

# Cisco SocialMiner 10.0

## Product Overview

The Cisco SocialMiner<sup>®</sup> social media customer care solution can enable your company to proactively respond to customers and prospects communicating through public social media networks such as Twitter and Facebook or other public forum or blogging sites. By providing social media monitoring, queuing, and workflow to organize customer posts on social media networks and delivering them to your customer care team, your company can respond to customers in real time through the same social network they use to communicate.

This innovative customer service capability is enabled by the Cisco SocialMiner solution, which searches multiple social networks to capture public customer postings and then organizes, filters, and prioritizes these postings and presents them to your customer care team for response. Your customer service representatives can respond to a customer service problem or reach out to new customers looking for information about your products or services.

## Business Value

Consider the dramatic growth of the social web. Using Twitter and Facebook and other social media, people worldwide are engaging in an increasing number of online conversations and interactions. Part of those conversations involves consumers talking about the companies with which they do business. Sometimes they say good things, and sometimes they complain. The question is: Are companies listening? And can enterprises respond to both the good and the not-so-good information coming from customers through social media?

Cisco SocialMiner customer care enables all companies to incorporate the capability to listen to and respond to customer conversations originating on the social web. This proactive response can benefit your company in numerous ways: from delighting customers with responses to concerns or questions, to managing a complaint or product problem that could potentially damage your brand. In addition, the social media web is full of potential customers asking for advice about a product or service. With Cisco SocialMiner software, your company can offer advice and product information to aid in decision making, create brand recognition, and possibly gain a new customer.

Cisco SocialMiner software can help your company enhance customer service, improve customer loyalty, add new customers, and protect your brand.

Table 1 lists the features and benefits of Cisco SocialMiner 10.0.

**Table 1.** Features and Benefits of Cisco SocialMiner 10.0

Feature	Benefits
<b>Product Baseline Features</b>	
<b>Social media feeds</b>	<ul style="list-style-type: none"> <li>• Feeds are configurable sources to capture public social contacts that contain specific words, terms, or phrases</li> <li>• Feeds enable you to collect various types of contacts about your company's products, services, or areas of expertise</li> <li>• The Cisco SocialMiner solution supports the following types of feeds: <ul style="list-style-type: none"> <li>◦ Really Simple Syndication (RSS)</li> <li>◦ Facebook</li> <li>◦ Twitter</li> <li>◦ Push</li> <li>◦ Chat</li> </ul> </li> </ul>

Feature	Benefits
