files. In Prime Infrastructure, the NFS must be open shared which basically mean that it should not need any credentials.

# Р

## Port

In IP terminology, an upper-layer process that receives information from lower layers. Each numbered port associates with a specific process. For example, SMTP associates with port 25.

#### S

### Secure Shell

See SSH.

#### server

An application or device that performs services for connected clients as part of a client-server architecture. A server application, as defined by RFC 2616 (HTTP/1.1), is "an application program that accepts connections in order to service requests by sending back responses." Server computers are devices designed to run such an application or applications, often for extended periods of time, with minimal human direction. Examples of servers include web servers, e-mail servers, and file servers.

See also client.

#### Simple Network Management Protocol

See SNMP.

#### SSH

Secure Shell. A network protocol in which data is exchanged over a secure channel between two computers. Encryption provides confidentiality and integrity of data. SSH uses public-key cryptography to authenticate the remote computer and allow the remote computer to authenticate the user.

SSH is typically used to log in to a remote machine and execute commands; but, it also supports tunneling, forwarding arbitrary TCP ports, and X Window System (X11) connections. It can transfer files by using the associated SSH File Transfer Protocol (SFTP) or Secure Copy (SCP) protocols.

An SSH server, by default, listens on the standard TCP port 22. An SSH client program is typically used for establishing connections to an sshd daemon accepting remote connections. Both are commonly present on most modern operating systems. Proprietary, freeware, and open-source versions of various levels of complexity and completeness exist.

#### SNMP

Simple Network Management Protocol. Network management protocol used almost exclusively in TCP/IP networks. SNMP provides a means to monitor and control network devices, and to manage configurations, statistics collection, performance, and security.

#### SNMPv1

SNMPv1 is a simple request/response protocol. In the SNMPv1 framework, the network-management system installed a request, and managed devices return responses.

#### SNMPv2C

The second release of SNMP, described in RFC 1902. It provides additions to data types, counter size, and protocol operations. SNMPv2C support includes a bulk-retrieval mechanism and more detailed error message reporting to management stations. The bulk-retrieval mechanism supports the retrieval of tables and large quantities of information, minimizing the number of round-trip transmissions required. SNMPv2C improved error-handling support includes expanded error codes that distinguish different kinds of error conditions; these conditions are reported through a single error code in SNMPv1. Error return codes now report the error type. Three kinds of exceptions are also reported: No such object, No such instance, and End of MIB view.

## Т

#### ТСР

Transmission Control Protocol. Connection-oriented transport-layer protocol that provides reliable full-duplex data transmission. Part of the TCP/IP protocol stack.

#### Telnet

Telnet (TELetype NETwork). A network protocol used on the Internet or LAN connections. It was developed in 1969 beginning with RFC 0015 and standardized as IETF STD 8, one of the first Internet standards.

The term Telnet also refers to software that implements the client part of the protocol. Telnet clients have been available on most UNIX systems for many years and are available for virtually all platforms. Most network equipment and operating systems with a TCP/IP stack support some kind of Telnet service server for their remote configuration (including ones based on Windows NT). Recently, Secure Shell has begun to dominate remote access for UNIX-based machines.

Most often, a user telnets to a UNIX-like server system or a simple network device such as a switch. For example, you might "telnet in from home to check your e-mail at work." In doing so, you would be using a Telnet client to connect from your computer to one of your servers. Once the connection is established, you would then log in with your account information and execute the operating system commands remotely on that computer, such as ls or cd.

## TFTP

Trivial File Transfer Protocol. Simplified version of FTP that allows files to be transferred from one computer to another over a network.

#### **Transmission Control Protocol**

See TCP.

#### **Trivial File Transfer Protocol**

See TFTP.

## U UDI

Unique Device Identifier. Each identifiable product is an entity, as defined by the Entity MIB (RFC 2737) and its supporting documents. Some entities, such as a chassis, will have subentities like slots. An Ethernet switch might be a member of a super entity like a stack. Most Cisco entities that are orderable products will leave the factory with an assigned UDI. The UDI information is printed on a label that is affixed to the physical hardware device, and it is also stored electronically on the device in order to facilitate remote retrieval.

A UDI consists of the following elements: product identifier (PID), version identifier (VID), and serial number (SN).

The PID is the name by which the product can be ordered; it has been historically called the "Product Name" or "Part Number." You use this identifier to order an exact replacement part.

The VID is the version of the product. Whenever a product is revised, the VID is incremented, according to a rigorous process derived from Telcordia GR-209-CORE, an industry guideline that governs product change notices.

The SN is the vendor-unique serialization of the product. Each manufactured product carries a unique serial number assigned at the factory, which cannot be changed in the field. This number identifies an individual, specific instance of a product.

#### **Unique Device Identifier**

See UDI.
