Collaboration: Cisco Strategic Direction

What Are We Discussing Today?

- 1. Session Management Edition**
- 2. Intercompany Media Engine**
- 3. Customer Collaboration**

Session Management

Today's Communications Network Challenges

High PSTN Costs

- Expensive
- Limited Features

Network Complexities

- Redundant
- Expensive
- Complex
- Inflexible
- Inefficient

Users Demand New Collaboration Services

- Mobile, dispersed workforce
- Users acclimated to social networking

Cisco Unified Border Element and Session Management Edition

- Bridging and extending the communications network to connect users, applications, and systems globally
- Value Proposition
 - Lower total cost of ownership
 - Reduce network complexity
 - Increase workforce productivity and business agility
 - Changing business process, workforce practices, and information use
 - Modernize infrastructure at your own pace

Three Simple Steps

Save

by Efficiently
Interconnecting
networks

Simplify

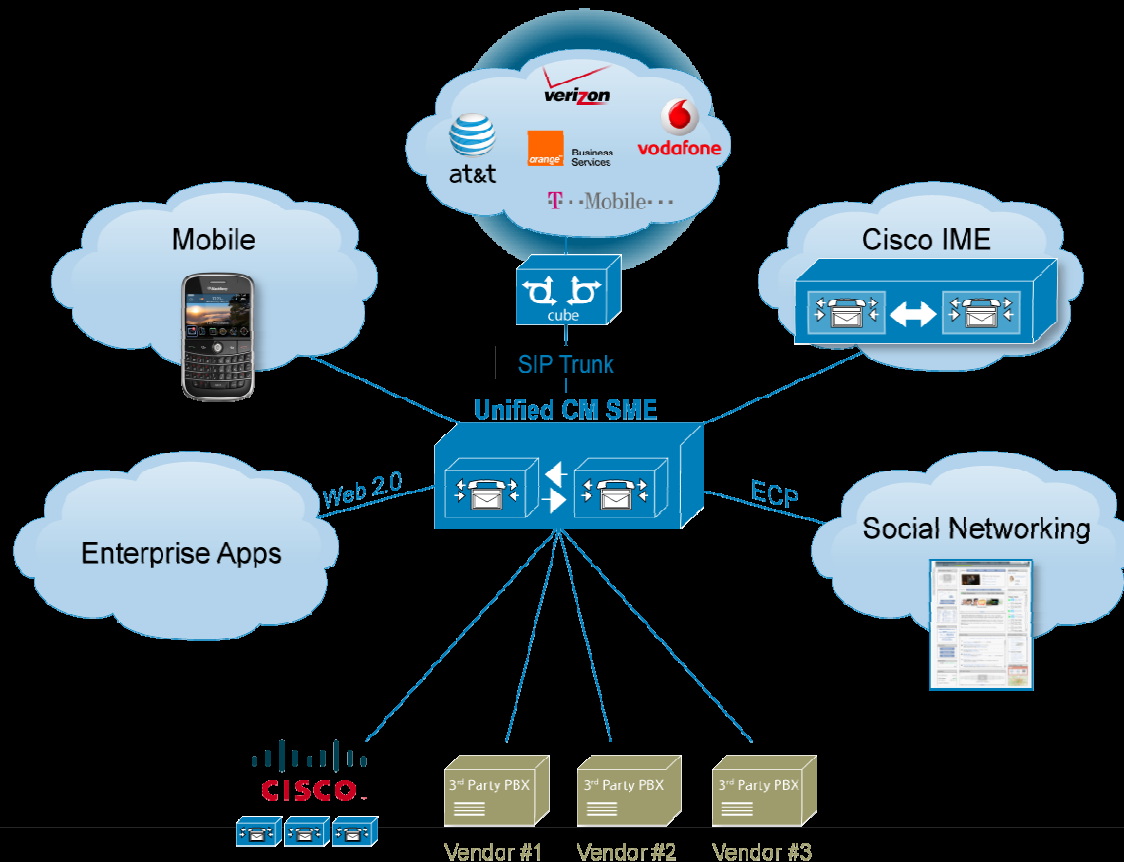

by Streamlining
Services
Aggregation

Extend

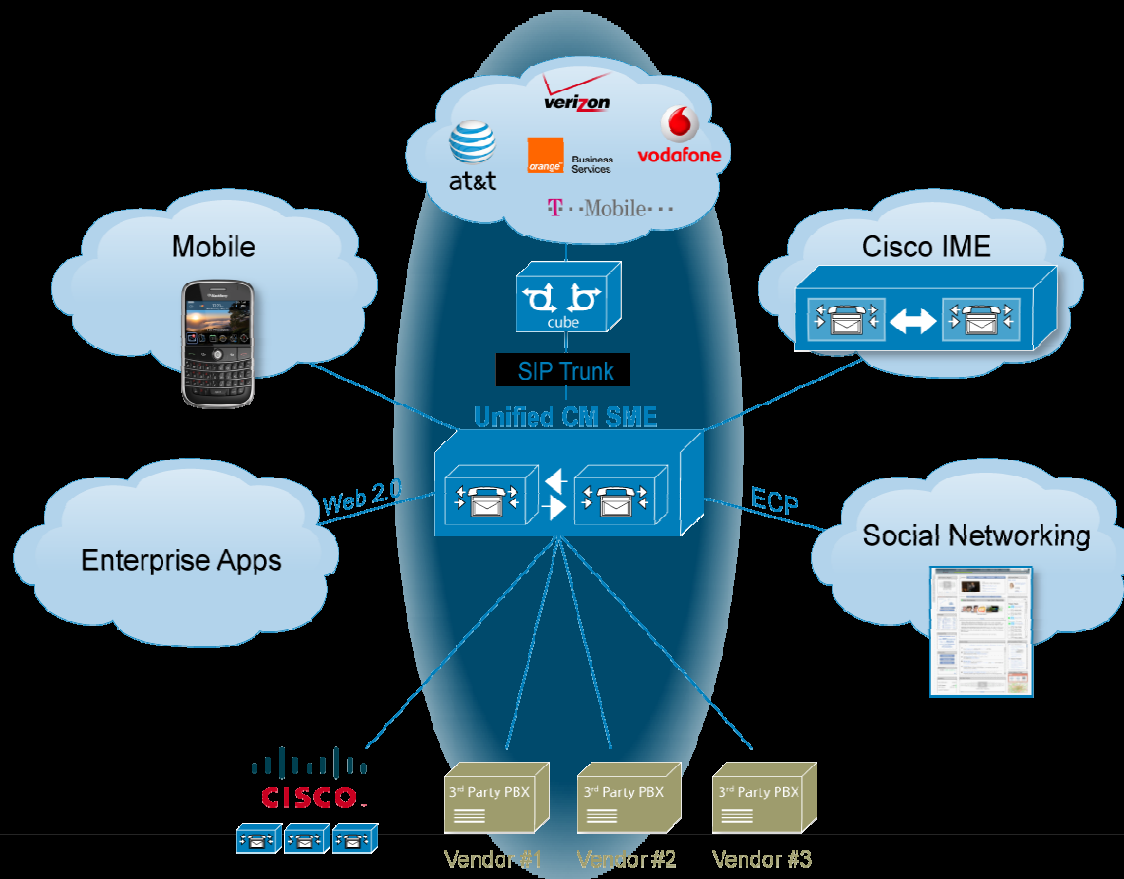

by Bridging
Collaborative
Services Globally

Step 1: Save Money by Efficiently Interconnecting Networks

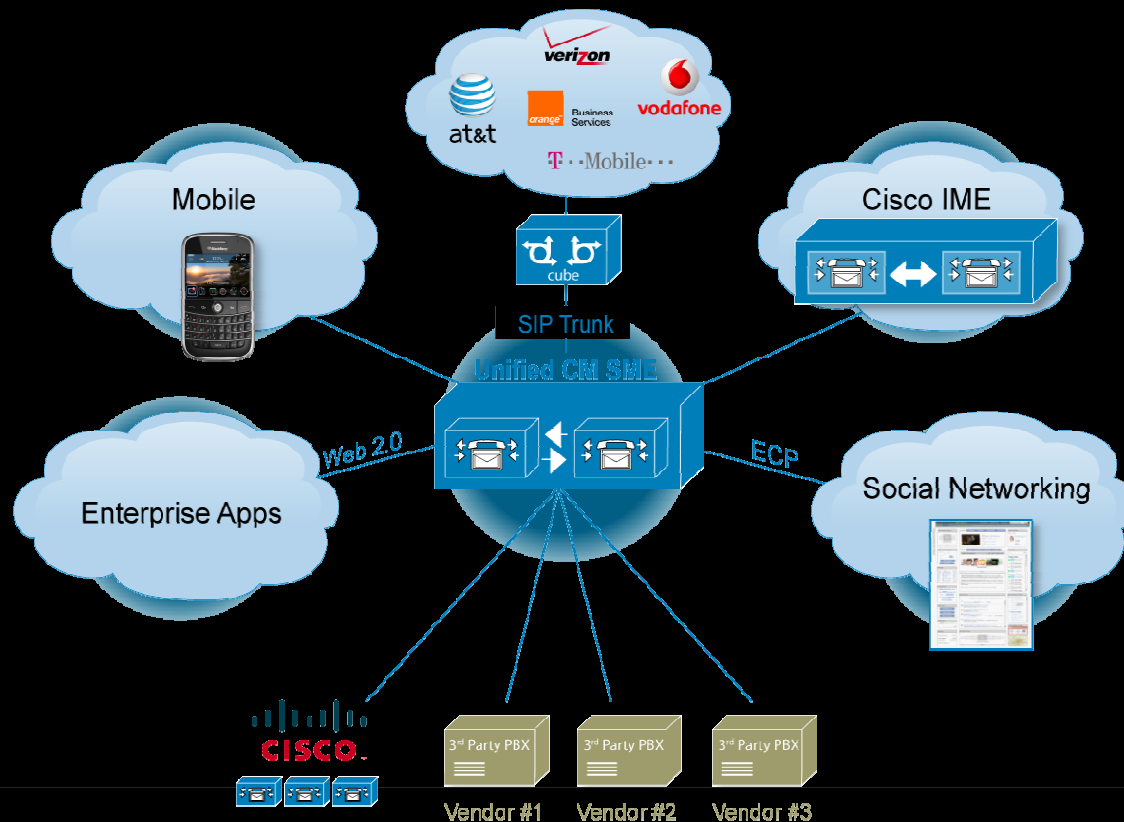

- SIP Trunking
- Contact Center trunking
- Application interconnects
- Security
- Multifunction (WAN & SBC)
- Device consolidation
- Device re-use
- Noise Cancellation

Step 2: Simplify by Streamlining Services Aggregation

- Centralized SIP trunking
- Simplified global dial plan
- Improved interoperability
- Eased migration from TDM to UC

Step 3: Extend Rich Collaboration Applications

- Applications deployed centrally and used globally
- Multivendor PBXs can use centrally deployed applications
- Rich collaborative applications deployed at the network core
- TelePresence, Noise cancellation
- B2B Collaboration

Intercompany Media Engine

Current State for UC: Islands of Productivity Interconnected by the PSTN

Company A

Inside
the
Organization:

- Voice
- Video
- Wideband Audio
- Rich Caller ID
- Presence
- Alert on Available

Current State for UC: Islands of Productivity Interconnected by the PSTN

Company A

Company B

Between
Organizations:

- Video
- Voice **ONLY**
- Wideband Audio
- Rich Caller ID
- Presence
- Alert on Available

Cisco Intercompany Media Engine

The Cisco Intercompany Media Engine (IME) represents the first time that companies can dynamically conduct **secure**, high-quality, voice and video telephone calls across the internet - using their **existing telephone numbers** - without the need to re-provision or replace currently deployed infrastructure.

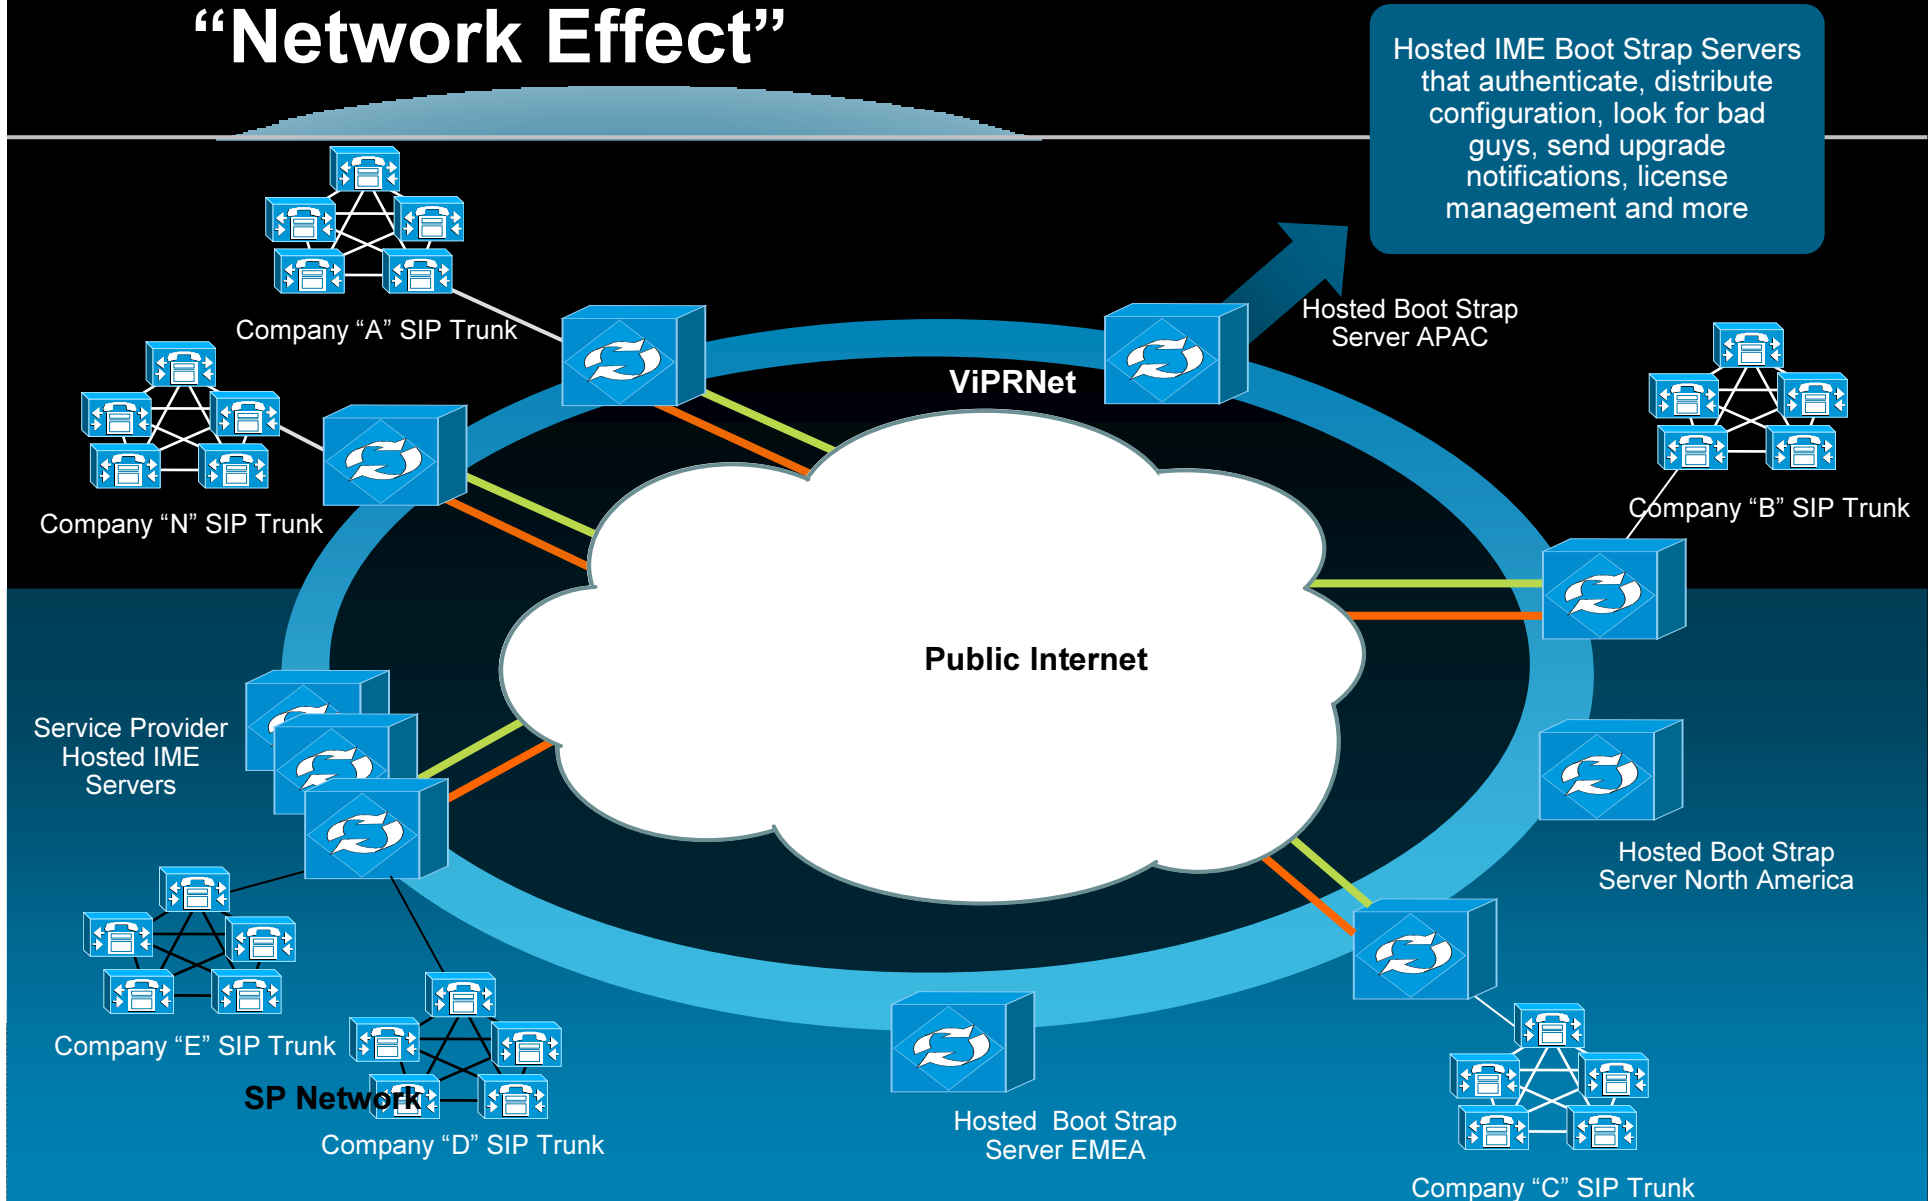

Cisco Intercompany Media Engine

Intercompany Boundary-Less Communications Among Business Partners and Customers

- Submitted to IETF: Accelerating business value through standardization
- Enterprise video telephony and high fidelity wideband audio across companies
- Enables innovative collaboration capabilities and applications to be shared among partners
- Secure, efficient network utilization with reduced costs
 - Utilizes SIP and PSTN coexistence
 - Multiple levels of security plus voice spam blocking
 - Whitelisting and blacklisting of registered numbers
- Effortless for users and administrators
 - Easy to use: Self learning
 - Consistent user experience

Enabling a Collaboration “Network Effect”

From Contact Centers to Customer Collaboration

- **Collaboration Agent Desktop**

**Media Capture
and Processing**

Enterprise Experts

**Video-enabled
Customer Care**

Collaboration Agent Desktop

The screenshot displays the Collaboration Agent Desktop interface. At the top, the agent's status is 'Agent CD' and 'Ready'. A 'Log Out' button is in the top right. Below the status bar, there are tabs for 'Home' and 'Manage Call', and a 'Make a Call' button with a phone icon. The main area is divided into two sections: 'Active' and 'On Hold'. The 'Active' section shows a call with Line: 000987, Active Name: 408-567-8901, and a duration of 45:12. The 'On Hold' section shows two calls: Line: 000123, Held Caller One, 781-555-0112, and Line: 000456, Held Caller Two, 781-555-0112. Below these sections is a 'Phone Queues' table showing the number of calls in queue and the longest time in queue for various queues. At the bottom is a 'My Stats' section showing performance metrics for the agent, team, and company goal.

Collaboration Desktop for Agents

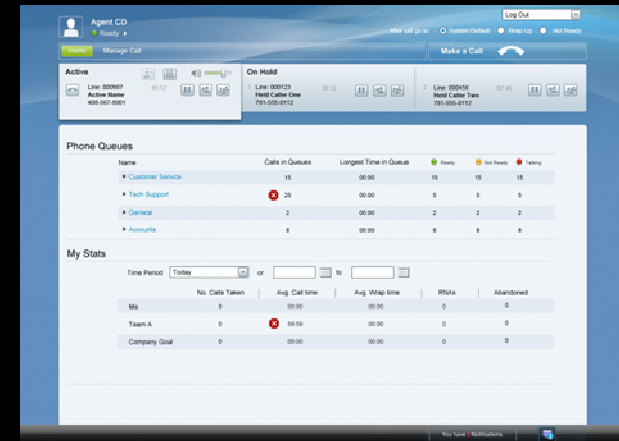

Optimizing the Agent Experience

Overview

- Web 2.0 SDK for Unified Contact Center Enterprise and Express
- Thin Client Agent Desktop built using industry standards

Features

- Open Source to lower the cost of customization
- Compliant with OpenSocial Gadget standard
- Web SDK is common to CCE and CCX – apps using the SDK will work on either platform
- Chat and Presence via Cisco Unified Presence
- Seamless integration with Cisco Media Capture Platform, Cisco Unified Intelligence Center, and Customer Collaboration Platform, and Cisco Quad

Network Media Capture

Ubiquitous Recording (Audio, Video, Screen)
Web 2.0 Client Application APIs
Load Balancing and High availability
Real-time recording controls
Network-based Media Forking
SAN Integration

Network Media Capture (Recording)

Social Customer Engagement

Social Media Customer Care

Overview

- Enable proactive customer service by queuing and assigning customer posts to appropriate staff
- Complement brand monitoring dashboards

Features

- Social media campaign management
- Route and queue contacts to experts
- Social Screen Pop
- Conversation history for social media and traditional care channels
- Social media care metrics
- Optional Integration with full suite of Cisco Collaboration Tools: Quad, Show and Share, Pulse

Summary

Business today requires a new collaborative workplace

Cisco is enabling new collaboration experiences that connect people, information, and teams with context...

- **Within and between companies**
- **Within and between devices, applications, networks**

Cisco's open, interoperable architecture enables customers to accelerate team performance and innovation, while maximizing IT Investments and consumption models
