Cisco TelePresence Solution

Reinvent Business Processes with Cisco TelePresence

The Cisco TelePresence® solution offers the easiest, most dynamic way for dispersed teams to innovate, troubleshoot, and collaborate - and it is not just for boardrooms any more. Use the power of In-Person collaboration across your organization - and beyond - to transform business processes with partners, suppliers, vendors, and even customers.

What started as a means for cutting travel costs and saving time has become a crucial tool for creating a competitive advantage. Cisco TelePresence lets you:

- Bring together a group of experts as you need them to resolve issues real time
- Make business-critical decisions faster by assembling the right resources at the right time
- Build trust and relationships between co-workers and with partners or customers
- Increase productivity with more collaboration and less travel

- Provide high-touch customer service and accelerate sales cycles
- Unify your entire supply chain and reduce time to market
- Train remote teams and scale expertise across the globe
- Promote business and increase your differentiation by making it easy for your teams to collaborate, innovate, and resolve problems

Cisco TelePresence transforms business models.

Bring the Power of In-Person to More People in More Places

Cisco TelePresence Endpoints

The broad range of Cisco TelePresence Endpoints make In-Person experiences possible for businesses of all sizes, with solutions for everything from multiscreen, immersive group meetings to desktop systems and video-enabled phones for individuals.

Cisco TelePresence Cloud Solutions and Services

Solutions or Businesses

- Managed and Hosted Cisco TelePresence Services
- Cisco WebEx Telepresence
- Public Cisco TelePresence Suites

Service Creation Solutions for Service Providers

- Cisco TelePresence Exchange System

Cisco TelePresence as a Service

The Cisco TelePresence cloud services and exchange solutions extend the Cisco TelePresence endpoints and infrastructure portfolio enabling customers to scale their deployments more broadly as well as to enable new customers to more rapidly obtain the benefits of telepresence within their organization.

Cisco TelePresence cloud services and solutions are built to deliver flexible deployment and service models with highly scalable conferencing, advanced media solutions for interoperability and the power to easily extend reach of video communities through secure intercompany and interprovider telepresence and options such as public telepresence suites.

- For enterprise organizations, managed and hosted telepresence services delivered by Cisco partners enables new service models and the ability to rapidly augment and scale existing premise based deployments to reach a broader community of telepresence and video users. Public Cisco TelePresence Suites further extend the ability to collaborate with remote users and travelers at convenient public locations around the world

- For smaller organizations just getting started with video, Cisco WebEx Telepresence is a cloud based subscription service for video calling that operates over an existing broadband connection

- For service providers, Cisco offers scalable infrastructure, multitenant solution platforms and validated architectures to deliver a range of managed and hosted telepresence services including advanced cloud-based services for multimedia conferencing, interoperability, and the ability to securely connect to organizations across enterprise and provider boundaries. The Cisco TelePresence Exchange System is a service creation platform for providers to create customized cloud –based Telepresence services
