

Cisco Personal Multiparty

PERSONALIZED, HIGH-QUALITY MULTIPARTY VIDEO COLLABORATION

Overview

Bring people to work together face-to-face – from anywhere. Cisco® Personal Multiparty makes video collaboration as easy as making a phone call. Perfect for midsize organizations or large corporations, Cisco Personal Multiparty lets you extend your Cisco Unified Communications Manager deployment to include multiparty collaboration. You can bring up to four parties together in meetings with high-quality, high-definition (HD) video, audio, and content sharing. Whether they are working on a desktop or on a mobile device, attendees can join a meeting from any location.

Figure 1. Cisco Personal Multiparty

Cisco Personal Multiparty is available within the Cisco Unified Workspace Licensing (Cisco UWL) Professional package, or through a-la-carte licensing. For each license selected, one named host is entitled to host multiparty meetings with up to three more parties, using a personalized contact address.

Personal Multiparty lets you set up impromptu meetings from devices such as Jabber® platform-enabled mobile and desktop solutions. You can provide every user with a dedicated personal conference address, making it easy to set up future meetings and protect access with a personal identification number (PIN). These capabilities are also available when using the product in Screen License mode.

Table 1 illustrates Cisco Personal Multiparty features, compared with features offered by the Cisco TelePresence® Server standard screen-based licensing model.

Table 1. Features of Cisco Personal Multiparty

Feature and Function	Personal Multiparty (New)	Screen License Model (Existing)
Tied to a named host	Yes	No
Minimum order	50 host licenses	None
Restricted conference size	4 connections	Unrestricted
Number of conference IDs per named host	1	Unrestricted
Requirement that host be present in the conference	Yes	Configurable
Maximum resolution	720p30 (HD)	Unrestricted (currently 1080p30)
Support for ad-hoc escalation from Cisco Unified Communications Manager (UCM)	Yes	Yes
Conductor load balancing	User-based licensing only	Support for port- or user-based licensing

When it's time to grow, simply add licenses to support new users. Personal Multiparty is enabled by Cisco TelePresence Server and Cisco TelePresence Conductor. Both of these products are available as virtualized solutions that can be deployed on Cisco Unified Computing System™ (Cisco UCS®) servers or specifications-based third-party platforms. You can also install Cisco TelePresence Server on dedicated hardware. It can be deployed as an entry-level solution on the Cisco Multiparty Media 310 and Multiparty Media 320 appliances. Or use the Cisco TelePresence Server MSE 8710 chassis-based platform for larger deployments. Each of these platforms can be scaled easily as user numbers grow by simply increasing your server capacity.

To make the most of your investment, you can complement your Personal Multiparty license package with powerful options. Add support for larger shared conferences, multiscreen systems, assured scheduling with Cisco TelePresence Management Suite (TMS), automated provisioning, or full HD experience options.

Features

- A named host, four-party license for multiparty video and audio with content sharing.
- The solution offers flexible service levels up to HD 720p30.
- You can easily add participants during a meeting.
- Personal conference address lets you set up future meetings.
- Cisco Personal Multiparty is enabled by Cisco TelePresence Server and Cisco TelePresence Conductor.

Benefits

- Empower your entire organization to work together face-to-face with multiparty video.
- Be more productive; make better decisions faster; and innovate with video, audio, and content sharing tools.
- Participate in planned meetings or collaborate in impromptu sessions as and when you need to.
- Personalize and secure the experience with customized profiles and PINs.
