Cisco OnPlus Service

Enjoy Managed Network Services, Delivered by Your Partner, Backed by Cisco

In a fast-moving business world, you depend on your network more than ever to power your business. Your customers and business partners expect close communication and responsive service. At the same time, your employees are working from more locations, using everything from PCs to smart phones and tablet computers. Keeping your employees connected to the people, tools, and information they need—anytime, anywhere—is critical.

To meet these challenges, businesses like yours are turning to managed services from their IT providers to help ensure that their networks stay up and running and up-to-date. With managed services, your IT provider takes care of your technology, freeing you to focus on your business. Affordable fixed fees help make costs more predictable and minimize ad-hoc costs.

Delivering Reliable, Worry-Free Network Services

Cisco OnPlus™ Service supports the managed network services your Cisco partner delivers by providing safe, highly secure, reliable visibility into your network.

To set up the service, your Cisco partner will install a Cisco OnPlus 100 Network Agent into your network. This lightweight appliance discovers most devices on your network and transmits the information to a secure data center.

This information will enable your partner to monitor, manage, and maintain your network—to fine-tune performance, discover issues faster, and resolve problems before they affect your business.

Protecting Your Network Investment

Cisco OnPlus Service is much more than a network troubleshooting tool. It also provides proactive monitoring and reporting that helps your Cisco partner keep your network running at its best.

Benefits for Your Business

- Solves issues before it impacts your network
- Provides reports that details network performance
- Improves performance and network uptime through proactive management
- Sends your IT partner immediate network alerts
- Keeps equipment up to date with latest firmware

For example, Cisco OnPlus Service can alert your provider about firmware updates to keep your Cisco® equipment up to date. The service can even advise your provider when service contracts and warranties will expire. With OnPlus Service, you can rest assured that your network will always have the latest features and current service protection, for consistently optimal performance.

Complete Security and Peace of Mind

When your most important business communications and customer information reside on the network, you need to be sure that your network data is safe and secure. Cisco OnPlus Service collects statistics specifically related to the network, but does not view nor collect business data. You will always have peace of mind in knowing that your key business information and communications will stay highly secure.

Getting Started Is Easy

Many businesses like yours are choosing managed services as a reliable, cost-effective way to support their most critical business operations. Your IT provider can help you set up a managed service that's right for you. For more information, contact your authorized Cisco reseller.
