High-Performance, Highly Secure Connectivity for the Small Office

Connecting your employees to each other and your business to the world is an absolute requirement in today's always-on environment. As large files and streaming video become more common, even a small office needs a combination of performance and security to help keep employees productive, whether they are working in the office or on the road.

The Cisco RV220W Network Security Firewall delivers high-performance, highly secure, flexible wired and wireless connectivity—to the Internet, other offices, and employees working remotely—in a device that is easy to use and affordable for a small office. The available Cisco ProtectLink Web cloud-based security service extends protection to help keep your network safe.

With the Cisco RV220W Network Security Firewall, you get:

High-speed wireless networking: The Cisco RV220W includes a built-in, high-speed, selectable dual-band 802.11n wireless access point, supporting both 2.4 and 5 GHz, to allow you to minimize interference for applications such as voice and video and deliver a better overall experience for your wireless users.

Strong security: A proven firewall with advanced features is just the first line of defense provided by the Cisco RV220W. You can also divide your wireless or wired network into four separate, virtual networks to control access—even enable secure wireless access for your guests—to further protect sensitive information.

Flexible, highly secure VPN connectivity: The Cisco RV220W supports both IP Security (IPsec) and Secure Sockets Layer (SSL) VPN connections. SSL VPN is useful because it lets you to give access to business partners and others just to specific applications—using only a standard web browser—without exposing your entire network and data.

Ease of use: A simple, intuitive, browser-based device manager makes the RV220W easy to set up and use. Support for the Cisco FindIT Network Discovery Utility offers even more insight into the Cisco Small Business devices in your network.

Services and support: The Cisco RV220W comes with a limited lifetime hardware warranty and telephone technical support for the first 12 months. Cisco offers global support for Cisco Small Business products through the Small Business Support Center, whose highly trained staff can help you resolve technical issues with your RV220W. In addition, you can add 3-year peace of mind support by purchasing the Cisco Small Business Support Service, which includes next-business-day advance hardware replacement, should that be required. We know that downtime is not an option for small businesses. That's why Cisco—and your Cisco partner—offer support options to keep your business running smoothly.
