

Optoelectronics

Analog Reverse Optical Transmitters with Thermal Compensation for Scientific Atlanta® Nodes

Description

The Models 6940, 6942, 6944, GainMaker® and GS7000 Nodes may be equipped with 1310 nm, Coarse Wave Division Multiplexing (CWDM), or Dense Wave Division Multiplexing (DWDM) analog reverse optical transmitters to facilitate reverse communications from node to headend or hub site. These reverse optical transmitters are now thermally compensated for improved performance over temperature.

The CWDM reverse optical transmitter is offered in a choice of 8 wavelengths from 1470 to 1610 nm. Up to 8 CWDM reverse optical transmitters can share a common return fiber when used with accompanying multiplexing and demultiplexing passive optics.

The DWDM reverse optical transmitter is offered in a choice of 40 wavelengths from 1530.33 to 1560.61 nm. Multiple DWDM reverse optical transmitters can share a common return fiber when used with accompanying multiplexing and demultiplexing passive optics.

All of these reverse optical transmitters incorporate distributed feedback (DFB) lasers, which are best suited for high-capacity reverse traffic. They are available in both standard and high gain versions, in order to allow flexibility in reverse path design. The high gain versions are typically used in the Model 6944, 6942, and GS7000 segmentable nodes. The standard gain versions are typically used in the Model 6940 and GainMaker nodes. All optical transmitters used in the GS7000 Node have a new high profile module cover that includes both a self-contained fiber pigtail storage area and an integrated pull ring for easier module installation and removal.

The reverse optical transmitters specified in this data sheet include both a Power On LED and an Optical Power Alert LED, enabling quick visual confirmation of operational status. A DC test point that is scaled to the optical output power is also included.

Optionally, to help ensure maximum reliability and quick fault resolution, the reverse transmitters can be remotely monitored using the Scientific-Atlanta ROSA®/Transmission Network Control System (TNCS).

Features

- Compact modular design for simple installation and removal
- Thermally Compensated for improved performance over temperature
- Power On and Optical Power Alert LED indicators
- DC test point scaled to optical output power
- Plug-in input attenuator allows easy adjustment of RF drive level
- Provisioned with network monitoring capability (TNCS system required)

Standard DFB Reverse Transmitter Module

High Gain DFB Reverse Transmitter Modules

***Note concerning the transmitter module RF test point (TP):**

It is important to understand the RF level relationship between the RF test point and the transmitter module RF input. With a 0 dB pad installed in the plug-in pad location:

For all thermally compensated transmitters (whether *standard* or *high gain*), add 20 dB to the level measured at the test point to determine the module RF input level (the test point is -20 dB relative to the module input).

DFB Reverse Transmitter Module Specifications

Noise Power Ratio (NPR) Performance		See plot	See plot
RF Test Point -relative to transmitter RF input (± 1 dB)	dB	-20	-20
			3

Notes:

1. Frequency response for transmitter (Tx) module only. Does not include the frequency response contribution of an optical receiver.
2. This is the RF level that produces 100% composite Optical Modulation Index (OMI) with a 0 dB Tx input pad at room temperature. This is used for reference purposes only and is NOT the recommended RF drive level. Consult with Scientific-Atlanta's Applications Engineering group in order to determine the appropriate RF drive level for a particular application.
3. The RF level measured at the Tx module's RF test point is relative to the Tx module RF input as specified, with a 0 dB input pad installed.

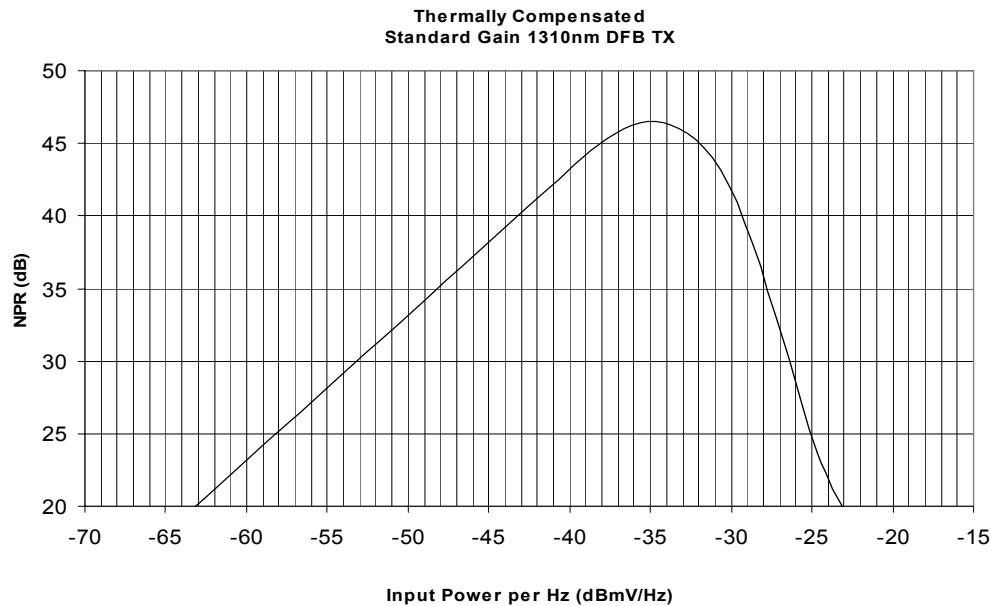

Electrical		Units	Component DC Power Consumption

Using the NPR Link Loss Correction Factor (applies only to transmitters on this data sheet)

The NPR performance plots contained in this document depict the NPR performance on a reference 7 dB fiber optic link (11 dB for DWDM).

With other link losses, both the:

- NPR dynamic range for a given minimum NPR (C/N) performance
- NPR value for a given transmitter RF input level

will vary from that shown on the reference 7 dB link plots.

To determine an NPR *dynamic range* for a different link loss, add (or subtract) the correction factor associated with the desired link loss to (or from) the dynamic range shown on the reference 7 dB link NPR plot. Note that the associated increase (or decrease) in dynamic range affects only the left side of the NPR curve (minimum RF input side) since that is the portion of the curve affected by changes to the traditional noise sources associated with the optical link.

To determine an NPR *value* for a different link loss, add (or subtract) the correction factor associated with the desired link loss to (or from) the NPR value shown on the 7 dB link NPR plot for a given RF input level. Again, only the NPR values on the left side of the NPR curve (pre-peak values) are to be adjusted. The NPR values and slope associated with the right side of the NPR curve (post peak values) are primarily due to laser clipping at high RF input levels, and therefore do not vary appreciably with link loss.

Ordering Information

The analog reverse optical transmitters for Scientific Atlanta nodes are applicable for a wide variety of station configurations. Please consult with Sales and Applications Engineering to determine the most suitable reverse transmitter configuration for your particular application.

For Use in GainMaker and 6940 Nodes – Standard Gain

DWDM, ITU Grid, CH. 26, 1556.55 nm, Analog, SC/APC	4022938.26
DWDM, ITU Grid, CH. 27, 1555.75 nm, Analog, SC/APC	4022938.27
DWDM, ITU Grid, CH. 28, 1554.94 nm, Analog, SC/APC	4022938.28
DWDM, ITU Grid, CH. 29, 1554.13 nm, Analog, SC/APC	4022938.29
DWDM, ITU Grid, CH. 30, 1553.33 nm, Analog, SC/APC	4022938.30
DWDM, ITU Grid, CH. 31, 1552.52 nm, Analog, SC/APC	4022938.31
DWDM, ITU Grid, CH. 32, 1551.72 nm, Analog, SC/APC	4022938.32
DWDM, ITU Grid, CH. 33, 1550.92 nm, Analog, SC/APC	4022938.33
DWDM, ITU Grid, CH. 34, 1550.12 nm, Analog, SC/APC	4022938.34
DWDM, ITU Grid, CH. 35, 1549.32 nm, Analog, SC/APC	4022938.35
DWDM, ITU Grid, CH. 36, 1548.51 nm, Analog, SC/APC	4022938.36
DWDM, ITU Grid, CH. 37, 1547.72 nm, Analog, SC/APC	4022938.37
DWDM, ITU Grid, CH. 38, 1546.92 nm, Analog, SC/APC	4022938.38
DWDM, ITU Grid, CH. 39, 1546.12 nm, Analog, SC/APC	4022938.39
DWDM, ITU Grid, CH. 40, 1545.32 nm, Analog, SC/APC	4022938.40
DWDM, ITU Grid, CH. 41, 1544.53 nm, Analog, SC/APC	4022938.41
DWDM, ITU Grid, CH. 42, 1543.73 nm, Analog, SC/APC	4022938.42
DWDM, ITU Grid, CH. 43, 1542.94 nm, Analog, SC/APC	4022938.43
DWDM, ITU Grid, CH. 44, 1542.14 nm, Analog, SC/APC	4022938.44
DWDM, ITU Grid, CH. 45, 1541.35 nm, Analog, SC/APC	4022938.45
DWDM, ITU Grid, CH. 46, 1540.56 nm, Analog, SC/APC	4022938.46
DWDM, ITU Grid, CH. 47, 1539.77 nm, Analog, SC/APC	4022938.47
DWDM, ITU Grid, CH. 48, 1538.98 nm, Analog, SC/APC	4022938.48
DWDM, ITU Grid, CH. 49, 1538.19 nm, Analog, SC/APC	4022938.49
DWDM, ITU Grid, CH. 50, 1537.40 nm, Analog, SC/APC	4022938.50
DWDM, ITU Grid, CH. 51, 1536.61 nm, Analog, SC/APC	4022938.51
DWDM, ITU Grid, CH. 52, 1535.82 nm, Analog, SC/APC	4022938.52
DWDM, ITU Grid, CH. 53, 1535.04 nm, Analog, SC/APC	4022938.53
DWDM, ITU Grid, CH. 54, 1534.25 nm, Analog, SC/APC	4022938.54
DWDM, ITU Grid, CH. 55, 1533.47 nm, Analog, SC/APC	4022938.55
DWDM, ITU Grid, CH. 56, 1532.68 nm, Analog, SC/APC	4022938.56
DWDM, ITU Grid, CH. 57, 1531.90 nm, Analog, SC/APC	4022938.57
DWDM, ITU Grid, CH. 58, 1531.12 nm, Analog, SC/APC	4022938.58
DWDM, ITU Grid, CH. 59, 1530.33 nm, Analog, SC/APC	4022938.59
